For Laser systems, namely, pulsed fiber lasers, high power fiber lasers and high frequency selective fiber lasers all for non-medical purposes; fiber amplifiers, namely, optical fibre amplifiers; laser engine, namely, laser-diode-pumped fiber amplifiers, and arrays being structural parts of fiber amplifiers; power amplifier, namely, optical fiber amplifier module for high peak power and high average power applications; master oscillator with programmable amplitude waveform (MOPAW) lasers, not for medical use; optical character recognition systems comprised of optical character recognition sensors and apparatus;

imaging systems, namely, road sign recognition apparatus being an optical reader with image processor, advanced microscopy system comprised of microscope, microscope objective, illuminator being a microscope illuminating device, camera and image data processor, and electrical controller and electronic controller for controlling operation of advanced microscopy system, Optical Coherence Tomography (OCT) microscope, confocal microscope FLIM and FLIM FRET microscope, fluorescence microscope; micro-electro mechanical systems (MEMS) comprised of pressure sensors, inertia sensors, flow switches for monitoring and controlling the flow of gases or liquids, and optical switches being electrical switches; specialty optical fibers, namely, high attenuation optical fibers for connector-type and patch cord-type attenuator assembly; specialty optical fibers, namely, fiber optic chemical sensors; specialty optical fibers, namely, rare-earth-doped optical fibers for broadband ASE sources, optical amplification and laser source assembly; specialty optical fibers, namely, photosensitive optical fibers for grating fabrication; specialty optical fibers, namely, optical fibers and tapered fibers for fiber amplifier and laser assembly; specialty optical fibers, namely microstructure optical fibers for supercontinuum generation, wave mixing, self-phase modulation, high power delivery systems, sensors and interferometry; specialty optical fibers, namely, silica fibers, fluoride, telluride and phosphate fibers for differential scanning colorimetry, spectrophotometry, laser sensors, broadband ASE source and optical amplifiers; diffractive optical elements, namely, computer generated holograms apparatus and holographic optical elements in the nature of diffractive lenses and micro lens arrays, parabolic gratings and anti-reflection gratings; vision systems comprised of a wood inspection apparatus in the nature of a spectral analysis sensor, line scan cameras, lighting source being light bulb, data processor, and electric controller and electronic controllers for controlling operation of wood inspection apparatus, and recorded software for wood knot, rot and sap detection and color classification for wood planks, for use therewith, sold as a unit; shape and colour analysing apparatus for classification of beverage and food containers; quality control apparatus for classification of containers, namely, object shape and texture recognition sensors; quality control apparatus for identification of plastics, namely, laser detectors for color sensing; optical correlators, namely, artificial optical inspection apparatus for industrial use, verification and authentication, video processing and other applications; micro-components for optical use, namely, optical micro-mirrors and optical fiber filters; variable reflectivity mirrors and laser rut measurement systems for optical use comprised of laser optical profilers, custom optics and high-power pulsed laser line sources being optical lenses and laser equipment for non-medical purposes, data processor and recorded software for detecting and characterizing pavement ruts, for use therewith, sold as a unit; 3-D laser profiler detectors for surface inspection and mapping; 360-degree laser optical profiler; optical systems comprised of line laser mini beam projector, collection fiber optics, high frame rate camera, and digital signal processor for optical testing collection fiber optics, high frame rate camera, and digital signal processor, for optical testing; optical devices and components, namely, optical mirrors and optical filters; photonic materials and processes, namely, un-cooled infrared (IR) bolometric detectors, IR lenses, THz lenses, silicon photonic packaging being optical couplers for arrays of optical fibers, miniaturized IR camera, micro-mirrors being components of video projectors, multi-spectral camera, and hyperspectral camera; 3-D imaging systems, not for medical use, comprised of range-resolved image capture device being a camera and data processor, and illumination source being light-emitting diode sources; 3D laser sensors for distance measurement on remote targets; optical correlators being optical devices for target tracking and identification of objects; microdevices, namely, micromirrors being components for video projectors and all-fibre optical filters; variable reflectivity mirrors for use in optics; rut meters being optical meters; 3D sensors, namely, 3D optical sensors for laser profile metering not for medical use; light detection and ranging apparatus in the nature of a lidar apparatus, namely, spectroscopic light detection and ranging lidar systems comprised of light-emitting diode sources, gratings and prisms, and optical detectors for detection of aerosol, gas, biological, and chemical agents and sizing lighting system to optimize

photosynthesis; cameras for algae growth computer vision systems, namely, IR cameras, terahertz cameras, near IR cameras and hyperspectral cameras; Printed photonics devices, namely, printed photonic sensors for physical, chemical and biological sensing; spectroscopic light detection and ranging apparatus being a lidar apparatus, namely, raman lidar apparatus and fluorescence lidar apparatus, synthetic aperture lidar apparatus and synthetic aperture radar apparatus; silicon photonics and chip packages for optical use, namely, metallic and ceramic vacuum and controlled atmosphere and pressure packages for microelectromechanical systems (MEMS) in the nature of arrays of infrared microbolometric detectors; video and photographic projectors, namely, dynamic and static scene projectors; video and photographic projectors for testing of missile seekers and targeting pods; projectors being computer hardware and recorded software systems for testing of equipment in the hardware-in-the-loop configuration; projectors being computer hardware and recorded software systems for training of personnel in the virtual environment; video and photographic projectors for training of autonomous vehicles in all environments; passive imagers being passive infrared detectors, namely, IR imagers making use o micro-bolometric detectors; active imagers, namely, imagers making use of micro-bolometric detectors in the nature of thermal imaging cameras; see-through imagers, namely, active and passive see-through imagers in the nature of thermal imaging cameras; imager modules being component parts of thermal imaging cameras, namely, imager modules equipped with bolometric detectors; fast imaging optics in the nature of infrared cameras, namely, optics working in wavelength range; beam forming optics, namely, optical elements for beam shaping in the nature optical mirrors; tracking infrared illuminators, namely, instruments consisting of cameras for target acquisition, radiation sources for target illumination and control units; micro-scan imagers in the nature of millimeter wave equipment for detecting concealed objects, namely, vis-mmw imagers applying micro-scan technique for high-resolution imaging; micro-scanned optics being thermal cameras, namely, optics with the implemented micro-scan mechanism; specialty optical microscopes; optical systems comprised of lasers not for medical use, high-precision optical lenses, imagers being scanners and data processor, namely, equipment for optical tests including focal measurement, measurement of beam quality, spectrophotometry, colorimetry, being profile meters, scanning electron microscopes, digital interferometers, spectrometers, scattering meters and atomic force microscopes; optical components and devices, namely, optical mirrors and optical device filters; photonic materials and processes, namely, non-cooled infrared (IR) bolometric detectors, IR cameras and micromirrors being components of thermal imaging systems

International Classes 9 - Primary Classes **US Classes** 21, 23, 26, 36, 38 **International Class Title** Electrical and Scientific Apparatus

For Custom manufacture of laser systems, namely, vision systems being night vision systems, optical systems being optical positioning apparatus for industrial applications, optical devices and components being optical mirrors, optical switches, optical attenuators and optical sensors, and photonic materials and processes being un-cooled infrared (IR) bolometric detectors, IR lenses, near IR camera, silicon photonic packaging, miniaturized IR cameras, micro-mirrors, optical modulators, bolometric focal plane arrays, phase masks and optical thin film coatings, in compliance with clients' specifications; custom manufacturing of optical systems and components; custom manufacture of printed photonics devices; foundry service, namely custom manufacturing of MEMS devices in the nature of micro-bolometric detectors, pressure sensors, accelerometers, and resonators, deposition and MEMS devices for patterning of thin films and coatings; MEMS foundry services namely custom manufacture of microelectromechanical systems and devices

International Classes 40 - Primary Classes **US Classes** 100, 103, 106 **International Class Title** Material Treatment

For Environmental testing and inspection services; product research and development services in optics and photonics and imaging; design for others of laser systems, vision systems in the nature of night vision systems, optical systems in the nature of optical positioning apparatus for industrial applications, optical devices and components in the nature of optical mirrors, optical switches, optical attenuators and optical sensors, optomechanical fixtures and mounts, photonic materials and processes in the nature of un-cooled infrared (IR) bolometric detectors, miniaturized lR cameras, micro-mirrors, optical modulators, bolometric focal plane arrays, phase masks and optical thin film coat; Product development of microelectromechanical systems and devices for use in MEMS foundry industry

MARK INFORMATION

Standard Character Claim No **Mark Drawing Type** 3 - AN ILLUSTRATION DRAWING WHICH INCLUDES WORD(S)/ LETTER(S) **Description of the Mark** The mark consists of a cream rectangular chocolate bar in vertical form. The bar is divided into five sections by four horizontal lines. The first, third, and fifth sections have a circle on it with tiny dots, all in cream. The second and fourth sections contain a quadrilateral with the wording "CONFETTERIA" in it above the wording "RAFFAELLO" followed by a curved line, all in cream. A white rectangle with red sides is superimposed over the center of the chocolate bar. At the top of the white rectangle is a red quadrilateral with a grey shadow above the stylized red wording "RAFFAELLO" outlined in grey. Below the wording is a grey curved line. At the bottom of the white rectangle is a cream piece of chocolate in square form. In front and to the side of the chocolate are five pieces of cream almonds and a swirl of cream chocolate. Behind the chocolate are three green leaves, a red and yellow flower, and a white coconut outlined in brown. A cream color appears underneath the chocolate, almonds, flowers, leaves, and coconut. **Color Drawing** Yes **Color Claimed** The color(s) white, red, grey, yellow, green, cream and brown is/are claimed as a feature of the mark. **Disclaimer** THE PICTORIAL REPRESENTATION OF CHOCOLATE CANDY, ALMONDS, COCONUT, AND "CONFETTERIA" **Translation** The English translation of the word "CONFETTERIA" in the mark is "candy shop"
