The new laws further harmonizes the US with other countries.

Overall WIPO is doing a great job with what they are allowed to do. Instead of always complaining about IP laws, go create your own IP to help the world, not just your pocket book.

Consider one patent office for the entire world. E.G.: Pat applicants could check the PCT pat application form box for software or business method patents which would only apply to the US market.

We pay too much for filing pat applications into 75 or more countries.

I have countless complicated suggestions.

Thank you!
