Introduction: System Description

Provide a description of the system that addresses the following elements:

The response must be written in plain language and be as comprehensive as necessary to describe the system.

(a) a general description of the information in the system

RTIS PDD is an application information system that is designed to gather and disseminate all publicly available USPTO Patent & Trademark bulk data to the public. The system collects data from various USPTO source systems, packages it into appropriate file containers and delivers it via a public web site. RTIS hosts the PDD and is required to provide to the public, free of charge, bulk datasets provided by the USPTO and the Public PAIR bulk dataset compiled by RTIS. A portion of the PDD system is hosted on the FISMA certified section of the Microsoft Azure system.

(b) a description of a typical transaction conducted on the system

RTIS provides the retrieval and distribution of patent and trademark bulk data in essentially unaltered form, modified only as necessary to organize or compress the data for ease of distribution or for security purposes, from the USPTO to the public. Data dissemination is a continuous system and RTIS shall continuously monitor the datasets and shall retrieve and host updates and changes as they go forward. RTIS PDD uses a secure infrastructure, housed external to the USPTO, that performs collection and dissemination of all data to the public at no cost to the public or the USPTO. Such infrastructure may be distributed.

(c) any information sharing conducted by the system

A portion of the PDD system is hosted on the FISMA certified section of the Microsoft Azure system. The portion of the system residing on Azure hosts the most recent file sets, as they are the most downloaded files, and Azure provides the needed bandwidth to meet the needs of the USPTO's customers.

(d) a citation of the legal authority to collect PII and/or BII

The PDD contract requires patents applications to be kept in confidence, by law (35 U.S.C. 122). Note: any PII or BII is collected by the USPTO and subsequently provided to PDD, but is not collected by PDD itself.

*(e) the Federal Information Processing Standard (FIPS) 199 security impact category for the system is - **LOW**.*

Table 1-1 identify the security objective potential impact levels for confidentiality, integrity, and availability. The security impact levels are based on the potential impact definitions for each of the security objectives (i.e., confidentiality, integrity, and availability) discussed in NIST SP 800-60 and FIPS Pub 199.

Table 1-1 Information Type Processed by RTIS PDD and Azure Cloud Enhancement Systems

System Name	Information Type Name	Security Objective			Rationale for Selecting Security Categorization Levels
		Confidentiality	Integrity	Availability	
RTIS PDD	Official Information Dissemination	LOW	LOW	LOW	As NIST recommended.
	Intellectual Property Protection	LOW	LOW	LOW	As NIST recommended.
Azure Cloud Enhancement	Public Relations	LOW	LOW	LOW	NIST recommended.
	General Information	LOW	LOW	LOW	NIST recommended.
	Record Retention	LOW	LOW	LOW	NIST recommended.

Based on the information provided in Table 1-1, Information Types, for RTIS PDD Systems, the high water-mark security impact level for each of the three security objectives of confidentiality, integrity, and availability for RTIS PDD are identified in Table 1-2:

Table 1-2: Security Impact

Security Objective	Security Impact Level
Confidentiality	LOW
Integrity	LOW
Availability	LOW

Table 1-3 identifies security high water-mark categorization for the RTIS PDD's individual subsystems. The baseline set of security controls for each subsystem have been selected and applied in accordance with the high water-mark level for confidentiality, integrity, and availability assigned to that subsystem.

Table 1-3: Security Categorization for RTIS Subsystems

Subsystem Name	Security Categorization
RTIS PDD	LOW
RTIS Azure Cloud Enhancement	LOW

The entire RTIS PDD system has been categorized as having an impact level of Low based on the aggregate high water-mark derived from Table 1-3, as shown in Table 1-4 below.
