Subject: Idaho- USPTO Satellite Office

The Idaho National Laboratory (INL) is a Department of Energy (DOE) multi-program national laboratory that conducts research and development in all DOE mission areas. Like all other federal laboratories INL has a statutory, technology transfer mission to make its capabilities and technologies available to all federal agencies, to state and local governments and to universities and industry.

Our key mission centers around Energy and the Environment, Nuclear Energy, and National and Homeland Security. I see potential synergies when we align the public, private and government sectors. Having the USPTO Satellite office in close proximity to the Idaho National Laboratory and our scientists could benefit the region, state of Idaho and INL. We would be pleased to welcome the USPTO Satellite office to Idaho.
