Subject: Comments on PTDL Services

To Whom It May Concern,

We would like to comment on the two systems that are available at PTDLs:

1) PubWEST. PubWEST is an unique tool for researchers. The capability of searching for older patents and cross database searching made it very effective. The newly added downloading feature is very helpful as well. Some improvements can be made, such as adding more fields, and multiple inventors name for downloading, etc.

2) CASSIS. It is used often here on campus. Its unique feature for searching and downloading data have helped many researchers for their projects. Please keep supporting the system. Suggestions: cleaner data downloading.

Thanks,

Lisha Li
