

As innovators strive to be exceptional in the production of new and useful Innovations ,a lot gets lost in the technical jargon. To many times innovators are discouraged and a lot gets lost with the lack of confidence in the conduct of solicitors and non innovators. Educational Institution have provided some Safe havens for innovators ,opinion and Trust still play a key role in innovations ability to achieve another level. Patent quality weighs heavily on the shoulders of the innovator. In order to improve patent quality I believe a panel of unbiased individuals would View the application ,report findings to an biased panel, then both reports critiqued by a final panel as none of the asset would be lost to discouragements not to encourage favoritism but to truly give a Fighting Chance to the dreamer . Ultimately not telling the inventor what to bo but to provide an outline to what's acceptable to move forward safely as imagination has fueled the economy for centuries . "Maby there's more to this" attitude. "Not sink or swim". Thanks for listening.
