*N = new entries where reclassification into entries is involved; C = entries with modified file scope where reclassification of documents from the entries is involved; Q = new entries which are firstly populated with documents via administrative transfers from deleted (D) entries. Afterwards, the transferred documents into the Q entry will either stay or be moved to more appropriate entries, as determined by intellectual reclassification; T= existing entries with enlarged file scope, which receive documents from C or D entries, e.g. when a limiting reference is removed from the entry title; M = entries with no change to the file scope (no reclassification); D = deleted entries; F = frozen entries will be deleted once reclassification of documents from the entries is completed; U = entries that are unchanged.

NOTES:

- **No {curly brackets} are used for titles in CPC only subclasses, e.g. C12Y, A23Y; 2000 series symbol titles of groups found at the end of schemes (orthogonal codes); or the Y section titles. The {curly brackets} are used for 2000 series symbol titles found interspersed throughout the main trunk schemes (breakdown codes).
- U groups: it is obligatory to display the required “anchor” symbol (U group), i.e. the entry immediately preceding a new group or an array of new groups to be created (in case new groups are not clearly subgroups of C-type groups). Always include the symbol, indent level and title of the U group in the table above.
- All entry types should be included in the scheme changes table above for better understanding of the overall scheme change picture. Symbol, indent level, and title are required for all types .
- “Transferred to” column must be completed for all C, D, F, and Q type entries. F groups will be deleted once reclassification is completed.
- When multiple symbols are included in the “Transferred to” column, avoid using ranges of symbols in order to be as precise as possible.
- For administrative transfer of documents, the following text should be used: “< administrative transfer to XX>”, “<administrative transfer to XX and YY simultaneously>”, or “<administrative transfer to XX, YY, ...and ZZ simultaneously>” when administrative transfer of the same documents is to more than one place.
- Administrative transfer to main trunk groups is assumed to be the source allocation type, unless otherwise indicated.
- Administrative transfer to 2000/Y series groups is assumed to be “additional information”.

- If needed, instructions for allocation type should be indicated within the angle brackets using the abbreviations “ADD” or “INV”: <administrative transfer to XX ADD> , <administrative transfer to XX INV>, or < administrative transfer to XX ADD, YY INV, ... and ZZ ADD simultaneously>.
- In certain situations, the “D” entries of 2000-series or Y-series groups may not require a destination (“Transferred to”) symbol, however it is required to specify “<no transfer>” in the “Transferred to” column for such cases.
- For finalisation projects, the deleted “F” symbols should have <no transfer> in the “Transferred to” column.
- For more details about the types of scheme change, see CPC Guide.

---	----------------------------

B60W 60/00

Definition statement

This place covers:

- On-board control systems for autonomous road vehicles operating on a road network, whereby the control systems perform decision making processes in real-time about all dynamic driving tasks necessary to control the position of the vehicle along the road network, based on factors related to the vehicle itself, its occupants or its environment, and actuate the required vehicle subsystems to execute the dynamic driving tasks.
An example of a decision making process is to adjust the immediate trajectory of the autonomous vehicle based on the environmental conditions in a close surrounding of the vehicle, while traveling along a given route provided by a navigation system.

DATE: FEBRUARY 1, 2020

PROJECT RP0621

Although the ultimate driving decision remains on board, the AV may outsource part of its computation tasks (e.g. for managing computation load, updating machine learning models).

- Control systems for hand-over processes to and from vehicle occupants specially adapted therefor.

Relationships with other classification places

This group covers on-board control systems, whereas subclass G05D covers remote control systems.

This group also covers control systems for autonomous vehicles in an open road environment.

Traffic control systems are covered by G08G.

2. A. DEFINITIONS (modified)

B60W

Definition statement

Replace the existing Definition statement with the following.

This place covers:

Control systems for conjoint control of vehicle sub-units of different type or different function.

Control systems specially adapted for hybrid vehicles.

Purposes of road vehicle drive control systems for purposes that are

- not related to control of any particular sub-unit, i.e. the controlled sub-unit is not specified, or
- related to conjoint control of vehicle sub-units of different type or different function.

Estimation or calculation of driving parameters for road vehicle drive systems that are used for purposes

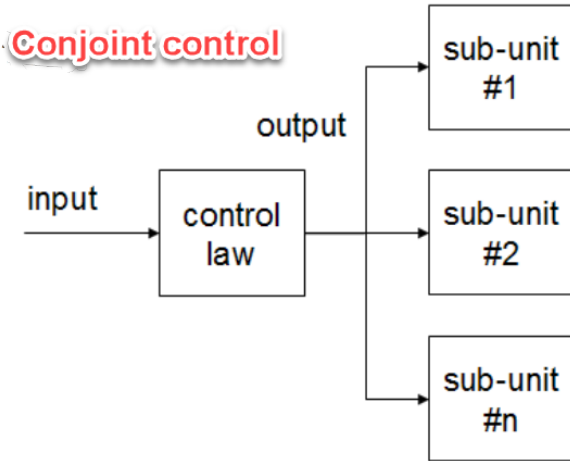

- not related to a particular sub-unit, i.e. the controlled sub-unit is not specified, or
- for conjoint control of vehicle sub-units of different type or different function.

Details of control systems for road vehicle drive control, e.g. monitoring of signals for controllers that are used for purposes

- not related to a particular sub-unit, i.e. the controlled sub-unit is not specified, or
- for conjoint control of vehicle sub-units of different type or different function.

Control systems specially adapted for autonomous road vehicles (AV).

Philosophy of conjoint control in subclass [B60W](#):

sub-units of different type or different function

NOT conjoint control

treated in the field of controlled sub-unit

Special rules of classification

Replace the existing text with the following.

Multi-aspect classification practice is used in this subclass for road vehicle drive control systems using conjoint control. Whenever one or more specific types of sub-units are controlled, classification in main group [B60W10/00](#) should be given for each of the different sub-units controlled. For each controlled sub-unit a classification symbol should

DATE: FEBRUARY 1, 2020

PROJECT RP0621

be added in the relevant place. When documents classified in main group [B60W10/00](#) are also relevant for main groups [B60W20/00](#) - [B60W60/00](#), a classification in one of these groups is required.

Contrary to the IPC, [B60W](#) in CPC is a multi-aspect classification system where classifications have to be given for all features of the independent claims and for all features contributing to the operability of the disclosed invention.

The use of the indexing codes is mandatory.

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Replace the existing table with the following.

Automatic control	Control system for mechanising or assisting, to a full- or partial extent, tasks associated with driving of the vehicle, e.g. those normally carried out by the driver or those necessary to control the motion of the vehicle.
Auxiliary equipment	Subsidiary or supplementary device of the propulsion, transmission or other units of the vehicle, e.g. a pump for supply of pressure for the control unit.
Conjoint Control	Programmed or condition-responsive automatic controller on-board the vehicle, embodying control logic for plural vehicle sub-units and sends control signals to actuators of two or more vehicle sub-units, so that the sub-units act together to solve a particular problem, in order to improve stability, comfort or safety by managing the global dynamics of the vehicle, or in response to a particular driving condition. The control logic considers the plural vehicle sub-units simultaneously, however, the control signals need not be sent at the same time.
Conjoint control of diverse vehicle sub-units	Control of different sub-units within the same vehicle for those vehicles defined under note to class B60 , and of general applicability to different types of vehicles normally under the control of a human driver or autonomous driving system.

Cruise control	System for automatically controlling vehicle speed, which may include additional functions e.g. control of distance between vehicles, so-called "Adaptive Cruise Control" (ACC).
Drive control system	Electronic system in a road vehicle for automatically controlling the movement of that vehicle in order to take certain actions.
Driveline Clutch	Clutch used for purposes other than changing gear ratios.
Driving parameter	All input or output parameters of the road vehicle drive control systems, e.g. road specific parameters, driver or passenger related parameters, state variables of motion of the vehicle body or parameters related to the vehicle itself like load or weight of the vehicle.
Hybrid vehicle	Vehicles having two or more prime movers of more than one type, e.g. electrical and internal combustion motors, and that are either singularly or in combination used for propulsion of the vehicle.
Road Vehicle	Motorised passenger vehicle for transportation on roads, e.g. an automobile, truck or bus
Sub-Unit	One of the following vehicle systems: propulsion system, clutch system, torque converters, change-speed gearing system, system for distributing drive torque between front and rear axles, axle differential system, brake system, steering system, suspension system, energy storage means, fuel cells or auxiliary equipment.

Special rules of classification

Replace the existing text with the following.

When classifying in group **B60W10/00**, classification must also be made in groups **B60W20/00-B60W60/00** in order to identify the purpose or use of the control. For each of the sub-units which are controlled by the controller a classification symbol (invention-type) should be added. The sub-units covered by **B60W10/00** have to be sub-units of a vehicle as defined by **B60W20/00- B60W60/00**.

The use of the indexing codes is mandatory.

B60W 40/00

Insert the following new Special rules of classification section.

Special rules of classification

This group does not cover direct measurement of parameters related to vehicle drive control using a particular sensor. Parameter acquisition relying on sensors should be classified in the area of the sensor, e.g. cameras G06K, ultrasonic G01S.

* C = entries with modified file scope where reclassification of documents from the entries is involved; Q = new entries which are firstly populated with documents via administrative transfers from deleted (D) entries. Afterwards, the transferred documents into the Q entry will either stay or be moved to more appropriate entries, as determined by intellectual reclassification; D = deleted entries; F = frozen entries will be deleted once reclassification of documents from the entries is completed.

NOTES:

- Only C, D, F, and Q type entries are included in the table above.
- When multiple symbols are included in the “To” column, do not use ranges of symbols.
- For administrative transfer of documents, the following text should be used: “< administrative transfer to XX>”, “<administrative transfer to XX and YY simultaneously>”, or “<administrative transfer to XX, YY, ...and ZZ simultaneously>” when administrative transfer of the same documents is to more than one place.
- Administrative transfer to main trunk groups is assumed to be the source allocation type, unless otherwise indicated.
- Administrative transfer to 2000/Y series groups is assumed to be “additional information”.
- If needed, instructions for allocation type should be indicated within the angle brackets using the abbreviations “ADD” or “INV”: <administrative transfer to XX ADD>, <administrative transfer to XX INV>, or < administrative transfer to XX ADD, YY INV, ... and ZZ ADD simultaneously>.
- In certain situations, the “D” entries of 2000-series or Y-series groups may not require a destination (“To”) symbol, however it is required to specify “<no transfer>” in the “To” column for such cases.
- RCL is not needed for finalisation projects.

PROJECT RP0621

- For an (N) 2000 series CPC entry positioned at the end of the CPC scheme (orthogonal code), with no IPC equivalent, complete the IPC column with “CPCONLY” and complete the action column with “NEW”.

NOTES:

- F symbols are not included in the CICL table above.
- T and M symbols are not included in the CICL table above unless a change to the existing IPC is desired.

NOTES:

- The CRL tables above are used for changes to locations **outside** of the project scope. Changes to references in scheme titles or definitions **inside** the project scope will be reflected in the “scheme change” template or one of the “definition” templates.
- In addition to other changes proposed in the tables above, in the column titled “Referenced subclass or group to be changed,” **referenced** D symbols should indicate an action of “delete” or should indicate a replacement symbol and **referenced** F symbols should indicate a replacement symbol.
- When a reference is deleted, text related to that reference will also be deleted unless other references or a range of references associated with the same text remain.
