Thank you for your interest in gathering PTAB AIA Review and Trial data in bulk format. In response to increasing interest in capturing public data, the USPTO has provided an API (Application Program Interface) that will accommodate bulk data retrieval. You can find this source at the following website:

- https://developer.uspto.gov/

Effective July 13, 2016 there will be an API Catalog link, towards the bottom of the page, which includes a tile for PTAB. There you will find API framework specific code structure, a view within the API site, and the API documentation supporting how to capture bulk data (sample below).

If you are having trouble with getting to the data, please feel free to contact the support staff through the "Contact Us" link on the top right hand corner on the API homepage. Additional material describing the USPTO open data initiative can be found below:
