*N = new entries where reclassification into entries is involved; C = entries with modified file scope where reclassification of documents from the entries is involved; Q = new entries which are firstly populated with documents via administrative transfers from deleted (D) entries. Afterwards, the transferred documents into the Q entry will either stay or be moved to more appropriate entries, as determined by intellectual reclassification; T= existing entries with enlarged file scope, which receive documents from C or D entries, e.g. when a limiting reference is removed from the entry title; M = entries with no change to the file scope (no reclassification); D = deleted entries; F = frozen entries will be deleted once reclassification of documents from the entries is completed; U = entries that are unchanged.

NOTES:

- **No {curly brackets} are used for titles in CPC only subclasses, e.g. C12Y, A23Y; 2000 series symbol titles of groups found at the end of schemes (orthogonal codes); or the Y section titles. The {curly brackets} are used for 2000 series symbol titles found interspersed throughout the main trunk schemes (breakdown codes).
- U groups: it is obligatory to display the required “anchor” symbol (U group), i.e. the entry immediately preceding a new group or an array of new groups to be created (in case new groups are not clearly subgroups of C-type groups). Always include the symbol, indent level and title of the U group in the table above.
- All entry types should be included in the scheme changes table above for better understanding of the overall scheme change picture. Symbol, indent level, and title are required for all types.
- “Transferred to” column must be completed for all C, D, F, and Q type entries. F groups will be deleted once reclassification is completed.
When multiple symbols are included in the “Transferred to” column, avoid using ranges of symbols in order to be as precise as possible.

For administrative transfer of documents, the following text should be used: “<administrative transfer to XX>”, “<administrative transfer to XX and YY simultaneously>”, or “<administrative transfer to XX, YY, ... and ZZ simultaneously>” when administrative transfer of the same documents is to more than one place.

Administrative transfer to main trunk groups is assumed to be the source allocation type, unless otherwise indicated.

Administrative transfer to 2000/Y series groups is assumed to be “additional information”.

If needed, instructions for allocation type should be indicated within the angle brackets using the abbreviations “ADD” or “INV”: <administrative transfer to XX ADD>, <administrative transfer to XX INV>, or <administrative transfer to XX ADD, YY INV, ... and ZZ ADD simultaneously>.

In certain situations, the “D” entries of 2000-series or Y-series groups may not require a destination (“Transferred to”) symbol, however it is required to specify “<no transfer>” in the “Transferred to” column for such cases.

For finalisation projects, the deleted “F” symbols should have <no transfer> in the “Transferred to” column.

For more details about the types of scheme change, see CPC Guide.
2. A. DEFINITIONS (new)

Insert: The following new Definitions:

G06F 9/4451

Definition statement

Roaming user profiles; migrating configuration settings between computers.

References

Informative references

| Network-specific arrangements/protocols involving user profiles | H04L 67/306 |

G06F 9/44552

Definition statement

Mechanisms to allow e.g. different versions of conflicting libraries to be used simultaneously; for example the Windows "DLL Hell".

G06F 9/44563

Definition statement

This place covers:

- Sharing program code/data between different applications in order to reduce the memory footprint;
- Solutions to problems that arise when program code/data is shared (e.g. sharing of global variables and Java static fields), often resulting in the duplication of program code/data.
G06F 9/44568  
Definition statement  
Running programs without having to install or load them beforehand. Execute-in-place refers to running without loading (i.e. without copying to RAM), while portable applications more refer to running without installing.

G06F 9/44578  
Definition statement  
Specific techniques to make code immediately runnable, e.g. making address adjustments (relocation) to enable immediate execution, or prebinding (Mac OS). General aspects of pre-runtime link editing are however classified in G06F8/54.

G06F 9/4482  
Definition statement  
Relates to procedural execution, i.e. imperative programming where the program is built from one or more procedures (subroutines).

G06F 9/4496  
Definition statement
Unification is one of the main ideas behind logic programming, best known through the language Prolog. It represents the mechanism of binding the contents of variables and can be viewed as a kind of one-time assignment.

**G06F 9/4498**

**Definition statement**

Program execution implemented by a Finite State Machine. There must be enough technical details about the FSM implementation to allocate the subgroup.

**G06F 9/45525**

**Definition statement**

Optimisations carried out at runtime without changing the instruction set architecture.

**G06F 9/45529**

**Definition statement**

*This place covers:*

Conversions or optimisations, e.g. done by JavaScript engines or similar plugin technologies built into another execution environment.

**References**

**Informative references**

*Attention is drawn to the following places, which may be of interest for search:*
Dynamic loading of plugins/add-ons  | G06F 9/44526

**G06F 2009/45562**

**Definition statement**

Handling single instantations of virtual machines, e.g. creation from template or copy of another instance.

**G06F 2009/45566**

**Definition statement**

Virtual machines running within other virtual machines.

**G06F 2009/4557**

**Definition statement**

Managing the placement of virtual machine instances.

**G06F 2009/45575**

**Definition statement**

Specifics about start/stop in the context of virtual machines.

G06F 2009/45587

Definition statement

Mechanisms to isolate virtual machine instances from other instances; protection of virtual machines.

References

Informative references

| Security arrangements in general | G06F 21/00 |
G06F 2009/45591

Definition statement

Specifics to enable monitoring or debugging within virtual machines.

References

Informative references

| Monitoring and debugging in general | G06F 11/30, G06F 11/36 |

G06F 2009/45595

Definition statement

Specifics to enable network access of virtual machines.

References

Informative references

| Network-specific arrangements for supporting networked applications | H04L 67/00 |
| Network virtualisation | H04L 12/4641 |
2. A. DEFINITIONS (modified)

**Insert:** The following changes into the existing Definitions:

### G06F 8/34

**Definition statement**

**Replace:** The existing Definition statement with the following new statement:

P programming techniques whereby a program is created by handling graphical programming objects representing programming constructs/statements rather than writing program text.

**References**

**Delete:** The entire Limiting references section.

**Informative references**

**Insert:** The following four new rows into the Informative references table:

<table>
<thead>
<tr>
<th>Use of icons for interaction</th>
<th>G06F3/048</th>
</tr>
</thead>
<tbody>
<tr>
<td>Intelligent editors</td>
<td>G06F8/33</td>
</tr>
<tr>
<td>Development of GUIs, User Interface Management Systems (UIMS)</td>
<td>G06F8/38</td>
</tr>
<tr>
<td>Web page development</td>
<td>G06F16/95</td>
</tr>
</tbody>
</table>
G06F 8/36

Definition statement

Insert: The following new bullet point at the end of the existing list of bullet points within the Definition statement:

- Using APIs and interfaces, e.g. for components, to make software reusable.

References

Delete: The entire Limiting references section.

Informative references

Insert: The following three new rows in the Informative references table:

<table>
<thead>
<tr>
<th>Exlining, i.e. finding similar sequences of code to replace them with a procedure invocation</th>
<th>G06F 8/4436</th>
</tr>
</thead>
<tbody>
<tr>
<td>Version control using repositories</td>
<td>G06F 8/71</td>
</tr>
<tr>
<td>Code clone detection, i.e. detection of identical pieces of code for the purpose of maintenance</td>
<td>G06F 8/751</td>
</tr>
</tbody>
</table>

G06F 8/61

Definition statement

Insert: Bullet points in front of the existing Definition statement, as well as periods after those portions of the statement that are missing periods, so that the section reads as follows:

- First-time installation of software.
• Unattended installation, installation scripts (answer file).
• Network installation.
• Installation packages (containing list of files, program image, files itself, install/update instructions).
• Network installation plans.
• Type of installations.
• Silent installation - no display of the progress of the installation.
• Unattended installation - installation performed without user interaction.
• Self installation - unattended installation without the need of initial launch of the process.
• Headless installation - installation performed without using a monitor connected to the destination computer.
• Clean installation - cleaning up a destination partition (formatting) before actual installation.
• Flat installation - first copying installation files from a media to a hard disk and then installing them from the hard drive.
• Network installation - installation of a program from a shared network drive.
• Virtual installation - performing a virtual installation to check for errors before committing the real installation.

References

Delete: The entire Limiting references section.

Insert: The following new Informative references section:

Informative references

Attention is drawn to the following places, which may be of interest for search:

| Loading of device drivers | G06F 9/4411 |
G06F 8/65

Definition statement

**Insert:** Bullet points in front of the existing Definition statement so that it reads as shown below:

- Updating of existing software, i.e. modifying already installed software to a desired version.
- Being informed of new software that has become available in order to update including installation for the update.
- Synchronization of software of disconnectable devices after their reconnection to the network automatically upgrading software to the correct version.
- Transparent update (e.g. after boot, after update becomes available, regular check for updates,…)
- User-initiated update.

References

*Limiting references*

**Replace:** The existing table rows with the following new single row so the Limiting references table reads as follows:

| Security arrangements therefor | G06F 21/57 |

*Application-oriented references*

**Insert:** The following new table row into the Application-oriented references table:

| Scheduling of updates for software modules stored at the client | H04N 21/26291 |

**Insert:** The following new Informative references section:

*Informative references*
Attention is drawn to the following places, which may be of interest for search:

| Error handling during software upgrade | G06F 11/1433 |
| Synchronizing caches                  | G06F 12/00   |
| Replication of documents/files        | G06F 16/184  |
| Software upgrading/downloading on mobile terminals | H04M 1/72525 |

G06F 8/654

References

Informative references

Insert: The following new row into the Informative references table:

| Secure firmware programming            | G06F 21/572 |

G06F 8/71

Definition statement

Replace: The second paragraph in the existing Definition statement with the following revised paragraph:

Includes in particular:

- Make, Build
- Analysing changes to/conflicts between sources
- SCCS-like tools
- Dependency analysis
- Comparing/obtaining dates of last changes of sources/intermediates/targets;
- CVS - Concurrent Version Control, SVN, GIT, ...
CPC NOTICE OF CHANGES 735
DATE: AUGUST 1, 2019
PROJECT MP0303

Limiting references

Replace: The existing Limiting references table with the following new table that features only a single row:

| Security arrangements therefor | G06F 21/57 |

Insert: The following new Informative references section:

Informative references

Attention is drawn to the following places, which may be of interest for search:

| Dependency analysis in compilers | G06F 8/433 |
| Dealing with different versions of software in the context of software updating | G06F 8/65, G06F 8/658 |
| Configuration of peripheral devices | G06F 9/4411 |
| Configuration in the sense of changing parameters | G06F 9/44505 |
| Version control for text documents | G06F 17/2288 |

G06F 9/4403

Definition statement

Delete: The text "(see also G06F 9/4416)" from the fourth bullet point in the Definition statement so that the bullet point now reads as follows:

• I/O channel initialisation;

References

Delete: The entire Limiting references section.

Insert: The following new Informative references section:
Informative references

Attention is drawn to the following places, which may be of interest for search:

<table>
<thead>
<tr>
<th>Loading microcode per se</th>
<th>G06F 9/24</th>
</tr>
</thead>
<tbody>
<tr>
<td>Configuring of multiprocessors</td>
<td>G06F 15/177</td>
</tr>
</tbody>
</table>

**G06F 9/4492**

**Definition statement**

**Replace:** The existing Definition statement with the following revised statement:

Object oriented class hierarchies including run-time addition of classes to a hierarchy virtual inheritance and/or polymorphism.

**Special rules of classification**

**Replace:** The phrase “should be given” with the phrase “is justified” at the end of the Special rules of classification section so that the text reads as follows:

Documents in G06F9/449 deal with Object-oriented method invocation and will inevitably talk about class hierarchies, which is the subject of G06F9/4492. However, this alone does not justify classification in G06F9/4492: only when the document discloses specific details about class hierarchies, the symbol G06F9/4492 is justified.

**G06F 9/451**

**Definition statement**

**Insert:** Bullet points in front of the existing Definition statement so that it reads as follows:

- The inner working of user interfaces, in particular graphical user interfaces (GUIs), including:
• Interaction of the GUI with applications and OSs
• The structure and interaction of software components of GUIs
• Implementation of GUI concepts typically used in operating systems, e.g. desktop metaphors, widgets or windowing mechanisms
• Implementation of GUI automation mechanisms, e.g. record/replay of user interactions on the GUI

References

Informative references

Insert: The following new row into the Informative references table:

| User interfaces for portable communication terminals, e.g. mobile phones | H04M 1/72519 |

G06F 9/455

Definition statement

Delete: The words “(see glossary)” from the Definition statement so that the statement reads as follows:

The emulation of entities, e.g. operating systems, processors, classified under G06F9/00.

References

Delete: The entire Limiting references section.

Insert: The following new Informative references section:

Informative references

Attention is drawn to the following places, which may be of interest for search:

Dynamic binary instrumentation may use techniques similar to emulators and binary optimizers | G06F 11/3644
---|---
Virtual memory | G06F 12/00
Terminal emulation | G06F 13/105
Computer simulation, in which a model of a system under investigation is being simulated | G06F 17/50

**G06F 9/45558**

**Definition statement**

**Delete:** The phrase “Relates to specific,” capitalize the word “management,” and insert bullets points so that the Definition statement reads as follows:

- Management and integration aspects of hypervisors.
- Functions needed to manage virtual machines or to integrate them into the execution environment that are specific to a hypervised system, e.g. handling of virtual machine instances, creating, cloning, deleting instances, starting and stopping virtual machines, distributing and migrating instances, managing I/O and storage access, isolating virtual machines for security reasons, managing memory of instances.

**Insert:** The following new Special rules of classification section:

**Special rules of classification**

The following CPC breakdown codes are used for refined classification. Please also consider classification in the main trunk symbols referenced by the breakdown codes.
