## **U.S. Department of Commerce Privacy Impact Assessment USPTO Information Dissemination Support System**

**Unique Project Identifier: PTOD-001-00**

### **Introduction: System Description**

*(a) a general description of the information in the system*

Information Dissemination Support System (IDSS) is a Major Application (MA) that supports the Trademark and Electronic Government Business Division, the Corporate Systems Division (CSD), the Patent Search System Division, the Office of Electronic Information Products, and the Office of Public Information Services. IDSS provides automated support for the timely search and retrieval of electronic text and images concerning patent applications and patents by USPTO internal and external users. IDSS handles current and historical data for patent and trademark applications, whether assigned, certified, issued, or not.

IDSS implements a large, distributed and complex computing environment and each of its automated information systems (AIS) physically reside on a collection of hardware and software components, and services, with various interfaces. The system uses the USPTO's network infrastructure to allow interaction between its subordinate information systems.

Pair Bulk Data (PBD) also known as Patent Examination Data System (PEDS) is a new platform in Amazon Web Services GovCloud to provide bulk download of Public PAIR bibliographic data in a secure manner without impacting USPTO internal users. PEDS is part of the US Patent and Trademark Office's (USPTO) commitment to fostering a culture of open government as described by the 2013 Executive Order to make open and machine-readable data the new default for government information. PEDS lets customers retrieve and download multiple records of USPTO patent application or patent filing status at no cost. PEDS contains the bibliographic, published document and patent term extension data tabs in Public PAIR from 1981 to present. There is also some data dating back to 1910.

*(b) a description of a typical transaction conducted on the system*

Internal and external users request patent information using the IDSS system via a search. The data is then disseminated to the requestor.

PBD (PEDS) the solution will provide each external customer ability to to perform below functions: Search Patent records, Download PAIR records (bibliographic data) in bulk, Download complete PAIR Database (bibliographic data) in bulk, Preview the

data that could be download, The Patent Data is segregated into 7 different tabs as displayed in Public PAIR, Manage the volume of data that can be downloaded in a given bundle.

*(c) any information sharing conducted by the system*

IDSS does conduct public information sharing of search and retrieval of electronic texts, and images concerning Patent Applications and Patents by USPTO internal and external users

*(d) a citation of the legal authority to collect PII and/or BII*

The *citation of the legal authority to collect PII and/or BII* is 5 U.S.C. 301, 35 U.S.C. 2, and E.O.12862.

*(e) the Federal Information Processing Standard (FIPS) 199 security impact category for the system*

IDSS is considered a business-essential system with a Federal Information Processing Standard (FIPS) 199 security categorization of Moderate.

## 8.2 Provide a general description of the technologies used to protect PII/BII on the IT system.

The information is in accordance with the NIST 800-53, Revision 4 control set. Security Assessment and Authorization activities are routinely conducted for IDSS. Secured technical architecture is incorporated into the system to prevent any unauthorized access to pending cases. Data is maintained in areas accessible only to authorize personnel and systems are password protected.

## Management Controls:

1. The USPTO uses the Life Cycle review process to ensure that management controls are in place for IDSS. During the enhancement of any component, the security controls are reviewed, re-evaluated, and updated in the Security Plan. The Security Plans specifically address the management, operational and technical controls that are in place, and planned, during the operation of the enhanced system. Additional management controls include performing national agency check on all personnel, including contractor staff.

2. The USPTO Personally Identifiable Data Extracts Policy

## Operational Controls:

1. Automated operational controls include securing all hardware associated with IDSS in the USPTO Data Center. The Data Center is controlled by access card entry, and is manned by a uniformed guard service to restrict access to the servers, their Operating Systems and databases. Contingency planning has been prepared for the data. Backups are performed on the processing databases. Backups are stored on tape and are secured off-site. Additional operation controls include: (1) Logical edit checks to ensure proper sequence of actions; (2) Physical terminal identification; (3) Database UserID; (4) Restricted data display, as required; and (5) Restricted access.
2. Manual procedures shall be followed for handling extracted data containing sensitive PII which is physically transported outside of the USPTO premises. In order to remove data extracts containing sensitive PII from USPTO premises, users must:
  - a. Maintain a centralized office log for extracted datasets that contain sensitive PII. This log must include the date the data was extracted and removed from the facilities, a description of the data extracted, the purpose of the extract, the expected date of disposal or return, and the actual date of return or deletion.
  - b. Ensure that any extract which is no longer needed is returned to USPTO premises or securely erased, and that this activity is recorded on the log.
  - c. Obtain management concurrence in the log, if an extract aged over 90 days is still required.

- d. Store all PII data extracts maintained on an USPTO laptop in the encrypted My Documents directory. This includes any sensitive PII data extracts downloaded via the USPTO Virtual Private network (VPN).
- e. Encrypt and password-protect all sensitive PII data extracts maintained on a portable storage device (such as CD, memory key, flash drive, etc.). Exceptions due to technical limitations must have the approval of the Office Director and alternative protective measures must be in place prior to removal from USPTO premises.

USPTO has not developed a centralized logging system for PII data extracts. Such a system would track the following categories of information:

- a. Who performed the extract,
- b. When extract was done,
- c. What was the extract,
- d. Where was the extract taken from,
- e. Has the extract been deleted and,
- f. If not deleted after 90 days, to monitor that it is still needed in 90 day intervals.

Until a system is implemented, USPTO is using the following compensating controls to protect PII data:

- a. No extracts of sensitive data may be copied on to portable media without a waiver approved by the DoC CIO. The request for a waiver must include specifics as to how the data and device are protected, how long the data will be maintained, and how the data on the device will be deleted when no longer required.
- b. All laptop computers allowed to store sensitive data must have full disk encryption.
- c. All remote access to public USPTO systems containing sensitive data must be encrypted. All remote access to internal USPTO systems containing sensitive data must fully comply with DoC Remote Access Policy requirements.
- d. All flexiplace/telework agreements for working off site require that adequate data protection be in place.

Encrypt and password-protect prior to transmission any sensitive PII data extracts that are sent to an external e-mail address via the Internet. The password key should be forwarded to the recipient in a separate e-mail from the attached file.

**Section 9: Privacy Act**
