

How do patents help improve global lives? Through determined innovators making a difference.

Patents for Humanity is the USPTO's awards program for those using game-changing technology to solve global challenges. It provides business incentives for patent holders who find ways to reach under-served communities.

These success stories can help others learn how to [harness innovation for human progress](#).

All patent holders can participate

Since 2012, the program has given 21 awards — not just to multinational companies, but also small and medium enterprises, startups, universities, and nonprofits. Together, their work has improved millions of lives around the globe.

Winners receive accelerated USPTO processing for one eligible matter and public recognition of their work.

Innovations such as:

- Better ways to diagnose and treat HIV, malaria, tuberculosis, and other diseases
- Improved crops and better sources of nutrition
- Energy sources for those without a reliable electric grid
- Clean drinking water and safer sanitation
- And many others that improve living standards

Commercial markets and human progress can go hand in hand.
