

## B26D

**CUTTING; DETAILS COMMON TO MACHINES FOR PERFORATING, PUNCHING, CUTTING-OUT, STAMPING-OUT OR SEVERING (soil-working [A01B](#); for growing crops or plants [A01D](#), [A01G](#); for fodder or straw [A01F](#); for bulk butter [A01J](#); for dough [A21C](#); slaughtering [A22B](#); for tobacco, cigars or cigarettes [A24](#); marking-out, perforating or making buttonholes [A41H 25/00](#); manufacturing footwear [A43D](#); brushmaking [A46D](#); surgery [A61B](#); disintegrating, mincing or shredding in general [B02C](#); cutting wire, making pins or nails [B21F](#), [B21G](#); of the kind used for metal [B23](#); cutting by abrasive fluid jets [B24C 5/02](#); hand-held cutting tools [B26B](#); perforating, cutting-out, stamping-out or punching, or severing by means other than cutting [B26F](#); for wood [B27](#); for stone [B28D](#); working of plastics or substances in a plastic state [B29](#); making boxes, cartons, envelopes or bags, of paper or similarly worked materials, e.g. metal foil, [B31B](#); article or web delivery apparatus incorporating cutting or line-perforating devices [B65H 35/00](#); for leather or upholstery [B68](#); [C14B](#); for glass [C03B](#); making matches [C06F](#); for peat [C10F](#); for sugar [C13B 45/00](#); for textile materials [D06H](#); civil engineering, building, mining, see Section [E](#); for light guides [G02B 6/25](#); cutting processed photographic material [G03D 15/04](#))**

### Definition statement

*This place covers:*

Cutting of non-metallic sheet material or metal foil in general and cutting other forms of non metallic materials not otherwise provided for; apparatus or machines therefor; cutting members therefor. Cutting is defined as a process of severing material with a sharp edge penetrating into material, e.g. a blade as cutting member, without removing material in form of chips.

- Characterised by the nature or movement of a cutting member which does not travel with the work, e.g. stationary or linearly movable cutting members reciprocating or rotating cutting members;
- Characterised by the nature or movement of a cutting member which travels with the work, i.e. flying cutter, e.g. mounted on a movable arm or carriage;
- Characterised by the nature of the cut made, e.g. beveling, grooving, scoring, forming notches, or splitting/separating layers by cutting; Apparatus therefore;

Arrangements for operating and controlling machines or devices for cutting, cutting-out, stamping out, punching, perforating and also for severing by means other than cutting, e.g.

- Means for moving the cutting member into its operative position for cutting, or for actuating the cutting member to effect the cut;
- Arrangements with interrelated action between the cutting member and work feed, or between work feed and clamp, or with means operable by the moving work to initiate the cutting action;
- Details of apparatus for cutting, cutting-out, stamping out, punching, perforating and also for severing by means other than cutting
- Means for holding, positioning, clamping or for removing cut-out material or waste;
- Means for mounting or adjusting the cutting member or the stroke of the cutting member;
- Means for treating work or cutting member to facilitate cutting, e.g. by sharpening the cutting member;
- Means for performing other operations combined with cutting, e.g. counting the number of cuts, conveying, weighting the cut product;
- Cutting beds;
- Safety devices specially adapted for cutting machines;

- Cutting apparatus combined with punching or perforating apparatus or with dissimilar cutting apparatus or combinations of several similar cutting apparatus

### Relationships with other classification places

With regard to the aspect of cutting itself, irrespective of the material:

- The term cutting as used in groups of subclass [B26D](#) covers severing material with a sharp edge penetrating into the material, e.g. a blade as cutting member, without removing material in the form of chips. Therefore severing otherwise than by cutting, e.g. by shearing or tearing, and cutting whereby chips of material are removed, e.g. working material by turning, boring, milling, sawing is not covered by the subclass [B26D](#).
- Perforating, cutting-out, punching, stamping-out or severing by means other than cutting regardless of the material is covered by other places especially by [B26F](#) or [B21D](#).
- Hand- held cutting tools are covered by subclass [B26B](#), particularly hand- held motor- driven cutting tools.

With regard to the material to be cut:

- For the material aspect, subclass [B26D](#) covers cutting non-metallic sheet material or metal foil in general, whereby metal foils are covered in so far as they are workable in a manner analogous to paper (as typical non-metallic sheet material). Other forms of non-metallic materials not otherwise provided for are also covered by subclass [B26D](#).
- [B26D](#) does not cover cutting metal other than the aforementioned metal foils:
- Cutting by machine tools used for working metal by removing material is covered by class [B23](#), e.g. for turning, boring, milling, planing, slotting, sawing metal.
- Shearing or similarly severing metal is covered by [B23D 15/00](#) - [B23D 35/00](#).
- Cutting of sheet metal or other metal stock material like metal rods, metal tubes or metal profiles, is covered by subclass [B21D](#), e.g. press-cutting in [B21D 28/00](#). Cutting or splitting metal wire is covered by [B21F 11/00](#) and [B21F 13/00](#).
- Particular aspects of cutting other forms of non-metallic materials are covered by places within subclasses of [B27](#) for wood and similar materials and within main group [B28D 1/00](#) for stone or stone-like materials. [B27L](#) covers for example cutting veneer strips from trunks or splitting wood, [B28D 1/22](#) covers working stone by cutting, e.g. by incising with cutting discs.
- Cutting plastic material (or other non-metallic materials) is covered by places within subclasses of [B23](#), where the term 'metal working' covers other materials unless the context requires otherwise.

With regard to details common to machines for severing:

- This subclass also covers features specific to machines for cutting, perforating, punching, cutting-out, stamping-out, or severing by means other than cutting, which relate to a requirement or problem of a nature which is not peculiar to a machine for these purposes, that is, details of or arrangements for operating or controlling such machines, although the realisation of such features may differ according to the kind of machine concerned. This subclass covers such features in general even if the feature, in any particular case, is to some extent peculiar to, or is claimed only for, a machine designed for perforating, punching, cutting-out, stamping-out, or for severing other than by cutting.
- If the details or arrangements have no essential features specific to cutting, perforating, punching, cutting-out, stamping-out or severing machines, the more general classes, e.g. [F16](#), take precedence.

## Glossary of terms

*In this place, the following terms or expressions are used with the meaning indicated:*

guillotine	a cutter with a knife moving down and guided on both sides
Thin material	material that can be handled similar to paper, e.g. aluminium foils

## B26D 1/00

**Cutting through work characterised by the nature or movement of the cutting member {or particular materials not otherwise provided for}; Apparatus or machines therefor; Cutting members therefor**

### Definition statement

*This place covers:*

Cutting through work characterised by the nature or movement of the cutting member; Apparatus or machines therefor; Cutting members therefor. E.g. cutting blades, linearly moving blades, cutting members rotating about an axis or rotating about a movable axis.

## B26D 1/025

**{for thin material, e.g. for sheets, strips or the like}**

### Definition statement

*This place covers:*

Cutting machines having a stationary cutting member; e.g. trimming the edges of a running web with a stationary cutting member.

**B26D 1/04**

having a linearly-movable cutting member ([B26D 1/46](#), [B26D 1/547](#) take precedence)

**References****Limiting references**

*This place does not cover:*

Cutting by band knives	<a href="#">B26D 1/46</a>
Cutting by wires	<a href="#">B26D 1/547</a>
Involving a cutting member which travels with the work	<a href="#">B26D 1/56</a>

**B26D 1/045**

{for thin material, e.g. for sheets, strips or the like}

**Definition statement**

*This place covers:*

Cutting device having a linearly-movable cutting member, e.g. photo cutter with a cutting member mounted on a carriage and cutting can be performed only in one direction.

**References****Limiting references**

*This place does not cover:*

Paper cutters where the cutting is performed by moving the cutting element back and forth	<a href="#">B26D 1/065</a>
---	----------------------------

Cutting by cup or like cutting members	<a href="#">B26D 1/44</a>
--	---------------------------

**B26D 1/143**

rotating about a stationary axis ([B26D 1/20](#) - [B26D 1/24](#) take precedence)

**Definition statement**

*This place covers:*

Cutting machines having a cutting member moving about a stationary axis, e.g. a food slicer as shown below.

**B26D 1/185**

{for thin material, e.g. for sheets, strips or the like}

**Definition statement**

*This place covers:*

Cutting machine having a cutting member moving about an axis and mounted on a movable carriage for thin material; e.g. a disc cutter mounted on a carriage and operating on a cutting mat.

**References****Limiting references**

*This place does not cover:*

The disc cutter cooperates with a fixed member	<a href="#">B26D 1/205</a>
--	----------------------------

**B26D 1/205**

**{for thin material, e.g. for sheets, strips or the like}**

**Definition statement**

*This place covers:*

Cutting machine having a cutting member moving about an axis and mounted on a movable carriage for thin material and coacting with a fixed member like a counter blade.

**B26D 1/22**

**coacting with a movable member, e.g. a roller ([B26D 1/24](#) takes precedence)**

**Definition statement**

*This place covers:*

Cutting machine having a cutting member moving about an axis coacting with a movable member, e.g. a slitteer with an anvil drum.

**B26D 1/28**

**and rotating continuously in one direction during cutting**

**Definition statement**

*This place covers:*

Cutting machine with a non-circular cutting member and rotating continuously in one direction during cutting; even when the cutting member is rotated manually.

**B26D 1/29**

with cutting member mounted in the plane of a rotating disc, e.g. for slicing beans

**Definition statement**

*This place covers:*

Cutting machine with a non-circular cutting member and rotating continuously in one direction during cutting with cutting member mounted in the plane of a rotating disc.

**References****Informative references**

*Attention is drawn to the following places, which may be of interest for search:*

Miscellaneous implements for preparing or holding food with grating discs or drums.	<a href="#">A47J 43/255</a>
