**CPC NOTICE OF CHANGES 1065**

**DATE:** MAY 1, 2021

**PROJECT MP0316**

| Type* | Symbol | Indent Level Number of dots (e.g. 0, 1, 2) | Title | Transferred to*
|-------|--------|------------------------------------------|-------|----------------
| M     | C08J9/36 | 1 | After-treatment (C08J 9/22 takes precedence) |
| M     | C08J11/00 | 0 | Recovery or working-up of waste materials (recovery of plastics B29B 17/00; polymerisation processes involving purification or recycling of waste polymers or their depolymerisation products C08B, C08C, C08F, C08G, C08H) |
| M     | C08J11/08 | 3 | using selective solvents for polymer components |
| M     | C08J11/10 | 2 | by chemically breaking down the molecular chains of polymers or breaking of crosslinks, e.g. devulcanisation (depolymerisation to the original monomer C07) |
| M     | C08J11/12 | 3 | by dry-heat treatment only |
| M     | C08J2353/00 | 0 | Characterised by the use of block copolymers containing at least one sequence of a polymer obtained by reactions only involving carbon-to-carbon unsaturated bonds; Derivatives of such polymers |
| M     | C08J2453/00 | 0 | Characterised by the use of block copolymers containing at least one sequence of a polymer obtained by reactions only involving carbon-to-carbon unsaturated bonds; Derivatives of such polymers |

*N = new entries where reclassification into entries is involved; C = entries with modified file scope where reclassification of documents from the entries is involved; Q = new entries which are firstly populated with documents via administrative transfers from deleted (D) entries. Afterwards, the transferred documents into the Q entry will either stay or be moved to more appropriate entries, as determined by intellectual reclassification; T = existing entries with enlarged file scope, which receive documents from C or D entries, e.g. when a limiting reference is removed from the entry title; M = entries with no change to the file scope (no reclassification); D = deleted entries; F = frozen entries will be deleted once reclassification is completed; U = entries that are unchanged.

NOTES:

- **No {curly brackets} are used for titles in CPC only subclasses, e.g. C12Y, A23Y; 2000 series symbol titles of groups found at the end of schemes (orthogonal codes); or the Y section titles. The {curly brackets} are used for 2000 series symbol titles found interspersed throughout the main trunk schemes (breakdown codes).**
- **U groups: it is obligatory to display the required “anchor” symbol (U group), i.e. the entry immediately preceding a new group or an array of new groups to be created (in case new groups are not clearly subgroups of C-type groups). Always include the symbol, indent level and title of the U group in the table above.**
- **All entry types should be included in the scheme changes table above for better understanding of the overall scheme change picture. Symbol, indent level, and title are required for all types.**
- **“Transferred to” column must be completed for all C, D, F, and Q type entries. F groups will be deleted once reclassification is completed.**
- **When multiple symbols are included in the “Transferred to” column, avoid using ranges of symbols in order to be as precise as possible.**
• For administrative transfer of documents, the following text should be used: “<administrative transfer to XX>”, “<administrative transfer to XX and YY simultaneously>”, or “<administrative transfer to XX, YY, ... and ZZ simultaneously>” when administrative transfer of the same documents is to more than one place.
• Administrative transfer to main trunk groups is assumed to be the source allocation type, unless otherwise indicated.
• Administrative transfer to 2000/Y series groups is assumed to be “additional information”.
• If needed, instructions for allocation type should be indicated within the angle brackets using the abbreviations “ADD” or “INV”: <administrative transfer to XX ADD>, <administrative transfer to XX INV>, or <administrative transfer to XX ADD, YY INV, ... and ZZ ADD simultaneously>.
• In certain situations, the “D” entries of 2000-series or Y-series groups may not require a destination (“Transferred to”) symbol, however it is required to specify “<no transfer>” in the “Transferred to” column for such cases.
• For finalisation projects, the deleted “F” symbols should have <no transfer> in the “Transferred to” column.
• For more details about the types of scheme change, see CPC Guide.

2. A. DEFINITIONS (modified)

C08J

Definition statement

This place covers:

Replace: The existing Definition statement text with the following updated text.

- Chemical aspects of processes for treating, compounding, working-up or recovery of macromolecular substances unless the treatment, compounding, working-up or recovery is provided for elsewhere as indicated below in the relationship section.
- Chemical features of manufacture, treatment or coating of articles or shaped materials containing macromolecular substances unless the manufacture, treatment or coating is provided for elsewhere as indicated below in the relationship section.
- Chemical aspects of working-up of macromolecular substances to porous or cellular articles or materials and after-treatment thereof unless provided for elsewhere as indicated below in the relationship section.
- Chemical aspects of recovery or working-up of waste materials, i.e. macromolecular materials (e.g. polymers), solvents and unreacted monomers, unless provided for elsewhere as indicated below in the relationship section.

Relationships with other classification places

Replace: The existing Relationships with other classification places text with the following updated text.

C08J covers general processes or treatments that are not already covered by subclasses C08B, C08C, C08F, C08G and C08H.

C08J is residual to subclasses C08B, C08C, C08F, C08G and C08H in relation to after-treatment of macromolecular substances or polymers, and therefore does not cover:
Processes specially adapted for treating macromolecular substances or polymers for which after-treatments are specifically mentioned in C08B, C08C, C08F, C08G and C08H (e.g. C08F 6/00).

Polymerisation processes involving purification or recycling of waste polymers or depolymerisation products of specified macromolecular substances.

Foamed polymeric products of isocyanates or isothiocyanates characterised by the monomers or catalysts used (C08G 18/00).

B29 covers mechanical aspects of working up, after-treatment and compounding of plastics or materials in a plastic state. If a process for working up, after-treatment and compounding of plastics contains both chemical and mechanical aspects, it should be classified in both B29 and C08J.

When classifying in this subclass, additional classification(s) are made from subclass C08L, relating to essential or characterising materials used.

**Special rules of classification**

*Replace*: The existing Special rules of classification text with the following updated text.

Reference B29 is non-limiting in the subclass C08J. CPC will be updated/corrected once this inconsistency is resolved in IPC.

- In this subclass, at each hierarchical level, in the absence of an indication to the contrary, classification is made in the last appropriate place.
- In this subclass, the polymer involved in the working-up is specified using Indexing symbols of the group C08J2300/00-C08J2399/00.
- When the presence of one or several additional polymers, present in minority, is of relevance, this additional polymer is specified using Indexing symbols of the group C08J2400/00-C08J2499/00.

**C08J 3/00**

**Definition statement**

*This place covers:*

*Replace*: The term “plasticizing” with “plasticising” in the following paragraph.

The chemical aspect of making solutions, dispersions or lattices, powdering or granulating, plasticising, compounding with additives, cross-linking, vulcanising and treatment by wave energy or particle radiation.

**Relationships with other classification places**

**Replace:** The second paragraph of the Relationships with other classification places section with the following updated paragraph:

The use of a specific emulsifying agent classified in B01F17/00 could apply to the emulsification of polymers and also be classified in C08J3/02.

**References**

**Delete:** The entire Limiting references section.

**Application-oriented references**

*Examples of places where the subject matter of this place is covered when specially adapted, used for a particular purpose, or incorporated in a larger system:*

**Replace:** The term “characterized” with “characterised”; and the term “characterization” with “characterisation” in the following row.

| Medicinal preparations characterised by the non-active ingredient, e.g. characterisation by their physical form | A61K47/50 |

**Informative references**

*Attention is drawn to the following places, which may be of interest for search:*

**Replace:** The existing Informative references table with the following updated table.

<table>
<thead>
<tr>
<th>Special rules of classification</th>
</tr>
</thead>
</table>

**Replace**: The existing Special rules of classification text with the following updated text.

- **C08J3/122** takes precedence over **C08J3/124**, **C08J3/126**, and **C08J3/128**.
- This subgroup could also be associated with **C08J3/02**, as it is relevant for the process of making a solution or emulsion.
- In **C08J3/22**, the additive added as master batch could also be a polymer.
This subgroup could also be associated with C08J3/20, i.e. compounding polymer with additive.

**C08J 3/18**

**Definition statement**

*This place covers:*

**Insert:** A period at the end of the Definition statement.

This group covers the process of treating polymers with plasticisers in order to modify thermal and mechanical properties of the polymer.

**Relationships with other classification places**

**Delete:** The phrase “as such” from the Relationships with other classification places text.

Plasticisers are classified in C08K.

**Insert:** The following new Special rules of classification section.

**Special rules of classification**

Reference C08K is non-limiting in the main group C08J3/18. CPC will be updated/corrected once this inconsistency is resolved in IPC.
C08J 7/00

Definition statement

This place covers:

Replace: The existing Definition statement text with the following updated text.

All types of treatments of shaped articles comprising polymeric surfaces. The treatments include chemical or physical treatments and coating of continuous polymeric surfaces.

Relationships with other classification places

Replace: The existing Relationships with other classification places text with the following updated text.

- C09D relates to coating compositions.
- B05D relates to processes for applying liquids or other fluent materials to surfaces in general.
- Adhesive sheets are classified in C09J7/00.
- D06M15/00 relates to the coating of polymer fibres.
- D01F relates to the chemical treatment of fibres.

References

Limiting references

This place does not cover:

Delete: The following reference from the Limiting references table.

| Treating textile materials | D06 |
Informative references

Attention is drawn to the following places, which may be of interest for search:

Insert: The following new reference in the Informative references table.

| Treating textile materials | D06 |

Special rules of classification

Replace: The existing Special rules of classification text with the following updated text.

- The treatment of specific polymers is indicated using Indexing symbols of the group C08J2300/00-C08J2399/00.
- When the presence of one or several additional polymers, present in minority, is of relevance, this additional polymer is specified using Indexing symbols of the group C08J2400/00-C08J2499/00.

Example:

- Surface treatment of a polypropylene film is classified in C08J7/00 and C08J2323/12.

C08J 7/06

Definition statement

This place covers:

Replace: The existing Definition statement text with the following updated text.

Coating or impregnating of a polymeric substrate with a low-molecular weight organic or inorganic compound. Adsorbing or absorbing of low-molecular weight compounds or inorganic compounds on a polymeric substrate.
Insert: The following new Relationships with other classification places section.

**Relationships with other classification places**

Coating of a polymeric substrate with a metallic material e.g. metallisation is classified in C23C.

References

Delete: The entire Limiting references section.

Informative references

*Attention is drawn to the following places, which may be of interest for search:*

Insert: The following new reference in the Informative references table.

| Coating with metallic material | C23C |

C08J 7/123

Definition statement

*This place covers:*

Replace: The existing Definition statement text with the following updated text.

Treatment of polymeric substrates with electromagnetic radiation, e.g. corona, plasma, X-rays or γ-rays, UV, laser, etc., wherein the treated substrate may be coated during the treatment or at a later stage or not at all.
Relationships with other classification places

Replace: The existing Relationships with other classification places text with the following updated text.

- Treatment of the bulk of a polymer with electromagnetic radiation is classified in C08J3/28. Treatment of a polymeric surface with electromagnetic radiation is classified in C08J7/123.
- A coating process comprising plasma pre-treatment of polymeric substrates is classified in B05D3/144. If the coating process is more directed to the chemistry of the coated layers, it is classified in C08J7/123.

References

Insert: The following new Limiting references section.

Limiting references

This place does not cover:

| Treatment with polymerisable compounds using wave energy or particle radiation | C08J7/18 |

Informative references

Attention is drawn to the following places, which may be of interest for search:

Replace: The existing Informative references table with the following new table.

| Treatment of a macromolecular compound by wave energy or radiation | C08J3/28 |
| Pre-treatment of polymeric substrates with plasma | B05D3/144 |
**Synonyms and Keywords**

*In patent documents, the following words/expressions are often used as synonyms:*

**Replace:** The existing Synonyms and Keywords table with the following new text.

- “Particle radiation treatment”, “Plasma treatment”, “Electron beam treatment”, and/or “Electronic irradiation”
- “Wave energy treatment”, “Corona discharge”, “Glow discharge”, and/or “Ultraviolet treatment”

**C08J 7/18**

**Synonyms and Keywords**

**Replace:** The existing Synonyms and Keywords text with the following new text.

- “Particle radiation treatment”, “Plasma treatment”, “Electron beam treatment”, and/or “Electronic irradiation”
- “Wave energy treatment”, “Corona discharge”, “Glow discharge”, and/or “Ultraviolet treatment”

**C08J 9/00**

**Relationships with other classification places**

**Replace:** The existing Relationships with other classification places text with the following updated text.

**Classification guidance:**

- Mechanical aspects of shaping of plastics or substances in a plastic state for the production of porous or cellular articles are classified in B29C.
Porous or cellular articles or materials for medical applications are classified in A61L.

References

Delete: The entire Limiting references section.

Insert: The following new Informative references section.

Special rules of classification

Replace: The existing Special rules of classification text with the following updated text.

Reference B29C is non-limiting in the main group C08J9/00. CPC will be updated/corrected once this inconsistency is resolved in IPC.
Classification guidance:

In the absence of an indication to the contrary, classification is made in the last appropriate place.

- Example: Halogenated phosphoric compound as additive is classified in C08J9/0038.

The blowing or foaming agents involved are classified in groups C08J9/02 - C08J9/149.

- The foaming processes are classified in groups C08J9/16 - C08J9/35.

Documents belonging to several subgroups are also classified in the "one dot less" subgroup.

- Example: The combination of brominated flame retardant and phosphoric compound is classified in groups C08J9/0019, C08J9/0038 and C08J9/0014.

The use of water as the sole blowing agent for (poly)isocyanate-containing foams is regarded as trivial. It is not classified in C08J.

Mixtures of organic and inorganic blowing agents are classified in C08J9/127 and each blowing agent of the mixture is also classified according to its nature.

Foams are subdivided according to the involved polymer(s) using the C08L scheme:

- When a foam is characterised by the involved polymer(s), then Indexing symbols of groups C08J2300/00-C08J2399/00 are given, in order to specify said polymer(s).

- The structure of the C08J2300/00 classification is mainly based on the classification of C08L.

- Example: C08J2325/06 corresponds to C08L25/06 (polystyrene). Additionally, groups C08J2300/00 - C08J2300/30 specify polymers that are broadly defined.

When a document deals with one single polymer or several alternative polymers, but no polymer blend, then an Indexing symbol of the C08J2300/00 range is used.

Examples:

- The use of an alkane blowing agent for expanding polystyrene is classified in C08J9/141 and C08J2325/06.

- The use of an alkane blowing agent for expanding polystyrene or polyethylene is classified in C08J9/141, and C08J2325/06 and C08J2323/06.

Further subdivisions:
This subgroup is only allocated when, in addition to a "main" polymer, a second or third polymer is present in the foamable blend. This second or third polymer is always in minority, compared to the main polymer.

- Please see the rules above.

As above, the "main" polymer is indexed using groups C08J2300/00-C08J2399/00.

- The polymeric component in minority is indexed using groups C08J2400/00-C08J2499/00.

Example:

- A foam from a blend or 80% polystyrene and 20% PMMA is classified in C08J9/0061, C08J2325/06 and C08J2433/12.

When overlapping ranges of two polymers are claimed or exclusively exemplified, then a combination of both classification symbols must be given. See example below.

Example:

- A foamable blend of 80-20% polystyrene and 20-80% polyethylene is classified in C08J9/0061 and C08J2425/06 and C08J2323/06, and C08J2423/06 and C08J2325/06.

General practice specifies that any of groups C08J2300/00-C08J2399/00 can be used in combination with any of groups C08J2400/00-C08J2499/00 to define the invention.

- Second and/or third polymers, only present in very low proportions may be ignored, provided their presence is not the key of the invention.

- Foam compositions wherein only the polymer in minority is defined are classified in C08J9/0061 and C08J2400/00-C08J2499/00.

Example:

- Foam comprising 10% polystyrene in 90% of another polymer is classified in C08J9/0061 and C08J2425/06.

C08J9/224

In these subgroups, Indexing symbols of C08J2400/00-C08J2499/00 are used to designate the polymer used for coating, binding or impregnating the foam (particle). The foam itself receives a C08J2300/00-C08J2399/00 symbol.

C08J9/33

In these subgroups, Indexing symbols of C08J2400/00-C08J2499/00 are used to designate the foam fragments. The foamable (C08J9/35) or unfoamable matrix (C08J9/33) is specified using C08J2300/00-C08J2399/00.
C08J9/26
Indexing symbols C08J2201/04 - C08J2201/0484 are used in C08J9/26, for specifying the solid to be extracted.

C08J9/28
Indexing symbols C08J2201/05 - C08J2201/0545 are used in C08J9/28, for specifying the first step of the separation process (cooling, evaporation, precipitation).

Expandable compositions and expanded products are often regarded as similar and thus classified in the same subgroup.
A foam composition is expandable or foamable.
A foam (p)article can be porous cellular, expanded, foamed, pre- or post-foamed, pre- or post-expanded.
A foam contains pores, cavities or cells, which can be closed, open or interconnected.
A foam is porous, macroporous, microporous (1-100 microns diameter) or nanoporous (1-100 nanometers).
The pores distribution can be for unimodal, bimodal or trimodal.
Porous polymeric aerogels, organogels or xerogels can be regarded as foams.

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Replace: The existing Glossary of terms table with the following updated table.

<table>
<thead>
<tr>
<th>Blowing agent</th>
<th>Substance which is either gaseous at ambient temperature or capable of reversibly becoming gaseous upon heating (C08J9/12 or subgroups). This strict distinction is however not always respected in patents.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Expandable</td>
<td>Expandable includes expanding, pre-expanded or expanded.</td>
</tr>
<tr>
<td>Foaming agent</td>
<td>Material that will decompose to release a gas under certain conditions (C08J9/06 or subgroups).</td>
</tr>
<tr>
<td>Integral foams</td>
<td>Foams characterised by a dense or slightly expanded skin on a foamed core.</td>
</tr>
</tbody>
</table>
Open cells foam or foam with open pores | Foam where more than 50% or the pores are open.

Porogen | Compound which is removed after solidification of the polymer composition (C08J9/26, C08J9/28).

Syntactic foams | Foams containing expandable and/or non expandable hollow particles (C08J9/32).

Special rules of classification

Replace: The existing Special rules of classification text with the following updated text.
References B29B17/00, C08B, C08C, C08F, C08G and C08H are non-limiting in the main group C08J11/00. CPC will be updated/corrected once this inconsistency is resolved in IPC.

Looping references between C08J11/00 and B29B17/00 have been identified. Until this inconsistency is resolved in IPC, the current classification practice in CPC is as follows: B29B17/00 is considered as non-limiting in the main group C08J11/00.

Classification Guidance:
The treatment of specific polymers is indicated using Indexing symbols of the group C08J2300/00-C08J2399/00.

When the presence of one or several additional polymers, present in minority, is of relevance, this additional polymer is specified using Indexing symbols of the group C08J2400/00-C08J2499/00.

Example:
- Recycling of saturated polyesters is classified in C08J11/00 and C08J2367/02.

**Synonyms and Keywords**

In patent documents, the following words/expressions are often used as synonyms:

Replace: The existing Synonyms and Keywords text with the following updated text.

- "recycle(-ing)", "reclaim(-ing)", "discard(-ing)", "recuperate(-ing)", "rejuvenate(-ing)", "reutilize(-ing)", "regenerate(-ing)", "salvage(-ing)", "waste", "scrap", "recover(-ing)", "reject(ed)", and "post-consumed" in combination with the corresponding polymer.
Attention is drawn to the following places, which may be of interest for search:

Replace: the existing Informative references table with the following updated table.

| Working-up tar by extraction with selective solvents | C10C1/18 |
| Working-up pitch, asphalt, bitumen by selective extraction | C10C3/08 |

C08J 11/10

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Replace: The existing Informative references table with the following updated table.

| Organic chemistry | C07 |
| Depolymerisation of halogenated hydrocarbon polymers | C07C17/367 |
| Depolymerisation of polyesters | C07C51/09, C07C63/26 |
| Depolymerisation of polyamides | C07D201/12 |
| Depolymerisation of rubber | C08C19/08 |
| Production of liquid hydrocarbon mixtures from rubber or rubber waste | C10G1/10 |

Special rules of classification

Insert: The following new text as the first paragraph of the Special rules of classification section.
Reference C07 is non-limiting in the subgroup C08J11/10. CPC will be updated/corrected once this inconsistency is resolved in IPC.

C08J 11/12
