Signalling devices, e.g. tip-up devices (<u>A01K 91/06</u> takes precedence {; {for floats <u>A01K 93/02</u>; for ice-fishing <u>A01K 97/01</u>; for supports <u>A01K 97/10</u>})

# Project: N/A (A01M)

## U A01M 3/00

Manual implements, other than sprayers or powder distributors, for catching or killing insects, e.g. butterfly nets

A01M 3/007

 {Manual heating or burning apparatus, e.g. using steam, heated elements or waves (Flameflame-throwers A01M 15/00)}

# U A01M 23/00

# **Traps for animals**

U A01M 23/24

- {Spring traps, e.g.} jaw or like spring traps
- A01M 23/30
- Break-back traps, {, i.e. mouse-trap type}

# Project: N/A (A01N)

# U A01N 37/00

Biocides, pest repellants or attractants, or plant growth regulators containing organic compounds containing a carbon atom having three bonds to hetero atoms with at the most two bonds to halogen, e.g. carboxylic acids (containing cyclopropane carboxylic acids A01N 53/00)

A01N 37/18

containing the group ——CO—N<, e.g. carboxylic acid amides or imides; Thio analogues thereof</li>

A01N 37/30

- - containing the groups ----CO----N< and و المالية , both being directly

attached by their carbon atoms to the same carbon skeleton, e.g.  $H_2N$ —NH—CO— $C_6H_4$ — $COOCH_3$ ; Thio-analogues thereof

#### A01N 39/00

Biocides, pest repellants or attractants, or plant growth regulatorregulators containing aryloxy- or arylthio-aliphatic or cycloaliphatic compounds, containing the group  $A_{r-0}-C_{n}=\gamma$  or  $A_{r-s-0}=\gamma$ , e.g. phenoxyethylamine, phenylthio-acetonitrile, phenoxyacetone

# NOTE

In this group, the symbol  $C_n$  means a carbon skeleton, not containing an aromatic ring system wherein n>=2

### U A01N 43/00

containing only one heterocyclic ring, wherein m>=1 and n>=0 and -N(C)

is unsubstituted or alkylsubstituted pyrrolidine, piperidine, morpholine, thiomorpholine, piperazine or a polymethyleneimine with four or more CH<sub>2</sub> groups, A01N 33/00 - A01N 41/12)

# **NOTES**

- 1. In group A01N 43/00, the following terms or expressions are used with the meanings indicated:
  - "Hetero ring" is a ring having at least one halogen nitrogen, oxygen or sulfur atom as a ring member.

Project: N/A (A01N) CPC - 2017.08

A01N 43/00 (continued)

• "Bridged" means the presence of at least one fusion other than ortho, peri and spiro.

- Two rings are "condensed" if they share at least one ring member, i.e. "spiro" and "bridged" are considered as condensed.
- "Condensed ring system" is a ring system in which all rings are condensed among themselves.
- 2. In group A01N 43/00, the number of rings in a condensed system equals the number of scissions necessary to convert the ring system into one acyclic chain. The relevant rings in a condensed system are chosen according to the following criteria consecutively:
  - i. lowest number of ring members,
  - ii. highest number of hetero atoms as ring members.
     Ring members shared by two or more rings are regarded as being a member of each of these rings.

having rings with three nitrogen atoms as the only ring hetero atoms
<ul> <li>1,3,5-Triazines, not hydrogenated and not substituted at the ring nitrogen atoms</li> </ul>
- • with two or three nitrogen atoms directly attached to ring carbon atoms
<ul> <li>Diamino—1,3,5—triazines with only one oxygen, sulfur or halogen atom or only one cyano, thiocyano (-—SCN), cyanato (-—OCN) or azido (-—N<sub>3</sub>) group directly attached to a ring carbon atom</li> </ul>
having rings with four or more nitrogen atoms as the only ring hetero atomatoms
having rings with nitrogen atoms and oxygen or sulfur atoms as ring hetero atoms
<ul> <li>five-membered rings with one nitrogen atom and either one oxygen atom or one sulfur atom in positionpositions</li> <li>1,3</li> </ul>
cliocides, pest repellants or attractants, or plant growth regulators ontaining organic compounds containing a carbon atom not being nember of a ring and having no bond to a carbon or hydrogen atom, e.g. erivatives of carbonic acid (carbon tetrahalides A01N 29/02)
the carbon atom having no bond to a nitrogen atom
- containing >N-—S-—C≡(Hal)₃ groups
<ul> <li>containing —O—CO—O— groups; Thio analogues thereof</li> </ul>
the carbon atom having one or more single bonds to nitrogen atoms
<ul> <li>Carbamic acid derivatives, i.e. containing the group —O—CO—N&lt;; Thio analogues thereof</li> </ul>
<ul> <li>containing a —O—CO—N&lt; group, or a thio analogue thereof, neither directly attached to a ring nor the nitrogen atom being a member of a heterocyclic ring</li> </ul>
<ul> <li>containing a —O—CO—N&lt; group, or a thio analogue thereof, directly attached to a heterocyclic or cycloaliphatic ring</li> </ul>
<ul> <li>Ureas or thioureas containing the groups &gt;NCON&lt; or &gt;NCSN&lt; (isoureas, isothioureas <u>A01N 47/42</u>)</li> </ul>
<ul> <li>Derivatives containing the group &gt;N—CO—N aryl or</li> </ul>
>N-—CS-—N-—aryl
<ul> <li>N-—CS-—N-—aryl</li> <li>containing &gt;N-—CO-—N&lt; or &gt;N-—CS-—N&lt; groups directly attached to a cycloaliphatic ring</li> </ul>

# **NOTES**

**H4** 

- 1. In this subclass, the following term is used with the meaning indicated:
  - "ice-cream" includes any edible frozen or congealed semi-liquid or pasty substance, e.g. slush ice
- 2. In this subclass, subject matter which cannot be completely classified in a single one of the main groups should be classified in each relevant main group
- 3. The classification symbols of groups:

can be followed by additional symbols preceded by the sign "+", e.g. <u>A23G 1/56</u> +D8. The symbols give further information concerning structure, composition or form and have the meaning as listed below:

#### **NOTES**

- 1. This subclass <u>covers</u> the following subject matter, whether set forth as a composition (mixture), process of preparing the composition or process of treating using the composition:
  - a. Drug or other biological compositions which are capable of:
    - preventing, alleviating, treating or curing abnormal or pathological conditions of the living body by such means as destroying a parasitic organism, or limiting the effect of the disease or abnormality by chemically altering the physiology of the host or parasite (biocides A01N 25/00 - A01N 65/00);
    - maintaining, increasing, decreasing, limiting, or destroying a
      physiological body function, e.g. vitamin compositions, sex sterilants,
      fertility inhibitors, growth promotors, or the like (sex sterilants for
      invertebrates, e.g. insects, <u>A01N</u>; plant growth regulators <u>A01N 25/00</u>
       <u>A01N 65/00</u>);
    - diagnosing a physiological condition or state by an <u>in vivo</u> test, e.g.
       X-ray contrast or skin patch test compositions (measuring or testing processes involving enzymes or <u>micro-organisms microorganisms</u>
       C12Q; <u>in vitro</u> testing of biological material, e.g. blood, urine, <u>G01N</u>, e.g. <u>G01N</u> 33/48)
  - b. Body treating compositions generally intended for deodorising, protecting, adorning or grooming the body, e.g. cosmetics, dentifrices, tooth filling materials.
- 2. Attention is drawn to the definitions of groups of chemical elements following the title of section C.
- 3. Attention is drawn to the notes in class CO7, for example the notes following the title of the subclass CO7D, setting forth the rules for classifying organic compounds in that class, which rules are also applicable, if not otherwise indicated, to the classification of organic compounds in A61K.
- 4. In this subclass, with the exception of group A61K 8/00, the last place priority rule is applied, i.e. at each hierarchical level, in the absence of an indication to the contrary, classification is made in the last appropriate place.

## Medicinal preparations containing organic active ingredients

### **NOTES**

1. When classifying in groups A61K 31/00 - A61K 41/00 the symbol A61K 2300/00 may be added, using Combination Sets, to indicate a mixture of active ingredients.

- 2. In the preparation of new organic compounds and their use in medicinal preparations, classification is only made in the relevant subclasses C07C - C07J according to the type of compound. However, the inventions dealing with medicinal preparations containing at least two active organic ingredients are always classified in this group in addition to the classification for the type of compounds in C07C - C07J.
- 3. Attention is drawn to the notes in class C07, particularly to the definition of steroids given in Note (1) following the title of C07J and to the definition of carbohydrates and sugars given in the notes following the title of C07H.
- 4. Salts and complexes of organic active compounds are always classified according to the free active compounds. If a complex is formed between two or more active compounds, then they are classified according to all compounds forming the salts or complexes followed by the symbol A61K 2300/00 (i.e. as a mixture of active organic compounds). According to the last place rule, organic active compounds forming salts with heavy metals should be classified in A61K 33/24 - A61K 33/38 and not in subgroups A61K 31/28 - A61K 31/32, A61K 31/555 or A61K 31/714.

This does not apply to complexes, as apparent from the A61K 31/00 scheme, wherein the complexes hemin and hematin are classified in A61K 31/555 and cyanocobalamin in A61K 31/714.

5. From January 2003 onwards, the EPO copies into CPC the IPC classification of the first document received (family representative). However, blends of active ingredients receive the additional symbol A61K 2300/00 as Combination Set.

#### **NOTE**

The concept of "pre-targeting" covers the administration of the modifying agent (which being an agent able to target specific cells in the body), and of the pharmacologically or therapeutically active agent (drug D) in several steps, their "binding" occurring at the in vivo targeted site. It involves administration in at least two steps, for example: (i) a conjugate T-A corresponding to a targeting agent able to target specific cells or receptors in the body (T) linked to a compound A, and (ii) a conjugate D-M corresponding to the drug linked to a modifying agent M able to target the compound A. The sequence involves e.g. the administration of T-A and then D-M. Between step (i) and step (ii), a further compound able to bind to A and M may also be administered, e.g. during a clearing step. Classification being made according to the nature of T in the subgroups of A61K 47/4813, A61K 47/48346 and A61K 47/48723. In A61K 47/4813 and its subgroups. in several steps, their "binding" occurring at the <u>in vivo</u> targeted site. It involves administration in at least two steps, for example: (i) a conjugate T-A corresponding to a targeting agent able to target specific cells or receptors in the body (T) linked to a compound A, and (ii) a conjugate D-M corresponding to the drug linked to a modifying agent M, able to target the compound A. The sequence involves e.g. the administration of T-A and then D-M. Between step (i) and step (ii), a further compound able to bind to A and M may also be administered (e.g. during a clearing step). Classification being made according to the nature of T in the subgroups of A61K 47/4813, A61K 47/48346 and A61K 47/48723. In A61K 47/48723 and its subgroups, T being an antibody. Processes for making harmful chemical substances harmless or less harmful, by effecting a chemical change in the substances (consuming noxious gases by combustion F23G 7/06)

### **NOTES**

- 1. This group does not cover:
  - chemical or physico-chemical type processes where eradicating or diminishing the dangerousness of harmful chemical substances produces useful products (e.g. cement). These types of processes are covered by the appropriate subclass for making the specific product. However, in situations where processes for making products include a subset of process steps with eradicating or diminishing the dangerousness of a harmfull chemical substance as its fundamental goal, and this subset is in itself novel and unobvious, this subset is covered by group A62D 3/00.
- 2. In this group the following term is used with the meaning indicated:
  - harmful chemical substances are chemical waste substances which are too hazardous or toxic to be discarded in an ordinary municipal landfill.
- 3. In this group, at each hierarchical level, in the absence of an indication to the contrary, classification is made in the first appropriate place.
- 4. In this group, it is desirable to add the indexing code(s) of group A62D 2101/00 relating to the nature of the harmful chemical substance.
- 5. This group covers
  - Processes for combatting harmful chemical substances or agents or
    materials containing harmful chemical agents. These processes can be
    chemical or physico-chemical, e.g. use of special chemical reagents for
    chemical fixing, and result in the decomposition or transformation of the
    agents in harmless or less harmful substances, because of the change
    in its chemical constitution. These processes can comprise the step of
    dissolving or dispersing the hazardous substances in water for the purpose
    of treating them or the step of producing a gaseous product from a nongaseous hazardous substance
  - Treatment of specific hazardous substances in sludge, e.g. residue from industrial processes, with the exception of sludge from (municipal) sewage treatment.
- 6. This group does not cover:
  - Chemical or biological purification of smoke or fumes, covered by B01D 53/34
  - Disposal of solid waste, destroying solid waste or transforming solid waste into something useful or harmless, covered by B09B
  - Chemical reclamation of contaminated soil, covered by B09C 1/08
  - Treatment of waste water, sewage or sludge, covered by <u>C02F</u>
  - Incorporating waste or residues in a glass or vitreous matrix covered by C03C 1/00
  - Incorporating waste or residues in cement or cementitious compositions, covered by <u>C04B 7/24</u>
  - Use of waste materials as filler for mortars, concrete or the like covered by C04B 18/04
  - Destructive distillation, covered by C10B 53/00
  - Obtaining metals from residues or scrap, covered by <u>C22B</u>
  - Consuming waste by combustion, covered by <u>F23G</u>

Catalysts comprising hydrides, coordination complexes or organic compounds (catalyst compositions used only in polymerisation reactions C08 {; {catalytic antibodies C12N 9/0002})

# **NOTES**

- 1. Group <u>B01J 31/003</u> takes precedence over groups <u>B01J 31/02</u> <u>B01J 31/24</u> (catalytic antibodies <u>C12N 9/0002</u>)
- 2. In this group, the following terms or expressions are used with the meanings indicated:
  - "Organic compound" a compound in which carbon is bonded to

     (1)a second carbon;
     (2)at least one atom of hydrogen or halogen; or
     (3)nitrogen by a single or double bond; except cyanic acid (HOCN), cyanogen (NCCN), cyanamide (H2NCN), cyanogen halide (HalCN), hydrocyanic acid (HCN) isocyanic acid (HNCO) fulminic acid (HCNO)and metal carbides (MCCM) (catalysts comprising any of these exceptions or their salts B01J 27/20 B01J 27/26.
  - "Organometallic compounds" includes all organic compounds wherein a metal or metalloid atom is bonded directly to a carbon fragment, the latter being formally anionic, no further neutral ligands being coordinated to the metal and the compound requiring no further cations for charge balance; e.g. M(1-CR3)n with M= main group metal, n= valency of metal and R= H or hydrocarbyl. (Compounds comprising anionic organonitrogen, organooxygen and organosulfur fragments, excluding carboxylates, with a metal bonded to these heteroatoms B01J 31/02 - B01J 31/0254; unsaturated carbon fragments in combination with transition metals B01J 31/2282.
  - "Coordination complexes" includes any donor-acceptor compounds or complex ions comprising organic or inorganic, anionic or neutral Lewis basic ligands, attached to a Lewis acid central metal or metal ion through one or several complexing donor atoms with at least one lone-pair of electrons, e.g. N, O, S, P, to provide at least a Sigma-bond. Typically the maximum number of same or different ligands according to the coordination number, spatial requirements of the ligand and electronic configuration of the metal is bound in a predictable geometry. Complexes of neutral, cationic or anionic hydrocarbon ligands with delocalised charge and/or bonding site, e.g. Pd-olefin complexes or metallocenes, are also included (the following groups take precedence: simple hydrocarbyl metal compounds, e.g. of main group metal(loids) B01J 31/12; oxoacid salts B01J 31/04 B01J 31/10; other compounds comprising anionic organonitrogen, organooxygen and organosulfur fragments with a metal bonded to these heteroatoms B01J 31/02 B01J 31/0254.
  - "Organometallic complexes" includes all coordination complexes comprising a M-C bond, e.g. metal carbonyls (complex cyanides such as M4[Fe(CN)6] B01J 27/26). Included are furthermore complexes which are not strictly organometallic per se, e.g. comprising only N, O, S and/or P coordinated ligands, but are described as involving, or known to involve, organometallic intermediates and/or transition states during use, e.g. Group 8-10 metal complexes for a variety of catalytic reactions or steps thereof, such as oxidative addition, e.g. of ArX, hydrogenation, carbonylation, epoxidation, etc.
  - "Organic complexes" includes all coordination complexes comprising organic ligands (groups <u>B01J 31/1608</u> <u>B01J 31/1895</u> take precedence).
  - "Polymer" includes any macromolecular substance (typically M>10000 g/mol), which comprises repeating units made up of one or several kinds of atoms or groups of atoms, which are identically connected to one another.
     Oligomers, i.e. more than two identical repeating units connected to one

Project: N/A (B01J) CPC - 2017.08

B01J 31/00 (continued)

another and typically 500<M<10000 g/mol, are grouped with the respective polymers (polymers per seC08).

- 3. In this group, if two or more aspects are of equal importance, these are each classified, e.g. two components in a catalyst system such as:
  - support and pendant or otherwise immobilised coordination complex; or
  - · coordination complex and essential additive.

However, if two components, even if separately added, are described as forming, or known to form, a coordination complex, only the latter is classified, e.g. phosphine and Group 8-10 metal such as rhodium. The groups <u>B01J 31/26</u> - <u>B01J 31/38</u> are not to be used for the central metals in coordination complexes but rather for separately added further inorganic ingredients. Each specifically disclosed alternative is separately classified, i.e. specifically

Each specifically disclosed alternative is separately classified, i.e. specifically disclosed by ways of worked examples, specific claims and/or explicit alternatives therein.

4. {When classifying in B01J 31/00, additional information for the catalysts is provided as follows:

(4-1) the specifically disclosed intended uses are indexed in B01J 2231/00;

(4-2) general aspects of the complexes of group B01J 31/16 and the specifically disclosed central metal(s) therein, as well as additional information regarding any special solvents used for any catalyst system of this group are indexed in B01J 2531/00.

(4-3) conceptual articles, e.g. reviews, are separately indexed in B01J 2231/005 and B01J 2531/001;

(4-4) additional information regarding the complexes or ligands classified in  $\underline{\text{B01J }31/16}$  -  $\underline{\text{B01J }31/24}$  and indexed in  $\underline{\text{B01J }2531/00}$  is indexed in  $\underline{\text{B01J }2540/00}$ , e.g. non-coordinating substituents on the ligand periphery

# **NOTES**

- 1. This subclass covers:
  - shaping or joining of plastics;
  - shaping of material in a plastic state when a specific material is not identified;
  - shaping of material in a plastic state, not otherwise provided for.
- 2. This subclass does not cover:
  - working of plastics sheet material in a manner analogous to the working of paper, which is covered by class <u>B31</u>;

Project: RP0402 (B29C) **CPC - 2017.08** 

B29C (continued)

- shaping of materials provided for elsewhere, e.g. of metal, clay or foodstuffs.
- 3. Attention is drawn to Note (3) following the title of class B29.
- 4. In this subclass:
  - repairing of articles made from plastics or materials in a plastic state, e.g. of articles shaped or produced by using techniques covered by this subclass or subclass B29D, is classified in group B29C 73/00;
  - component parts, details, accessories or auxiliary operations which are applicable to more than one moulding technique are classified in groups B29C 31/00 - B29C 37/00;
  - · component parts, details, accessories or auxiliary operations which are only applicable or only of use for one specific shaping technique are classified only in the relevant subgroups of groups B29C 39/00-B29C 71/00.

5. In this subclass, it is desirable to add the indexing codes of subclasses B29K and B29L.

Shaping composites, i.e. plastics material comprising reinforcements, fillers or preformed parts, e.g. inserts (chemical aspects <u>C08</u>, e.g. <u>C08J 5/00</u>)

#### **NOTE**

In this group, the following terms or expressions are used with the meanings indicated:

- "reinforcement" means a structure in the form of fibres, wires, rods, bars, sections, plates or blocks, which improves the strength of an article;
- "filler" means a relatively inert substance in the form of particles, powder, beads, flakes or spheres, which improves the physical properties or increases the bulk or weight of an article:
- "preformed part" means a part made of any material, being completely shaped to have a determined form and which is not used as a reinforcement, e.g. wires or nets forced only into the surface of an article;
- "insert" means a preformed part incorporated in an article during moulding.

MAKING ARTICLES OF PAPER-, CARDBOARD OR CARDBOARD MATERIAL WORKED IN A MANNER ANALOGOUS TO PAPER; WORKING PAPER-, CARDBOARD OR CARDBOARD MATERIAL WORKED IN A MANNER ANALOGOUS TO PAPER

#### NOTE

1. The word "paper" in this class is to be interpreted as covering material worked in a manner analogous to paper, e.g. plastic sheet materials, laminated materials or metal foils. This class does not include making articles directly from paper pulp, which is covered by D21J.

2. 1. This class iscovers to be understood as subject matter restricted to adaptations or associations of handling sheets, webs, or blankblanks peculiar to paper-working, e.g. bag or box making, machinery. Handling sheets, webs, or blanks of wider applicability, irrespective of whether described or claimed only for paper-working machinery, is to be regarded as of a more comprehensive nature and as such classified in B65H.

- This class does not cover:
  - making articles directly from paper pulp, which is covered by <u>D21J</u>;
  - handling sheets, webs or blanks of wider applicability, irrespective of whether described or claimed only for paper-working machinery, which is regarded as being of a more comprehensive nature and is covered by B65H.
- 3. Sheet materials made from plastics, laminated materials and metal foils are examples of materials that can be worked in a manner analogous to paper.

#### NOTE

1. In this subclass, envelopes or bags are regarded as being essentially flexible containers, the final shape of which is determined by their contents.

2. 1. In this subclass, the following expression is terms or expressions are used with the meaning indicated:

- "boxes rigid or cartons semi-rigid containers" includes bags formed similarly to cartons, trays with upstanding side-walls, barrels, tubes and cups, other than articles formed by winding.:
  - containers not deformed by, or not taking-up the shape of, their contents;

CPC - 2017.08

Project: RP0413 (B31B)

- containers adapted to be temporarily deformed to expel their contents;
- pallets;
- trays;
- "flexible containers" includes:
  - containers deformed by, or taking-up the shape of, their contents;
  - containers adapted to be permanently deformed to expel their contents.

3. In this subclass, it is desirable to add the indexing codes of B31B 2201/00 - B31B 2247/00

"hybrid electric vehicle" (HEV) means a vehicle with an electrical prime
mover and a combustion engine, in which the electrical prime mover and
the combustion engine either singly or in combination, drive the ultimate
propulsive elements, e.g. wheels

- "motor-generator" means an electric motor, or an electric generator, or an electrical machine which can be used for both functions, as a motor or a generator

**MICRO-STRUCTURAL MICROSTRUCTURAL** TECHNOLOGY

#### **NOTES**

- 1. This class <u>covers</u> <u>micro-structural microstructural</u> devices or systems, including at least one essential element or formation characterised by its very small size typically within the range of 10-4 to 10-7 meters, i.e. its significant features can not, in at least one dimension, be completely discerned without the use of an optical microscope.
- 2. In this class, the following expressions are used with the meaning indicated:
  - "micro-structural microstructural devices" covers:
    - i. micro-mechanical micromechanical devices comprising movable, flexible or deformable elements; and

B81 (continued)

ii. three-dimensional structures without movable, flexible or deformable elements, comprising microformations designed to accomplish an essential structural function for interacting with their environment, as opposed to purely electronic or chemical functions, regardless of whether the structures are combined with microelectronic microelectronic devices or formed from specific materials;

- "micro-structural microstructural systems" covers:
  - i. systems of cooperating micro-structural microstructural devices; and
  - ii. micromicroelectro-electro-mechanical or micromicroopto-opto-mechanical systems, which combine on a common substrate the specific features of microstructural microstructural devices and electrical or optical components, e.g. for controlling, analysing or signalling the functioning of micro-structural microstructural devices.

MICRO-STRUCTURALMICROSTRUCTURAL DEVICES OR SYSTEMS, e.g. MICRO-MECHANICALMICROMECHANICAL DEVICES (piezo-electric, electrostrictive or magnetostrictive elements per se H01L 41/00)

# **NOTES**

- 1. This subclass does not cover:
  - purely electrical or electronic devices <u>per se</u> which are covered by section H, e.g. subclass H01L;
  - purely optical devices <u>per se</u> which are covered by subclasses <u>G02B</u> or G02F;
  - essentially two-dimensional structures, e.g. layered products which are covered by subclass B32B;
  - chemical or biological structures per se which are covered by section C;
  - structures in atomic scale produced by manipulation of single atoms or molecules, which are covered by group <u>B82B 1/00</u>.
- 2. Devices or systems classified in this subclass are also classified in appropriate subclasses providing for their structural or functional features, if such features are of interest.
- 3. Attention is drawn to the following places:

4. In this subclass, local "residual" subgroups, e.g. <u>B81B 7/0077</u>, are used with the following purpose:

When classifying a document which does not fit in any of a set of subgroups with the same dot-level, the document should be classified in the residual group, if present, and not in the group at the hierarchical level one dot above.

In the example, the document shall be classified in <u>B81B 7/0077</u> and not in <u>B81B 7/0032</u> as <u>B81B 7/0077</u> is "residual" to <u>B81B 7/0035-B81B 7/0074</u>

PROCESSES OR APPARATUS SPECIALLY ADAPTED FOR THE MANUFACTURE OR TREATMENT OF MICRO-STRUCTURAL DEVICES OR SYSTEMS (making microcapsules or microballoons B01J 13/02; processes or apparatus peculiar to the manufacture or treatment of piezo-electric, electrostrictive or magnetostrictive element per se H01L 41/22)

# **NOTES**

- 1. This subclass does not cover:
  - processes or apparatus for the manufacture or treatment of purely electrical or electronic devices, which are covered by section <u>H</u>, e.g. group H01L 21/00;
  - processes or apparatus involving the manipulation of single atoms or molecules, which are covered by group <u>B82B 3/00</u>.
- 2. In this subclass, local "residual" subgroups, e.g. <u>B81C 1/00126</u>, are used with the following purpose.

B81C (continued)

When classifying a document which does not fit in any of a set of subgroups with the same dot-level, the document should be classified in the residual group, if present, and not in the group at the hierarchical level one dot above. In the example, the document shall be classified in  $\underline{\mathsf{B81C}\ 1/00126}$  and not in  $\underline{\mathsf{B81C}\ 1/00023}$  as  $\underline{\mathsf{B81C}\ 1/00126}$  is "residual" to  $\underline{\mathsf{B81C}\ 1/00031}$ - $\underline{\mathsf{B81C}\ 1/000119}$

**B82** NANO-TECHNOLOGY NANOTECHNOLOGY

NOTE

In this class, the following terms are used with the meaning indicated:

- "nano-size nanosize" or "nano-scale nanoscale" relate to a controlled geometrical size below 100 nanometres (nm) in one or more dimensions;
- "nano-structure nanostructure" means an entity having at least one nanosized nanosized functional component that makes physical, chemical or biological properties or effects available, which are uniquely attributable to the nano-scale nanoscale.

Project: N/A (B82B)

NANO-STRUCTURES NANOSTRUCTURES FORMED BY MANIPULATION OF INDIVIDUAL ATOMS. MOLECULES. OR LIMITED COLLECTIONS OF ATOMS OR MOLECULES AS DISCRETE UNITS; MANUFACTURE OR TREATMENT THEREOF

# **NOTES**

- 1. This subclass does not cover chemical or biological nanostructures nanostructures per se, provided for elsewhere, e.g. in classes C08 or C12.
- 2. Attention is drawn to the Note following the title of class B82, which defines the meaning of the terms "nano-sizenanosize", "nano-scalenanoscale" and "nano-structure nanostructure" in this subclass.
- 3. Subject matter classified in this subclass is further classified in subclass B82Y, in order to enable a comprehensive search of nanostructure nanostructure technology using classification symbols of B82Y in combination with classification symbols of B82B.
- 4. Nano-structures Nanostructures having specialised features or functions are further classified in appropriate places in other subclasses that provide for those features or functions, e.g. in G01Q, G02F 1/017, H01L 29/775.

# **NOTES**

- 1. This subclass <u>covers</u> applications and aspects of <u>nanostructures</u> which are produced by any method, and is not restricted to those that are formed by manipulation of individual atoms or molecules.
- 2. Attention is drawn to the Note following the title of class <u>B82</u>, which defines the meaning of the terms "nano-size nanosize", "nano-scale nanoscale" and "nano-structure nanostructure" in this subclass.
- 3. This subclass is intended to enable a comprehensive search of subject matter related to nano-structures place by combination of classification symbols of this subclass with classification symbols from other subclasses. Therefore this subclass covers aspects of nano-structures place that might also be entirely or partially covered elsewhere in the IPC.
- 4. This subclass is for secondary classification, i.e. obligatory supplementary classification of subject matter already classified as such in other classification places, e.g. :

B82B	Nanostructures formed by individual manipulation of atoms, molecules, or limited collections of atoms or molecules as discrete units; manufacture or treatment thereof

5. The classification symbols of this subclass are not listed first when assigned to patent documents.

6. In this subclass, multi-aspects classification is applied, so that aspects of subject matter that are covered by more than one of its groups should be classified in each of those groups.

#### **NOTES**

- 1. In this group, multiple classification is made according to the following rules:
  - when the substrate to be treated is of the artificial stone type, e.g. concrete, classification is made in the range <u>C04B 41/00</u> - <u>C04B 41/5392</u> as well as in the range <u>C04B 41/60</u> - <u>C04B 41/72</u>
  - when the substrate to be treated is of the ceramic type, classification is made in the range <u>C04B 41/00</u> - <u>C04B 41/5392</u> as well as in the range <u>C04B 41/80</u> - <u>C04B 41/91</u>
  - when the substrate to be treated is a-specific, classification is made only in the range C04B 41/00 - C04B 41/5392
- 2. In groups <u>C04B 41/0018</u> <u>C04B 41/53</u>, in the absence of an indication to the contrary, classification is made in the last appropriate place.
- 3. Treating, e.g. coating or impregnating, a material with the same material or with a substance which ultimately is transformed into the same material is not considered after-treatment for this group but is classified as preparation of the material, e.g. a carbon body impregnated with a carbonisable substance is classified in C04B 35/52.
- 4. In groups C04B 41/00 C04B 41/53, it is desirable to add the indexing codes relating to the nature of the substrate being treated. The indexing codes, which are chosen from groups C04B 26/00 C04B 38/00 should be unlinked.
- 5. In groups  $\frac{\text{C04B 41/00}}{\text{c04B 41/50}}$   $\frac{\text{C04B 41/53}}{\text{c04B 41/53}}$ , it is desirable to add the indexing codes relating to aspects of the coating composition or to the method of application. The indexing codes, which are chosen from groups  $\frac{\text{C04B 41/00}}{\text{c04B 41/5392}}$  should be unlinked.
- 6. Attention is drawn to internal Note (2) following the title of subclass CO4B.

#### NOTES

- 1. In group <u>C04B 41/45</u> and sub-groups, as a general rule, classification is made according to the end products, rather than according to the starting materials, in the coating or impregnating compositions.
- 2. In groups C04B 41/45 C04B 41/528 the following term is used with the meaning indicated:
  - "coating" covers material applied to the substrates as powdery material
    or applied from the gas or liquid phase, e.g. as a slurry; it only covers the
    use of preformed sheet-like elements in so far as the thickness of these
    sheets is small compared with the thickness of the substrate and so far as
    the resulting product is not exclusively one of the type classifiable in <a href="B32B">B32B</a>

#### **NOTES**

- 1. Group <u>C08F 4/00</u> and subgroups can be incomplete according to the following classification rules:
  - if a catalyst is specifically used for only one type of polymer, it is not classified in C08F 4/00;
  - in such a case, the classification symbol of <u>C08F 4/00</u> providing for the catalyst may be used as a symbol for a C-Set in the groups providing for the polymer, e.g. (<u>C08F 12/04</u>, <u>C08F 4/62</u>)
  - this method of classification is applied only when a note after the group providing for the polymer explicitly indicates which symbols of C08F 4/00 may be used for forming the C-set.
- 2. When classifying in group <u>C08F 4/00</u>, the type of catalyst can be further indexed by using indexing codes chosen from <u>C08F 2410/00</u>, <u>C08F 2420/00</u> or their subgroups

#### **NOTES**

- 1. This subclass <u>covers</u> the production of compounds or compositions by biochemical transformation of matter performed by using enzymes or <u>microorganisms</u> are defined as any single-celled organisms, including bacteria, fungi, yeast or microalgae, or plant or mammalian cells in the form of cell cultures.
- 2. In this subclass, documents are primarily classified according to the compounds produced. In addition, if appropriate, classification according to the method or biocatalyst used to produce the compound is made.
- 3. Classification in groups C12P 19/14 C12P 19/24, C12P 39/00, C12P 41/00 C12P 41/009 should only be made together with the corresponding product groups

#### **WARNING**

The following IPC groups are not used in the CPC scheme. Subject-matter covered by these groups is classified in the following CPC groups:

- C12P 21/04 covered by <u>C07K 7/50</u> - C12P 21/08 covered by <u>C07K 16/00</u>

# C12P 1/00

Preparation of compounds or compositions, not provided for in groups  $\underline{\text{C12P 3/00}}$  -  $\underline{\text{C12P 39/00}}$ , by using  $\underline{\text{micro-organisms}}$  or enzymes

#### **NOTES**

- 1. This group is used for the classification of documents relating to the production of compounds of unknown structure
- 2. When classifying in this group, classification should be made also in C12R

MEASURING OR TESTING PROCESSES INVOLVING ENZYMES OR MICRO-ORGANISMS (immunoassay G01N 33/53); COMPOSITIONS OR TEST PAPERS THEREFOR; PROCESSES OF PREPARING SUCH COMPOSITIONS; CONDITION RESPONSIVE CONTROL IN MICROBIOLOGICAL OR ENZYMOLOGICAL PROCESSES

#### **NOTES**

- 1. This subclass <u>does not cover</u> the observation of the progress or of the result of processes specified in this subclass by any of the methods specified in groups G01N 3/00 G01N 29/00, which is covered by subclass G01N.
- 2. In this subclass, the following expression is used with the meaning indicated: "involving", when used in relation to a substance, includes the testing for the substance as well as employing the substance as a determinant or reactant in a test for a different substance.
- 3. Attention is drawn to Notes (1) to (3) following the title of class C12.
- 4. In this subclass, test media are classified in the appropriate group for the relevant test process.
- 5. Documents describing the use of an electrode for analysis of a specific analyte are classified in C12Q 1/001 or subgroups and not according to the last place rule
- 6. Documents relating to new peptides, e.g. enzymes, or new DNA or its corresponding mRNA, encoding for the peptides, and their use in measuring or testing processes are classified in subclass CO7K or in group C12N 9/00 according to the peptides, with the appropriate indexing codes relating to their use in diagnostics. However where the new nucleic acids are principally used in diagnostic processes, e.g. PCR, hybridisation reactions, the documents are also classified in group C12Q 1/68
- 7. When classifying in groups C12Q 1/68 C12Q 1/70 it is desirable to classify with symbols from groups C12Q 2500/00 C12Q 2565/634, relating to relevant technical features of the invention, using Combination Sets.
- 8. In groups  $C12Q \frac{1}{6876}$   $C12Q \frac{1}{6895}$  and  $C12Q \frac{1}{70}$   $C12Q \frac{1}{708}$  it is desirable to add the indexing codes  $C12Q \frac{2600}{00}$   $C12Q \frac{2600}{178}$  which reflect the use of the product in combination with the virus groups only if the application refers to products.

- 1. In this subclass, the first place priority rule is applied, i.e. at each hierarchical level, classification is made in the first appropriate place.
- 2. When classifying in this subclass, subject matter of interest is also classified in other appropriate places:
  - library members are also classified in the appropriate places elsewhere in the IPC, (e.g. in section <u>C</u>) according to established procedure relating to "Markush"-type formulae (see paragraph 101 of the Guide);
  - methods or apparatus covered by this subclass are also classified for their biological, chemical, physical or other features in the appropriate places in the IPC, if such features are of interest, e.g.

## **NOTES**

- 1. The indexing codes <u>G01N 2800/02</u> <u>G01N 2800/44</u> are based on The Merck Manual of Diagnosis and Therapy (17th. Edition, Mark Beers and Robert Berkow).
- 2. For diseases caused by micro-organismmicroorganism where the microorganism is detected, which subject matter is classified in G01N 33/569 and subgroups, G01N 33/571 or G01N 33/576, the present indexing scheme is not used.
- 3. For cancers, which subject matter is classified in <u>G01N 33/574</u> and subgroups, the present indexing scheme is not used.
- 4. When indexing in the following scheme, the organ takes precedence, e.g. inflammation of the skin is indexed with dermatological disorders and not with immunology or allergic disorders, asthma with pulmonary disorders and not with immunology or allergic disorders. Exception is made for thrombosis which is indexed with haematological disorders.

## **NOTES**

- 1. This group covers:
  - systems for detecting the presence of an object, e.g. by reflection or reradiation from the object itself, or from a transponder associated with the object, for determining the distance or relative velocity of an object, for providing a co-ordinated display of the distance and direction of an object or for obtaining an image thereof;
  - systems arranged for mounting on a moving craft or vehicle and using the reflection of waves from an extended surface external to the craft, e.g. the surface of the earth, to determine the velocity and direction of motion of the craft relative to the surface.
- 2. This group does not cover:
  - systems for determining the direction of an object by means not employing reflection or reradiation, which are covered by groups <u>G01S 1/00</u> or <u>G01S 3/00</u>;

SYSTEMS FOR CONTROLLING OR REGULATING NON-ELECTRIC VARIABLES (for continuous casting of metals <u>B22D 11/16</u>; valves <u>per se F16K</u>; sensing non-electric variables, <u>see</u> the relevant subclasses of <u>G01</u>; for regulating electric or magnetic variables <u>G05F</u>)

## **NOTES**

- 1. This subclass <u>does not cover</u> features of general applicability to regulating systems, e.g. anti-hunting arrangements, which are covered by subclass <u>G05B</u>.
- 2. In this subclass, the following term is used with the meaning indicated:
  - "systems" includes self-contained devices such as speed governors, pressure regulators.
- 3. Control systems specially adapted for particular apparatus, machines or processes are classified in the subclasses for the apparatus, machines or processes, provided that there is specific provision for control or regulation relevant to the special adaptation, either at a detailed level, (e.g. A21B 1/40 : "for regulating temperature in bakers' ovens") or at a general level, (e.g. B23K 9/095 : "for automatic control of welding parameters in arc welding"). Otherwise, classification is madein the most appropriate place in this subclass.

The following are lists of places where there is specific provision of the kind referred to above. Where such provision is at a detailed level, the places have been grouped according to the main groups of this subclass. Where the provision is at a general level (e.g. of a kind appropriate to more than one of the main groups specified in the lists, or to main groups G05D 27/00 or G05D 29/00 ), the places are listed under the title "General References".

#### **NOTES**

1.

Attention is drawn to the Notes following the titles of class <u>B81</u> an subclass <u>B81B</u> relating to "micro-structural microstructural devices" and microstructural systems"

- 2. This subclass <u>covers</u> (in groups <u>H01H 69/00</u> <u>H01H 87/00</u>) devices for the protection of electric lines or electric machines or apparatus in the event of undesired change from normal electric working conditions, the electrical condition serving directly as the input to the device.
- 3. This subclass <u>does not cover</u> bases, casings, or <u>covers</u> accommodating two or more switching devices or for accommodating a switching device as well as another electric component, e.g. bus-bar, line connector. Those bases, casings or <u>covers</u> are covered by group <u>H02B 1/26</u>.
- 4. In this subclass, the following terms or expressions are used with the meanings indicated :
  - "relay" means a switching device having contacts which are operated from electric inputs which supply, directly or indirectly, all the mechanical energy necessary to cause both the closure and the opening of the contacts;
  - "driving mechanism" refers to the means by which an operating force applied to the switch is transmitted to the moving contact or contacts;
  - "operating" is used in a broader sense than "actuating" which is reserved for those parts not touched by hand to effect switching;
  - "acting" or "action" means a self-induced movement of parts at one stage of the switching.

These connotations apply to all parts of the verbs "to operate", "to actuate" and "to act" and to words derived therefrom, e.g. to "actuation".

- 5. In this subclass, details are classified as follows:
  - details of an unspecified type of switching device, or disclosed as applicable to two or more kinds of switching devices designated by the terms or expressions "switches", "relays", "selector switches", and "emergency protective devices", are classified in groups H01H 1/00 -H01H 9/00;
  - details of an unspecified type of switch, or disclosed as applicable to two
    or more types of switches as defined by groups H01H 13/00 H01H 43/00
    and sub-groups H01H 35/02, H01H 35/06, H01H 35/14, H01H 35/18,
    H01H 35/24 and H01H 35/42, all hereinafter called basic types, are
    classified in groups H01H 1/00 H01H 9/00;
  - details of an unspecified type of relay, or disclosed as applicable to two or more types of relays as defined by groups <u>H01H 51/00</u> - <u>H01H 61/00</u>, hereinafter called basic types are classified in H01H 45/00;
  - details of an unspecified protective device, or applicable to two or more types of protective devices as defined by groups <u>H01H 73/00</u> -<u>H01H 83/00</u>, hereinafter called basic types, are classified in <u>H01H 71/00</u>.
  - However, details only described with reference to, or clearly only applicable
    to, switching devices of a single basic type, are classified in the group
    appropriate to switching devices of that basic type, e.g. <u>H01H 19/02</u>,
    <u>H01H 75/04</u>;

H01H (continued)

 mechanical structural details of control members of switches or of keyboards such as keys, push-buttons, levers or other mechanisms for transferring the force to the activated elements are classified in this subclass, even when they are used for controlling electronic switches.

However, mechanical details directly producing electronic effects are classified in group <u>H03K 17/94</u>.

#### **NOTES**

- 1. {This group <u>covers</u>: "Jamming", only when it means purposefully trying to interfere with the physical transmission and reception of communication. Provided this condition is met, this group <u>covers</u> devices and methods for:
  - a. jamming of communication:
    - i. jamming by intentionally decreasing the signal to noise ratio
    - ii. deceptive jamming
    - iii. passive jamming
    - iv. destructive jamming
  - b. countermeasures against jamming
  - c. countermeasures against undesired self-jamming resulting from jamming
  - d. countermeasures against surveillance, interception or detection
  - e. other electronic countermeasures using or against electromagnetic or acoustic waves
  - f. signal detection techniques used in relation to
    - i. jamming: for interception and monitoring of the jamming target signal
    - ii. anti-jamming: for jamming detection,
    - iii. anti-surveillance: for surveillance detection
  - g. jamming for testing or assessing countermeasures
  - h. jamming used to prevent:
    - cellular phone communication
      - i. in a vehicle during motion
      - ii. in particular areas, including prisons, hospitals, planes, petrol stations, theatres
      - iii. to trigger RCIEDs reception of positioning data using GPS
    - wireless communication in ad hoc networks or in sensor networks
    - exchange of data between wirelessly connected devices or device units, on Bluetooth, infrared or near field links
    - unauthorized access to network, service or information, including:
      - i. access to a WLAN network
      - ii. access to information stored in contactless carriers, including RFID carriers
    - · transmission of an alarm, against burglary or vehicle theft
    - remote control of devices
    - surveillance
      - i. of speech in meeting rooms
      - ii. of electromagnetic emissions from a computer screen
    - interception or detection of a wirelessly transmitted signal

## **NOTES**

- 1. This group covers:
  - 1.1 Cryptographic mechanisms including cryptographic protocols and cryptographic algorithms, whereby a cryptographic protocol is a distributed cryptographic algorithm defined by a sequence of steps precisely specifying the actions required of two or more entities to achieve specific security objectives (e.g. cryptographic protocol for key agreement), and whereby a cryptographic algorithm is specifying the steps followed by a single entity to achieve specific security objectives (e.g. cryptographic algorithm for symmetric key encryption).
  - 1.2 <u>H04L 9/00</u> focuses on cryptographic mechanisms such as encryption schemes, digital signatures, hash functions, random number generation, key management, said cryptographic mechanisms providing information security such as privacy or confidentiality, data integrity, message authentication, entity authentication, authorization, validation, certification, time-stamping, anonymity, revocation, non-repudiation.
  - 1.3 <u>H04L 9/00</u> covers also countermeasures against attacks on cryptographic mechanisms.
- 2. This group does not cover:
  - 2.1 Networking architectures or network communication protocols for securing the traffic flowing through data packet networks and providing

secure exchanges among applications communicating through data packet networks, which are covered by <u>H04L 63/00</u>. Attention is drawn to the Note 1. after group <u>H04L 63/00</u>

2.2 Security arrangements for protecting computers or computer systems against unauthorised activity, which are covered by G06F 21/00

#### **NOTES**

- 1. This group covers:
  - interactive video distribution processes, systems, or elements thereof, which are characterised by point-to-multipoint system configurations, and which are mainly used for motion video data unidirectional distribution or delivery resulting from interactions between systems operators, e.g. access or service providers, or users e.g. subscribers, and system elements.
  - such systems include dedicated communication systems, such as television distribution systems, which primarily distribute or deliver motion video data in the manner indicated, which may, in addition, provide a framework for further, diverse data communications or services in either unidirectional or bi-directional form. However, video will occupy most of the downlink bandwidth in the distribution process.

H04N 21/00 (continued)

 typically, system operators interface with transmitter-side elements or users' interface with receiver-side elements in order to facilitate, through interaction with such elements, the dynamic control of data processing or data flow at various points in the system. This interaction is typically occasional or intermittent in nature.

- processes, systems or elements thereof specially adapted to the generation, distribution and processing of data, which is either associated with video content, e.g. metadata, ratings, or related to the user or his environment and which has been actively or passively gathered. This data is either used to facilitate interaction or to alter or target the content.
- 2. In this main group, at each hierarchical level, in the absence of an indication to the contrary, classification is made in the first appropriate place
- 3. In this main group, the following terms and expressions are used with the meaning indicated:

additional data - designates still pictures, textual, graphical or executable data such as software. It is used to convey supplemental information and can be generated prior to or during the distribution process itself, e.g. metadata, keys.

content designates video or audio streams, which may be combined with additional data. Video data will always be present and occupy most of the downlink bandwidth in the distribution process

server - designates an apparatus designed for adapting the content received from the content provider to the distribution network. It also manages the distribution to client devices or intermediate components over a network. Further servers may also be present for gathering or generating additional data, e.g. rights management server

additional data server - designates a server, which sole purpose is the distribution or management of additional data. It is not in charge of the distribution of video or audio data

client - designates an apparatus such as a TV receiver, a set-top-box, a PC-TV, a mobile appliance (e.g. mobile phone or receiver in a vehicle), for receiving video, audio and possibly additional data from one or several servers or intermediate components via a network for further processing, storing or displaying. It can also transmit this data on a home-based local network to further devices, e.g. a home server transmitting video to PCs and set-top-boxes within a home.

local network - pertains to a restricted area, e.g. a home or a vehicle, and designates the link between a client and its peripheral devices network - is to be distinguished from "local network": "network" designates the link between the server and the clients, or between the server and the intermediate components or between the intermediate components and the clients, or between remotely located clients

distribution - encompasses broadcasting, multicasting and unicasting techniques for transmitting content from one or more sources to one or more receiving stations. The distribution follows a request by a receiving station to the source, e.g. VOD or from a customization of the content by the source, e.g. targeting advertisements to a demographic group in a unidirectional or bidirectional system. Additionally, distribution encompasses techniques where the client acts as a source and another client acts as a receiving station, e.g. a peer-to-peer system for sharing video among client devices

end-user - designates a physical person, e.g. a TV viewer, who consumes the content using the client device. He is the final recipient of the content distributed by the server

interaction - covers actions occurring between or among two or more objects that have an effect upon one another, wherein objects comprise users, system operators, system elements, or content. The user may interact with content locally at the client device, e.g. for requesting additional data stored within the client device. The user may interact with content

H04N 21/00 (continued)

remotely through a server e.g. for VOD playback control or for uploading video to a server. The client device may interact with the content e.g. selecting content based upon the user profile. The client device may interact with a server using a return channel, e.g. for authenticating client or uploading client hardware capabilities. The server may interact with a client device, e.g. to force a client to tune to an advertisement channel upstream - designates the direction of data flow towards the source, e.g. a server receiving a request via a mobile phone network d ownstream - designates the direction of data flow towards a client, e.g. a client receiving data originating from a server elementary stream An elementary stream (ES) as defined by the MPEG system layer designates the output of an audio or video encoder
