USPTO Patent Search System – Primary Search and Retrieval (PSS-PS)  
System**

**Introduction: System Description**

*Provide a description of the system that addresses the following elements:*

*(a) a general description of the information in the system*

The PSS-PS master system has multiple Automated Information Systems with search and retrieval automation tools that support the USPTO Patent examiners legal determination of prior art of patent applications.

*(b) a description of a typical transaction conducted on the system*

**Application Image Retrieval System (AIRS)**

The purpose of AIRS is to provide patent application images and metadata to the following subsystems: Examiners Automated Search Tool (EAST), Hypertext Transfer Protocol Print Service (HPS), Order Entry Management System (OEMS) and the Web Examiner’s Search Tool (WEST).

**Application Images on the Web (AIW)**

AIW is an internet application that runs outside the USPTO firewall and provides an access point for public users to retrieve domestic patent application images. The purpose of AIW is to provide images and metadata to the Application Full-Text (AppFT) subsystem.

**The Patent Image Retrieval System (PIRS)**

The purpose of PIRS is to provide Patent images and metadata to the following subsystems: EAST, HPS, OEMS, and WEST.

**Patent Images on the Web (PIW)**

PIW is an internet application that runs outside the USPTO firewall and provides an access point for public users to retrieve domestic Patent images. The purpose of PIW is to provide images and metadata to the Patents Full-Text (PatFT) subsystem.

### **Web-based Examiner's Search Tool (WEST)**

WEST is a Web browser-based client interface, which utilizes HTTP as a front end to the Bibliographic Retrieval System (BRS) database system. It operates over the USPTO Transmission Control Protocol/Internet Protocol (TCP/IP) Intranet (PTONet). This intranet tool also supports text search capabilities and retrieval functions of abstracts, images, and full-text patent documents from other domestic, international, and commercial databases.

### **PubWEST**

PubWEST is the publicly-accessible version of WEST. PubWEST, similarly to WEST, provides search access to most USPTO patent text searchable databases.

### **Enterprise Text Search 1 (ETS1)**

The ETS1 system is a continuation of the BRS Middle-tier Phase 1 and BRS Middle-tier Phase 2 systems. ETS1 is a multi-tiered application that improves the scalability and the performance of the BRS search system while using fewer system resources.

### **Examiners Automated Search Tool (EAST)**

A single user interface that can be used to search for prior art of any type, this application integrates with other activities performed by patent examiners to reduce the time required to examine applications. EAST provides full text and abstract text data search and retrieval of domestic and international, commercial and government databases using the BRS search engine.

### **Public Examiners Automated Search Tool (PubEAST)**

This application is the publicly-available version of EAST. It provides search request capability for most USPTO patent text searchable databases to public users. It has full text search capabilities from the following databases: USPAT, USOCR, EPO, and JPO text/image databases.

### **Patent Linguistic Utility Search (PLUS)**

PLUS uses the BRS query by example technology to compare keywords in a patent application to keywords in published patent applications and granted patents. Search results include

matching patent and/or patent application numbers, and classification and sub-classification for patents matched, along with relevance ranking for the match.

### **European Patent Office Query System (EPOQUE)**

EPOQUE connects to the Trilateral Secure Virtual Private Network (TSVPN), part of the USPTO Trilateral Network (TriNet), to access and allow queries from US Patent Examiners and other users to the European Patent Office (EPO) at The Hague, Netherlands.

### **HTTP Print Service (HPS)**

HPS allows USPTO internal users and users in the public search rooms to print patent/publication application images to designated Windows-based group printers.

### **Applications Full-Text (AppFT)**

A standalone internet application that runs outside of the USPTO firewall and provides general public access to Pre-Grant, published patent applications. It connects to the PGPub/CSS application and AIW for images.

### **Patent Full Text on the Web (PATFT)**

A stand-alone Internet application, which allows the general public to search and retrieve granted US patents. It runs outside the USPTO firewall with a copy of the USPTO BRS database that is provided to USPTO examiners.

### **Classification Data System (CDS)**

CDS is a collection of applications and processes which support the capture and maintenance of patent and PGPub classification data of US documents as well as the maintenance of the USPC. CDS also supports the maintenance of the US-to-IPC Concordance and Limited Family data and is the data source of several classification publications.

### **Computer Search Systems (CSS)**

CSS is a set of databases, conversion and load software, data administration tools, and procedures to maintain and keep available a number of internal, external, government, and commercial databases for text search and retrieval via other USPTO applications.

### **Electronic Patent Reference (EPR)**

This is a single-user, client application that is downloaded on-demand from a Patent Application Information Retrieval (PAIR) server and installed on public personal computers. It provides patent references from PIW and AIW to applicants via the Private PAIR system.

*(c) any information sharing conducted by the system*

Data repositories allow information to be shared with internal stakeholders (e.g. patent examiners), and to the public.

*(d) a citation of the legal authority to collect PII and/or BII*

35 U.S.C. 1 and 115; 5 U.S.C. 301; 5 U.S.C. 301 and 35 U.S.C. 6, 42(c)

*(e) the Federal Information Processing Standard (FIPS) 199 security impact category for the system*

Information in USPTO information systems are protected with operational and technical controls that documented in the PSS-PS System Security Plan. A Security Categorization compliant with the FIPS 199 and NIST SP 800-60 requirements was conducted for PSS-PS. The overall FIPS 199 security impact level for PSS-PS was determined to be Moderate. This categorization influences the level of effort needed to protect the information managed and transmitted by the system.

A Operational controls include securing all hardware associated with the PSS-PS in the USPTO Data Center. The Data Center is controlled by access card entry and is manned by a uniformed guard service to restrict access to the servers, their operating systems, and databases.

B Backups are managed by the Enterprise Tape Backup System (ETBS) and are secured off-site by First Federal.

C Windows and Linux servers within PSS-PS are regularly updated with the latest security patches by the Windows and Unix System Support Groups.
