Re: Oregon satellite office for U.S. Patent and Trademarks

Dear Representative:

I currently have patent pending on an EV product I designed. I will be filing my patent application by April of this year and realize you won't have an office open by that time, but an office in the area would have made this process much easier to protect my interest in my design.

If the process is too difficult, or expensive, inventors may pass on protecting good ideas and may even discard producing a product that could be beneficial to creating jobs and stimulating our economy. If they don't protect them and the product ends up being produced in a foreign country, we have enhanced their position in the global marketplace. Protecting the ideas of America, may be as value as protecting our other national treasures.

The picture in this letter is of an all electric Jeep that was built based on work done on my invention. I hope you will make it easier for great ideas to become great products, protected by the United States.

**Fun,  
Fast,  
Affordable**  
*All-Electric Drive  
Systems for  
Kit Cars*

- Highway speeds & custom systems of 100+ mph
- 100-200 mile battery packs & expandable range
- Tube or VW pan style chassis available
- EV licensing as a kit car
