Subject: USPTO interim guidelines request for comment

There is no reason to continue to allow patenting of software. The
vast majority of developers are against them for the reason that they
impede progress and innovation. The only ones that are for them are
a few individuals and corporations that do neither and exist only to tie
up the legal system.

Software patents make development a legal nightmare.

Please consider this and all other messages against software patents
and make a change for a better world.

Thank you.
