Subject: Proposed 41.37(r)

There is ambiguity in the proposed 41.37(r) with respect to "the page and line or paragraph". In an application where paragraph numbering is used, does the quoted language require **{page and paragraph}** or just **{paragraph}**?

Also, the portion that reads "appendix shall contain in boldface between the same braces ({}), where each limitation is shown in the drawings" is ambiguous. Does the quoted language require "**{paragraph and location in drawing}**" or "**{paragraph}{location in drawing}**"? In other words, does the "the same braces" indicate again the type of braces, or that all the information is included within a single set of braces?

All the best,
Mark
