

## C01B

### NON-METALLIC ELEMENTS; COMPOUNDS THEREOF; {METALLOIDS OR COMPOUNDS THEREOF NOT COVERED BY SUBCLASS [C01C](#)}

#### Definition statement

*This place covers:*

The chemical elements of hydrogen, halogen (fluorine, chlorine, bromine, iodine and astatine), oxygen, sulfur, phosphorus, silicon, nitrogen, boron, selenium, tellurium, and noble gases (helium, neon, argon, krypton, xenon and radon).

Compounds solely composed of any of the elements listed above.

Carbon and compounds of carbon with any of the elements listed above, with the proviso that said compounds cannot contain a carbon atom having direct bonding to another carbon atom, a carbon atom having direct bonding to a hydrogen atom or a halogen atom, or a carbon atom having direct bonding to a nitrogen atom by a single or double bond.

Compounds composed solely of one or more metal atoms and hydrogen.

Peroxides and salts of peroxyacids.

Magnesium, calcium, strontium, or barium sulfides or polysulfides.

Alkali metal sulfides or polysulfides.

Thiosulfates, dithionites and polythionates.

Compounds containing selenium or tellurium.

Azides, metal amides and nitrites.

Carbamic acid and salts thereof.

Binary compounds containing a metal and either N, C or P.

Salts of the oxyacids of halogen or phosphorus.

Compounds consisting only of carbon atoms, e.g. fullerenes, carbon nanotubes.

Phosgene and thiophosgene.

Compounds containing silicon such as silicates, silicon oxides or colloidal silica, e.g. dispersions, gels, hydroorganosols, organosols.

Compounds containing boron.

Substances having molecular sieve properties, but not having base-exchange properties.

Substances having a combination of molecular sieve and base-exchange properties, e.g. crystalline zeolites.

Synthesis, treatment or modification of any of the elements or compounds above by:

- chemical means, i.e. chemical reaction;
- physical means, e.g. concentration, dehydration, purification, separation, solidifying, granulation;
- addition of a stabilizer or preservative; or
- by the combination of chemical and physical means, with the proviso that the resultant product is proper for classification in this subclass.

Methods of preparing the following compounds, in general:

- halides;
- oxides or hydroxides;
- sulphides or polysulfides;
- sulfites;
- sulphates;
- nitrates; or
- carbonates or bicarbonates.

Apparatus:

- for preparation of sulfur trioxide or sulfuric acid by contact processes; or
- for preparation of nitric oxide by catalytic oxidation of ammonia or oxidation of nitrogen.

### Relationships with other classification places

In Class [C01](#), in the absence of an indication to the contrary, a compound is classified in the last appropriate subclass of this class. For example, lead oxide is classified in subclass [C01G](#) rather than in this subclass.

This subclass is a function oriented entry for the chemical elements and their compounds and does not cover the application or use of the elements and compounds under the subclass definition. For classifying such information other entries in IPC exist, for example:

- Compounds or compositions for preservation of the bodies of humans, animals, plants, or parts thereof, e.g. disinfectants, pesticides, herbicides, as pest repellants or attractants, and as plant growth regulators are classified in subclass [A01N](#).
- Preparations for medical, dental, or toilet purposes are classified in subclass [A61K](#).

Salts, adducts, or complexes formed between an inorganic compound of this subclass and an organic compound of class [C07](#), are regarded as organic compounds and classified in class [C07](#).

When a process produces multiple compounds only those which are intended or desired require classification and classification may be proper in multiple subclasses.

### **MULTIPLE CLASSIFICATION**

Biocidal, pest repellent, pest attractant, or plant growth regulatory activity of chemical compounds or preparations is further classified in [A01P](#).

Therapeutic activity of chemical compounds or medicinal preparations is further classified in subclass [A61P](#).

Uses of cosmetics or similar toilet preparations are further classified in subclass [A61Q](#).

### References

#### Limiting references

*This place does not cover:*

Treatment of inorganic materials to enhance their pigmenting or filling properties; Preparation of carbon black	<a href="#">C09C</a>
Intentional preparation of carbon dioxide by a fermentation process or the use of an enzyme	<a href="#">C12P 1/00</a>
Preparation of elements or inorganic compounds except carbon dioxide, by a fermentation process or the use of an enzyme	<a href="#">C12P 3/00</a>
Production of non-metallic elements or inorganic compounds by electrolysis or electrophoresis	<a href="#">C25B 1/00</a>

**Application-oriented references**

Examples of places where the subject matter of this place is covered when specially adapted, used for a particular purpose, or incorporated in a larger system:

Processing powders of inorganic compounds preparatory to the manufacturing of ceramic products	<a href="#">C04B 35/00</a>
--	----------------------------

**Informative references**

Attention is drawn to the following places, which may be of interest for search:

Processes and apparatus in general for separation	<a href="#">B01D</a>
Chemical or physical processes, e.g. catalysts, colloid chemistry; their relevant apparatus	<a href="#">B01J</a>
Inorganic fertilisers	<a href="#">C05D</a>
Organic chemistry	<a href="#">C07</a>
Alloys	<a href="#">C22C</a>
Chemical libraries containing only inorganic compounds or inorganic materials	<a href="#">C40B 40/18</a>
Methods of creating chemical libraries	<a href="#">C40B 50/00</a>

**Special rules of classification**

In this subclass, in the absence of an indication to the contrary, a compound or a process of making a compound appropriate for this subclass is classified in the last appropriate place.

This subclass provides for products which are intended or desired. When a process produces multiple compounds only those which are intended or desired require a classification. However, by-products can be given an additional classification if they or the processes for obtaining them are considered of interest for search.

Inorganic salts of a compound, unless specifically provided for elsewhere, are classified as that compound.

**Glossary of terms**

In this place, the following terms or expressions are used with the meaning indicated:

Base-exchange	The replacement of one cation absorbed on a material by another.
Binary compound	A compound containing and limited to two distinct chemical elements.
Direct bonding	Requires a bond between two adjacent atoms.

Inorganic compound	A compound devoid of a carbon atom and containing a non-metallic element, or a compound containing a carbon atom, and satisfying one of the following criteria: the compound cannot have a carbon atom having direct bonding to another carbon atom, or the compound cannot have direct bonding between a carbon atom and a halogen or hydrogen atom, or the compound cannot have direct bonding between a carbon and a nitrogen atom by a single or double bond. The following are exceptions to the above and are to be considered as inorganic compounds: compounds consisting of only carbon atoms, (e.g. fullerenes), cyanogen, cyanogen halides, cyanamide, phosgene, thiophosgene, hydrocyanic acid, isocyanic acid, isothiocyanic acid, fulminic acid, unsubstituted carbamic acid, and salts of the previously mentioned acids and which contain the same limitations as to a carbon atom.
Isomorphous zeolites	Compounds isomorphous to zeolites wherein the aluminum or silicon atoms in the framework are partly or wholly replaced by atoms of other elements, e.g. by gallium, germanium, phosphorus or boron.
Metal	Any element other than a non-metal.
Metal hydride	Compound containing only metal and hydrogen.
Molecular sieve	Materials (e.g. zeolitic, mesoporous) having cavities and channels which by their size allow some molecules to pass through, but prevent others.
Non-metal	The elements of hydrogen, carbon, halogen (fluorine, chlorine, bromine, iodine and astatine), oxygen, sulfur, phosphorus, silicon, nitrogen, boron, selenium, tellurium and noble gases (helium, neon, argon, krypton, xenon and radon).
Preparation	Covers synthesis, purification, separation, stabilisation, or use of additives, unless a separate place is provided in the classification scheme.
Zeolites	(i) Crystalline aluminosilicates with base-exchange and molecular sieve properties, having three dimensional, microporous lattice framework structure of tetrahedral oxide units; (ii) Compounds isomorphous to those of the former category, wherein the aluminium or silicon atoms in the framework are partly or wholly replaced by atoms of other elements, e.g. by gallium, germanium, phosphorus or boron.

## C01B 3/00

**Hydrogen; Gaseous mixtures containing hydrogen; Separation of hydrogen from mixtures containing it (separation of gases by physical means [B01D](#)); Purification of hydrogen (production of water gas or synthesis gas from solid carbonaceous material [C10J](#); purifying or modifying the chemical compositions of combustible technical gases containing carbon monoxide [C10K](#))**

### References

#### Limiting references

*This place does not cover:*

Preparation of hydrogen by using microorganisms or enzymes	<a href="#">C12P</a>
Electrolytic production of hydrogen	<a href="#">C25B 1/00</a>

#### Informative references

*Attention is drawn to the following places, which may be of interest for search:*

Aspects relating to hydrogen or synthesis gas generation processes	<a href="#">C01B 2203/00</a>
Separation of gases by physical means	<a href="#">B01D</a>
Details relating to the reactors used in the generation of hydrogen or synthesis gas	<a href="#">B01J 8/00</a> , <a href="#">B01J 19/00</a> , <a href="#">B01J 2208/00</a> , <a href="#">B01J 2219/00</a>
Storing fluids in natural or artificial cavities or chambers in the earth	<a href="#">B65G 5/00</a>
Production of water gas or synthesis gas from solid carbonaceous material	<a href="#">C10J</a>
Purifying or modifying the chemical compositions of combustible technical gases containing carbon monoxide	<a href="#">C10K</a>
Vessels for containing or storing compressed, liquefied or solidified gases; fixed-capacity gas-holders; filling vessels with, or discharging from vessels, compressed liquefied, or solidified gases	<a href="#">F17C</a>
Pipe-line systems; pipe-lines	<a href="#">F17D</a>

### Special rules of classification

In this group symbols of groups [B01J 2208/00](#) and [B01J 2219/00](#) should be added, for details relating to the reactors used in the generation of hydrogen or synthesis gas.

In groups [C01B 3/12](#) - [C01B 3/18](#) and in groups [C01B 3/22](#) - [C01B 3/586](#), symbols of group [C01B 2203/00](#) should be added, for aspects relating to hydrogen or synthesis gas preparation processes.

## C01B 3/001

**{characterised by the uptaking medium; Treatment thereof}**

### Special rules of classification

In all of the groups [C01B 3/0026](#) - [C01B 3/0084](#), the metallic storage materials may contain minor quantities of non-metals such as B, C, O, S, Se, Si; e.g. [C01B 3/0036](#) "only containing iron and titanium" includes Fe-Ti compositions comprising a minor quantity of non-metals.

### Glossary of terms

*In this place, the following terms or expressions are used with the meaning indicated:*

Rare-earth metal	one single metal or a combination of metals selected from the lanthanides, Sc or Y.
------------------	---

## C01B 3/0015

**{Organic compounds; Solutions thereof}**

### Definition statement

*This place covers:*

Reversible uptake of hydrogen characterised by the uptaking medium being organic compounds, solutions thereof, e.g. metal organic frameworks

## C01B 3/0063

**{only containing a rare earth metal and only one other metal}**

### Glossary of terms

*In this place, the following terms or expressions are used with the meaning indicated:*

The "other metal"	is any other metal.
-------------------	---------------------

## C01B 3/0084

**{Solid storage mediums characterised by their shape, e.g. pellets, sintered shaped bodies, sheets, porous compacts, spongy metals, hollow particles, solids with cavities, layered solids}**

### Definition statement

*This place covers:*

Reversible uptake of hydrogen characterised by the shape of the solid storage uptaking medium, e.g. hydrogen storage in glass beads amongst others.

## C01B 3/025

{Preparation or purification of gas mixtures for ammonia synthesis}

### References

#### Informative references

Attention is drawn to the following places, which may be of interest for search:

Integration of a hydrogen producing process with ammonia synthesis.	<a href="#">C01B 2203/068</a>
Preparation or separation of ammonia.	<a href="#">C01C 1/02</a>

## C01B 3/04

by decomposition of inorganic compounds, e.g. ammonia {([C01B 3/0005](#) takes precedence)}

### References

#### Limiting references

This place does not cover:

Reversible uptake of hydrogen by an appropriate medium	<a href="#">C01B 3/0005</a>
--	-----------------------------

### Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Decomposition (as opposed to reaction):	there is only one reactant involved.
---	--------------------------------------

## C01B 3/06

by reaction of inorganic compounds containing electro-positively bound hydrogen, e.g. water, acids, bases, ammonia, with inorganic reducing agents (by electrolysis of water [C25B 1/04](#))

### References

#### Limiting references

This place does not cover:

Electrolysis of water	<a href="#">C25B 1/04</a>
-----------------------	---------------------------

### Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Reaction (as opposed to decomposition)	there are at least two reactants involved.
Silicon	is a metalloid and not a metal.

**C01B 3/08****with metals****Glossary of terms***In this place, the following terms or expressions are used with the meaning indicated:*

Metals	only refers to pure metals or metal alloys. Metal hydrides or metal oxides are not covered by this term.
Silicon	is a metalloid and not a metal.

**C01B 3/10****by reaction of water vapour with metals****Glossary of terms***In this place, the following terms or expressions are used with the meaning indicated:*

Metals	only refers to pure metals or metal alloys. Metal hydrides or metal oxides are not covered by this term.
Silicon	is a metalloid and not a metal.

**C01B 3/22****by decomposition of gaseous or liquid organic compounds ([C01B 3/0005](#) takes precedence) ; coking liquid carbonaceous materials [C10B 55/00](#))****Definition statement***This place covers:*

Production of hydrogen or gaseous mixtures containing hydrogen by decomposition of gaseous or liquid organic compounds or by an incomplete decomposition.

For example, a dehydrogenation specifically meant for the production of hydrogen will also be classified in this group.

**References****Informative references***Attention is drawn to the following places, which may be of interest for search:*

Coking liquid carbonaceous materials	<a href="#">C10B 55/00</a>
--------------------------------------	----------------------------

**Synonyms and Keywords***In patent documents, the following words/expressions are often used as synonyms:*

- "decomposition", "cracking" and "pyrolysis"

## C01B 3/32

by reaction of gaseous or liquid organic compounds with gasifying agents, e.g. water, carbon dioxide, air

### Special rules of classification

If the documents does not specify the type of gaseous or liquid organic compound further and if it is not mentioned whether a catalyst is used, classify in [C01B 3/32](#).

If it concerns a catalytic process, but if the type of gaseous or liquid organic compound is not further specified, then classify in [C01B 3/38](#) and subgroups or in [C01B 3/40](#).

## C01B 3/326

{characterised by the catalyst}

### Definition statement

*This place covers:*

Production of hydrogen or of gaseous mixtures containing hydrogen by catalytic reaction of gaseous or liquid organic compounds other than hydrocarbons with gasifying agents characterised by the catalyst.

### References

#### Informative references

Attention is drawn to the following places, which may be of interest for search:

Preparation and regeneration of catalysts	<a href="#">B01J 21/00</a> - <a href="#">B01J 38/00</a>
---	---

## C01B 3/382

{Multi-step processes}

### Definition statement

*This place covers:*

Multi-step process of hydrogen's or of gaseous mixtures containing hydrogen's production by catalytic reaction of hydrocarbons with gasifying agents, including also autothermal reforming.

### References

#### Informative references

Attention is drawn to the following places, which may be of interest for search:

Apparatus for autothermal reforming	<a href="#">B01J 8/00</a>
-------------------------------------	---------------------------

### Glossary of terms

*In this place, the following terms or expressions are used with the meaning indicated:*

Catalytic multi-step process	A catalytic multi-step process, that generates a hydrogen containing gas from a hydrocarbon, is a process including at least one catalytic step.
------------------------------	--

**C01B 3/384****{the catalyst being continuously externally heated}****Relationships with other classification places**Chemical or physical processes in general and their relevant apparatus are classified in [B01J](#)**Special rules of classification**

This class is only to be allocated when the external heating is explicitly mentioned.

**C01B 3/40****characterised by the catalyst****Definition statement***This place covers:*

Production of hydrogen or of gaseous mixtures containing hydrogen by catalytic reaction of gaseous or liquid organic compounds other than hydrocarbons with gasifying agents characterised by the catalyst.

**References****Informative references***Attention is drawn to the following places, which may be of interest for search:*

Preparation and regeneration of catalysts	<a href="#">B01J 21/00</a> - <a href="#">B01J 38/00</a>
---	---

**C01B 3/508****{by selective and reversible uptake by an appropriate medium, i.e. the uptake being based on physical or chemical sorption phenomena or on reversible chemical reactions (the appropriate mediums per se [C01B 3/0005](#))}****Definition statement***This place covers:*

This group covers separation or purification processes in which hydrogen or the hydrogen containing gas is removed from the gaseous mixtures

**References****Limiting references***This place does not cover:*

Reversible uptake of hydrogen by an appropriate medium.	<a href="#">C01B 3/0005</a>
Impurity and not hydrogen or the hydrogen containing gas is removed from the gaseous mixture.	<a href="#">C01B 3/56</a>

**C01B 3/56**

by contacting with solids; Regeneration of used solids {(C01B 3/508 takes precedence)}

**Definition statement**

*This place covers:*

The removal of one or more impurities from hydrogen or a hydrogen containing gas from the gaseous mixture.

**References****Limiting references**

*This place does not cover:*

Removal of hydrogen or hydrogen containing gas from the gaseous mixture.	<a href="#">C01B 3/508</a>
--	----------------------------

**C01B 4/00**

Hydrogen isotopes; Inorganic compounds thereof prepared by isotope exchange, e.g.  $\text{NH}_3 + \text{D}_2 \rightarrow \text{NH}_2\text{D} + \text{HD}$

**References****Informative references**

*Attention is drawn to the following places, which may be of interest for search:*

Separation of isotopes	<a href="#">B01D 59/00</a>
Other chemical reactions to form compounds of hydrogen isotopes	<a href="#">C01</a>

**C01B 5/00****Water****Definition statement**

*This place covers:*

This group only covers documents directed to the preparation of water, water being the product.

**References****Limiting references**

*This place does not cover:*

Arrangement of installations for producing fresh water, e.g. by evaporation and condensation of sea water.	<a href="#">B63J 1/00</a>
Treatment of water	<a href="#">C02F</a>
Fuel cell (production of electricity with water as side product)	<a href="#">H01M 8/00</a>

## C01B 6/00

Hydrides of metals {including fully or partially hydrided metals, alloys or intermetallic compounds (use of some thereof for reversible sorption of hydrogen [C01B 3/0005](#), [C01B 3/508](#)); Compounds containing at least one metal-hydrogen bond, e.g.  $(\text{GeH}_3)_2\text{S}$ ,  $\text{SiH GeH}$ }; Monoborane or diborane; Addition complexes thereof (higher hydrides of boron, substituted hydrides of boron [C01B 35/00](#))

### Definition statement

*This place covers:*

This group covers documents, in which metal hydrides are claimed per se and documents, in which the preparation of metal hydrides is disclosed.

### References

#### Informative references

*Attention is drawn to the following places, which may be of interest for search:*

Reversible uptake of hydrogen by an appropriate medium	<a href="#">C01B 3/0005</a>
Higher hydrides of boron than monoborane or diborane, substituted hydrides of boron	<a href="#">C01B 35/00</a>

### Glossary of terms

*In this place, the following terms or expressions are used with the meaning indicated:*

Metal hydride	Compound containing only metal or metal alloy and hydrogen.
---------------	---

## C01B 7/00

Halogens; Halogen acids (oxyacids [C01B 11/00](#))

### References

#### Limiting references

*This place does not cover:*

Oxyacids of halogens and salts thereof	<a href="#">C01B 11/00</a>
--	----------------------------

## C01B 9/00

General methods of preparing halides (particular individual halides, see the relevant groups in [C01B](#) - [C01G](#) according to the element combined with the halogen; electrolytic production of inorganic compounds [C25B](#))

### References

#### Limiting references

*This place does not cover:*

Electrolytic production of inorganic compounds	<a href="#">C25B</a>
--	----------------------

**Special rules of classification**

Particular individual halides according to the element combined with the halogen are classified in the relevant groups [C01B](#) - [C01G](#).

**C01B 11/00****Oxides or oxyacids of halogens; Salts thereof****Definition statement**

*This place covers:*

Oxides or oxyacids of halogens or salts thereof when claimed as such and the preparation thereof.

**C01B 13/00****Oxygen; Ozone; Oxides or hydroxides in general****Definition statement**

*This place covers:*

The preparation of oxygen, ozone, oxides and hydroxides.

**References****Informative references**

*Attention is drawn to the following places, which may be of interest for search:*

Use or ozone for disinfecting	<a href="#">A61L</a>
-------------------------------	----------------------

**C01B 13/02****Preparation of oxygen (by liquefying [F25J](#))****References****Informative references**

*Attention is drawn to the following places, which may be of interest for search:*

Enrichment of a gaseous mixture, in particular air, in oxygen or separation of oxygen from a gaseous mixture by an adsorption process	<a href="#">B01D63/03</a>
Enrichment of a gaseous mixture, in particular air, in oxygen or separation of oxygen from a gaseous mixture by liquefying	<a href="#">F25J</a>

**C01B 13/0229****{Purification or separation processes}****Definition statement**

*This place covers:*

Purification and separation processes related to the production of oxygen

## References

### Informative references

Attention is drawn to the following places, which may be of interest for search:

Processes and apparatus in general for separation	<a href="#">B01D</a>
---	----------------------

### Special rules of classification

In groups [C01B 13/0229](#) - [C01B 13/0288](#), additional features relating to the purification or separation processes are indexed with symbols chosen from [C01B 2210/0026](#) - [C01B 2210/0098](#).

## C01B 13/0288

### {Combined chemical and physical processing}

## References

### Informative references

Attention is drawn to the following places, which may be of interest for search:

Processes and apparatus in general for separation	<a href="#">B01D</a>
Chemical or physical processes, e.g. catalysts, colloid chemistry; their relevant apparatus	<a href="#">B01J</a>

### Special rules of classification

In this group, processing steps are also classified with symbols chosen from [C01B 2210/0001](#) - [C01B 2210/0025](#).

## C01B 13/10

### Preparation of ozone

### Special rules of classification

When ozone is produced by generation of a plasma, the document is classified in [C01B 13/10](#) and not in [C01B 13/11](#).

## C01B 13/11

### by electric discharge

### Relationships with other classification places

Process for preparation of ozone and its apparatus are classified in [C01B 13/11](#) subgroups.

Devices for providing corona discharge are classified in [H01T 19/00](#) subgroups.

Process for preparation of ozone by ultraviolet light, the apparatus is also classified in [B01J 19/123](#)

### Special rules of classification

When ozone is produced by generation of a plasma, the document is classified in [C01B 13/10](#) and not in [C01B 13/11](#).

In groups [C01B 13/11](#) and [C01B 13/115](#), additional features relating to the preparation of ozone by electrical discharge are classified with symbols chosen from [C01B 2201/00](#) - [C01B 2201/90](#).

## C01B 13/14

Methods for preparing oxides or hydroxides in general (particular individual oxides or hydroxides, see the relevant groups of subclasses [C01B](#) - [C01G](#) or [C25B](#), according to the element combined with the oxygen or hydroxy group)

### Definition statement

*This place covers:*

Methods for preparing (hydr)oxides in general, not specific to a particular (hydr)oxide

### Relationships with other classification places

Particular individual oxides or hydroxides are classified in the relevant groups of subclasses [C01B](#) - [C01G](#) or [C25B](#), according to the element combined with the oxygen or hydroxy group

### References

#### Limiting references

*This place does not cover:*

Generic features dealing with the preparation of (hydr)oxides of sodium, potassium or alkali metals	<a href="#">C01D 1/00</a>
Generic features dealing with the preparation of (hydr)oxides of metals not covered by <a href="#">C01B</a> , <a href="#">C01D</a> or <a href="#">C01E</a>	<a href="#">C01G 1/02</a>
Preparation of (hydr)oxides by electrolysis	<a href="#">C25B 1/00</a>

### Special rules of classification

Contrary to the strict interpretation of the wording of the groups of [C01](#) does this group dealing with the preparation of (hydr)oxides also comprise the after-treatment ([C01B 13/145](#)) and the purification ([C01B 13/16](#)).

## C01B 13/145

{After-treatment of oxides or hydroxides, e.g. pulverising, drying, decreasing the acidity}

### References

### Purification

### Definition statement

*This place covers:*

All methods for purification of oxides or hydroxides in general

## References

### Limiting references

*This place does not cover:*

The purification of specific oxides (see the relevant class of [C01D-C01G](#)), e.g.:

Of aluminium (hydr)oxides:	<a href="#">C01F 7/46</a>
Of calcium, strontium or barium oxides:	<a href="#">C01F 11/16</a>

### Informative references

*Attention is drawn to the following places, which may be of interest for search:*

Processes and apparatus in general for separation	<a href="#">B01D</a>
---	----------------------

## Special rules of classification

The purity of compounds in solid compounds in [C01](#) is also covered by the group [C01P 2006/80](#)

## C01B 13/18

**by thermal decomposition of compounds, e.g. of salts or hydroxides**

### Definition statement

*This place covers:*

The decomposition by application of heat without the addition of other reactants. Starting solutions can be sprayed but the obtained dried precursor is subsequently in a separate step decomposed by heat.

## References

### Limiting references

*This place does not cover:*

The one-step conversion of sprayed or atomized solutions	<a href="#">C01B 13/34</a>
--	----------------------------

## C01B 13/20

**by oxidation of elements in the gaseous state; by oxidation or hydrolysis of compounds in the gaseous state**

### Definition statement

*This place covers:*

The oxidation or hydrolysis of metal (oxy)halides only.

## References

### Limiting references

*This place does not cover:*

Oxidation or hydrolysis of metal-organic compounds (e.g. alkoxides)	<a href="#">C01B 13/20</a>
---	----------------------------

## C01B 13/32

by oxidation or hydrolysis of elements or compounds in the liquid or solid state {or in non-aqueous solution, e.g. sol-gel process}

### Definition statement

*This place covers:*

The oxidation or hydrolysis of (e.g. organic) metal compounds, in pure form ('in the liquid state' in subgroup [C01B 13/326](#)) or dissolved in a non-aqueous (e.g. alcohol) solution ('in solution'). The 'sol-gel process' is classified in here.

### References

#### Limiting references

*This place does not cover:*

Precipitation reactions in aqueous solutions:	<a href="#">C01B 13/36</a>
---	----------------------------

## C01B 13/34

by oxidation or hydrolysis of sprayed or atomised solutions

### References

#### Limiting references

*This place does not cover:*

Processes whereby after spraying a precursor is obtained (e.g. a salt) which is subsequently decomposed into the oxide in a separate furnace:	<a href="#">C01B 13/18</a>
---	----------------------------

## C01B 13/36

by precipitation reactions in {aqueous} solutions {([C01B 13/328](#) takes precedence)}

### Definition statement

*This place covers:*

Precipitation reactions, e.g. from a metal salt by adding a base like NaOH or NH<sub>3</sub>

### References

#### Limiting references

*This place does not cover:*

Groups comprises reactions in non-aqueous solutions. Hydrolysis of (organic) starting materials in e.g. alcohols by the sol-gel process, see [C01B 13/32](#).

**C01B 13/363****{Mixtures of oxides or hydroxides by precipitation}****Definition statement***This place covers:*

Mixtures of oxides or hydroxides including mixed (hydr)oxides, i.e. plural metal oxides or hydroxides and also mixtures of metal oxides and hydroxides

**C01B 13/366****{by hydrothermal processing}****Definition statement***This place covers:*

Processes whereby a pressure above one bar is realised by heating an aqueous solution above 100°C in a closed container (autoclave).

**Synonyms and Keywords**

Closed reaction container	autoclave
---------------------------	-----------

**C01B 15/00****Peroxides; Peroxyhydrates; Peroxyacids or salts thereof; Superoxides; Ozonides****Definition statement***This place covers:*

Peroxides, peroxyhydrates, peroxyacids and salts thereof, superoxides and ozonides when claimed as such and the preparation processes thereof.

**C01B 17/00****Sulfur; Compounds thereof****Definition statement***This place covers:*

Compositions consisting of elemental sulfur or of sulfur compounds as far as not classified in groups following [C01B 17/98](#) according to the other elements (like transition metals) present. This groups includes preparations of such compositions as well as after-treatments in general, thus in so far these are not limited to one specific application. Also included are apparatus specially adapted to the preparation.

**C01B 17/02****Preparation of sulfur; Purification****Definition statement***This place covers:*

Preparation of elemental sulfur only.

**C01B 17/021****{Separation of sulfur from gases}****References****Limiting references***This place does not cover:*

As part of the Claus process:	<a href="#">C01B 17/0447</a>
-------------------------------	------------------------------

**Informative references***Attention is drawn to the following places, which may be of interest for search:*

Processes and apparatus in general for separation	<a href="#">B01D</a>
---	----------------------

**C01B 17/0221****{Melting}****Definition statement***This place covers:*

e.g. block melting

**C01B 17/0232****{Purification, e.g. degassing}****Definition statement***This place covers:*

All types of removal of all kind of impurities irrespective the source of the sulfur.

**References****Limiting references***This place does not cover:*

Purification of sulfur obtained from materials comprising elemental sulfur:	<a href="#">C01B 17/027</a>
---	-----------------------------

**Informative references***Attention is drawn to the following places, which may be of interest for search:*

Processes and apparatus in general for separation	<a href="#">B01D</a>
---	----------------------

Granulation in general	<a href="#">B01J 2/00</a>
------------------------	---------------------------

**C01B 17/0253****{from non-gaseous sulfur compounds other than sulfides or materials containing such sulfides}****References****Informative references***Attention is drawn to the following places, which may be of interest for search:*

Sulfur from H <sub>2</sub> S or H <sub>2</sub> S-containing gases:	<a href="#">C01B 17/04</a>
Sulfur from SO <sub>2</sub> or SO <sub>2</sub> -containing gases:	<a href="#">C01B 17/0473</a>

**C01B 17/027****Recovery of sulfur from material containing elemental sulfur, e.g. luxmasses {or sulfur containing ores}; Purification {of the recovered sulfur}****References****Limiting references***This place does not cover:*

Purification of sulfur in general or obtained by other methods:	<a href="#">C01B 17/0232</a>
---	------------------------------

**C01B 17/04****from gaseous sulfur compounds including gaseous sulfides****Definition statement***This place covers:*All process whereby the sulfur source is a gaseous sulfur compound, e.g. H<sub>2</sub>S, SO<sub>2</sub>**References****Informative references***Attention is drawn to the following places, which may be of interest for search:*

Catalytic removal of sulfur compounds from gas streams in general:	<a href="#">B01D 53/8603</a>
--	------------------------------

## C01B 17/0404

{by processes comprising a dry catalytic conversion of hydrogen sulfide-containing gases, e.g. the Claus process}

### Definition statement

*This place covers:*

- This subgroup covers also other processes than the Claus process.
- This group includes also specific steps not classifiable in the subgroups [C01B 17/0408](#) - [C01B 17/0469](#) according to the characterising features of these steps, e.g. heat exchangers not being part of a combustion furnace.
- Features which relate to several separate steps of the Claus process are classified in [C01B 17/0404](#), e.g. parts of flow sheets (like gas lines connecting separate steps).

### References

#### Limiting references

*This place does not cover:*

Obtaining sulfur from gaseous compounds by wet processing:	<a href="#">C01B 17/05</a>
Processes for the removal of H <sub>2</sub> S from gas streams whereby the H <sub>2</sub> S is present as an impurity:	<a href="#">B01D 53/8603</a>

### Special rules of classification

- Features relating to specific steps of the Claus process are classified in the subgroups [C01B 17/0408](#)-[C01B 17/0456](#).
- Specific steps not classifiable in the subgroups according to the characterising features of these steps (e.g. heat exchangers not being part of a combustion furnace) are classified in [C01B 17/0404](#).
- Features which relate to several separate steps of the Claus process are classified in [C01B 17/0404](#), e.g. details of flow sheets (like gas lines connecting separate steps).

## C01B 17/0408

{Pretreatment of the hydrogen sulfide containing gases}

### Definition statement

*This place covers:*

All kind of operations applied to the feed gas, e.g. concentration by absorption, adsorption or purification (removal of non-sulfur components).

## C01B 17/0413

{characterised by the combustion step}

### Definition statement

*This place covers:*

E.g. the thermal step of the Claus process.

**C01B 17/0417****{Combustion reactors}****Definition statement**

*This place covers:*

Only constructional features of the reactor, including waste heat boilers and the like connected therewith.

**References****Informative references**

*Attention is drawn to the following places, which may be of interest for search:*

Reactors in general:	<a href="#">B01J 8/00</a>
----------------------	---------------------------

**Glossary of terms**

*In this place, the following terms or expressions are used with the meaning indicated:*

Combustion reactor	thermal Claus furnace
--------------------	-----------------------

**C01B 17/0421****{Multistage combustion}****Definition statement**

*This place covers:*

Only multi-combustion in two separate furnaces.

**Special rules of classification**

Two oxidizer gas flows to one single reactor is classified in [C01B 17/0413](#) (or [C01B 17/0417](#) when it concerns the reactor).

**C01B 17/043****{Catalytic converters}****References****Informative references**

*Attention is drawn to the following places, which may be of interest for search:*

Chemical or biological purification of engine exhaust gases	<a href="#">B01D 53/00</a>
Reactors in general	<a href="#">B01J 8/00</a>
Exhaust apparatus having means for purifying exhaust gases	<a href="#">F01N 3/00</a>

**C01B 17/0434****{Catalyst compositions}****Definition statement***This place covers:*

The compositions are considered to include supports.

**References****Informative references***Attention is drawn to the following places, which may be of interest for search:*

Catalytic compositions in general:	<a href="#">B01J</a>
------------------------------------	----------------------

**Special rules of classification**Mechanical adaptations of the catalytic reactor for comprising the catalyst are classified in [C01B 17/043](#).**C01B 17/0439****{at least one catalyst bed operating below the dew-point of sulfur}****Definition statement***This place covers:*

- All those processes whereby sulfur (liquid or solid) remains in or at the catalyst. This group comprises also measures for the regeneration of the sulfur-loaded catalyst.
- E.g. CBA (Cold Bed Absorption), MCRC (Maximum Claus Recovery Concept), Sulfreen or Maxisulf.
- Clinsulf can also be operated at sub-dew point conditions.

**C01B 17/0443****{in a moving bed}****Glossary of terms***In this place, the following terms or expressions are used with the meaning indicated:*

Moving bed	e.g. fluidized bed
------------	--------------------

**C01B 17/0447****{Separation of the obtained sulfur}****Definition statement***This place covers:*

Measures dealing with the separation of the elemental sulfur after one or more of the separate steps of e.g. the Claus process.

## References

### Limiting references

*This place does not cover:*

Purification of the separated sulfur	<a href="#">C01B 17/0232</a>
--------------------------------------	------------------------------

## C01B 17/0452

{Process control; Start-up or cooling-down procedures of the Claus process}

### Definition statement

*This place covers:*

E.g. adjustment of ratio of gas stream components.

## C01B 17/0456

{the hydrogen sulfide-containing gas being a Claus process tail gas}

### Definition statement

*This place covers:*

Those processes whereby the tail gas from a Claus process plant are reused for obtaining sulfur, e.g. by concentration of H<sub>2</sub>S or reduction of SO<sub>2</sub> present in the tail gas.

## References

### Limiting references

*This place does not cover:*

Removal of sulfur compounds from Claus tail gases without obtaining elemental sulfur:	<a href="#">B01D 53/8603</a>
---	------------------------------

## C01B 17/046

{without intermediate formation of sulfur dioxide}

### Definition statement

*This place covers:*

- These processes are also indicated as selective oxidation or direct oxidation of H<sub>2</sub>S.
- E.g. 'Superclaus'-processes comprising thermal and catalytic Claus steps combined with a selective oxidation step.

### Glossary of terms

*In this place, the following terms or expressions are used with the meaning indicated:*

Without intermediate formation of sulfur	selective oxidation or direct oxidation
--	---

**C01B 17/0465****{Catalyst compositions}****References*****Informative references****Attention is drawn to the following places, which may be of interest for search:*

Catalysts in general:	<a href="#">B01J</a>
-----------------------	----------------------

**C01B 17/0469****{at least one catalyst bed operating below the dew-point of sulfur}****Definition statement***This place covers:*

E.g. Clauspol process.

**References*****Limiting references****This place does not cover:*

Subdew-point process as part of the Claus process:	<a href="#">C01B 17/0439</a>
--	------------------------------

**C01B 17/0473****{by reaction of sulfur dioxide or sulfur trioxide containing gases with reducing agents other than hydrogen sulfide}****Definition statement***This place covers:*Reaction of SO<sub>2</sub> or SO<sub>3</sub> with all kind of reducing agents, gaseous, liquid or solid.**C01B 17/0478****{with hydrocarbons or mixtures containing them}****Definition statement***This place covers:*Reduction of SO<sub>2</sub>, e.g. with natural gas.**C01B 17/0495****{by dissociation of hydrogen sulfide into the elements}****Special rules of classification**Classification is also accomplished in [C01B 3/04](#) because of the produced hydrogen.

**C01B 17/05****by wet processes****Definition statement***This place covers:*

- This group comprises all processes comprising a liquid step, independent of the character of the liquid.
- E.g. iron chelate processes.

**References****Limiting references***This place does not cover:*

Removal of sulfur compounds from gases without obtaining elemental sulfur	<a href="#">B01D 53/52</a>

Processes and apparatus for separation in general	<a href="#">B01D</a>
---	----------------------

**C01B 17/168****{Purification}****Definition statement***This place covers:*Removal of all kind of impurities (gaseous, liquid or solid) from H<sub>2</sub>S.**References****Limiting references***This place does not cover:*

The removal of large amounts of components qualified as impurities is regarded to represent a separation of H <sub>2</sub> S from that gas stream (e.g. 70% impurity, 30% H <sub>2</sub> S) and is classified in	<a href="#">C01B 17/167</a>
--	-----------------------------

**C01B 17/18****Hydrogen polysulfides****Definition statement***This place covers:*All compounds H<sub>2</sub>S<sub>1+x</sub>, wherein x>0**C01B 17/20**

**Methods for preparing sulfides or polysulfides, in general (ammonium sulfides or polysulfides [C01C](#); sulfides or polysulfides of metals, other than alkali metals, magnesium, calcium, strontium and barium, see the relevant groups of subclasses [C01F](#) or [C01G](#), according to the metal)**

**Definition statement***This place covers:*

Methods for preparing sulfided or polysulfides in general, not specific to the chemical nature of the (poly)sulfide.

## Relationships with other classification places

- Ammonium (poly)sulfides: [C01C 1/20](#)
- Methods relating to one specific metal sulfide are classified according to the metal: [C01D](#), [C01F](#) or [C01G](#)

## Special rules of classification

All documents in this group and its subgroups are classified in the [C01P](#) subgroups

## C01B 17/22

### Alkali metal sulfides or polysulfides

#### Special rules of classification

All documents in this group and its subgroups are classified in the [C01P](#) subgroups

#### Glossary of terms

*In this place, the following terms or expressions are used with the meaning indicated:*

Polysulfides	all compounds $\text{Me}_2\text{S}_{1+x}$ , with $x>0$
--------------	--

## C01B 17/34

### Polysulfides of sodium or potassium

#### Definition statement

*This place covers:*

All compounds  $\text{Me}_2\text{S}_{1+x}$ , with  $x>0$ ,  $\text{Me}=\text{Na},\text{K}$

#### Glossary of terms

*In this place, the following terms or expressions are used with the meaning indicated:*

Polysulfides	All compounds $\text{Me}_2\text{S}_{1+x}$ , with $x>0$ , $\text{Me}=\text{Na},\text{K}$
--------------	---

## C01B 17/42

### Sulfides or polysulfides of magnesium, calcium, strontium, or barium

#### References

##### Informative references

### Isolation of sulfur dioxide from gases

#### Special rules of classification

See also [C01B 17/56](#)

## C01B 17/62

Methods of preparing sulfites in general (particular individual sulfites, see the relevant groups of subclasses [C01B](#) - [C01G](#), according to the cation)

### Definition statement

*This place covers:*

Methods of preparing sulfites in general and not specific to the chemical nature of the sulfite.

### References

#### Limiting references

*This place does not cover:*

Specific sulfites are classified according to the metal	<a href="#">C01B</a> , <a href="#">C01D</a> , <a href="#">C01F</a> , <a href="#">C01G</a>
---	--

## C01B 17/625

{metabisulfites or pyrosulfites}

### Glossary of terms

*In this place, the following terms or expressions are used with the meaning indicated:*

Metabisulfites or pyrosulfites	S 2O 52-
--------------------------------	----------

## C01B 17/64

Thiosulfates; Dithionites; Polythionates

### Glossary of terms

*In this place, the following terms or expressions are used with the meaning indicated:*

Thiosulfates	S 2O 32-
lthionites (=hydrosulfites)	S 2O 42-

## C01B 17/66

Dithionites {or hydrosulfites ( $S_2O_4^{2-}$ )}

### Glossary of terms

*In this place, the following terms or expressions are used with the meaning indicated:*

Dithionites (=hydrosulfites)	S 2O 42-
------------------------------	----------

## C01B 17/69

### Sulfur trioxide; Sulfuric acid

#### Definition statement

*This place covers:*

All features in relation to SO<sub>3</sub> or H<sub>2</sub>SO<sub>4</sub> not classifiable in the subgroups of [C01B 17/69](#).

## C01B 17/74

### Preparation

#### Definition statement

*This place covers:*

All documents dealing with preparative features not classifiable in the subgroups of [C01B 17/74](#).

## C01B 17/76

### by contact processes

#### Definition statement

*This place covers:*

All catalytic processes for the oxidation of SO<sub>2</sub> into SO<sub>3</sub>. This group comprises features not classifiable in the subgroups of [C01B 17/76](#).

In the contact processes the contact is the catalyst (a solid), it's then a gas/gas reactions in presence of a solid.

#### References

##### Informative references

*Attention is drawn to the following places, which may be of interest for search:*

Processes and apparatus in general for separation	<a href="#">B01D</a>
Chemical or physical processes	<a href="#">B01J</a>

## C01B 17/765

### Multi-stage SO<sub>3</sub>-conversion

#### Definition statement

*This place covers:*

All conversion which includes more than one catalyst bed ('contact'), irrespective of whether they are present in one convertor or in several convertors.

**C01B 17/7655****{with intermediate absorption}****Definition statement***This place covers:*

All processes where in addition to the final absorber at least one other SO<sub>3</sub>-absorption is present between the catalytic beds.

**C01B 17/901**

**{Recovery from spent acids containing metallic ions, e.g. hydrolysis acids, pickling acids (obtaining sulfur dioxide as an intermediate in sulfur trioxide recovery from sulfates, e.g. iron sulfates [C01B 17/501](#), from spent acids [C01B 17/58](#))}**

**Definition statement***This place covers:*

The presence in the starting solution of metallic ions is essential

**References****Limiting references***This place does not cover:*

From sulfates whereby SO <sub>2</sub> is obtained	<a href="#">C01B 17/501</a>
From spent acids	<a href="#">C01B 17/58</a>

**C01B 17/902****{by dialysis}****Special rules of classification**

Removal of some specific impurities are classified in [C01B 17/905-C01B 17/908](#).

**C01B 17/903****{by liquid-liquid extraction}****Special rules of classification**

Removal of some specific impurities are classified in [C01B 17/905-C01B 17/908](#).

**C01B 17/904****{by ion-exchange}****Relationships with other classification places**

Separating processes in general involving the treatment of liquids with ion exchange materials as adsorbents are classified in **B01D15/04**

**Special rules of classification**

Removal of some specific impurities are classified in [C01B 17/905-C01B 17/908](#).

**C01B 17/905**

{Removal of organic impurities}

**Definition statement**

*This place covers:*

Purification of sulfuric acid in which the impurity is present.

**Special rules of classification**

See also [C01B 17/92](#) in case of a mixture of acid and organic compounds.

**C01B 17/96**

**Methods for the preparation of sulfates in general (particular individual sulfates, see the relevant groups of subclasses [C01B](#) - [C01G](#), according to the cation)**

**Definition statement**

*This place covers:*

Methods for the preparation of sulfates in general, and not specific to the chemical nature of the sulfate.

**References****Limiting references**

*This place does not cover:*

Processes or apparatus for the preparation of specific sulfates are classified according to the metal ion	<a href="#">C01B</a> , <a href="#">C01D</a> , <a href="#">C01E</a> , <a href="#">C01G</a>
---	--

**C01B 17/965**

{Pyrosulfates}

**Glossary of terms**

*In this place, the following terms or expressions are used with the meaning indicated:*

Pyrosulfate	2O 72-
-------------	--------

**C01B 17/98**

Other compounds containing sulfur and oxygen (persulfuric acids [C01B 15/06](#); persulfates [C01B 15/08](#))

**References****Limiting references**

*This place does not cover:*

Persulfuric acid	<a href="#">C01B 15/06</a>
Persulfates	<a href="#">C01B 15/08</a>

**C01B 19/00**

Selenium; Tellurium; Compounds thereof (phosphorus compounds [C01B 25/14](#))

**References****Limiting references**

*This place does not cover:*

Compounds containing also phosphorous	<a href="#">C01B 25/14</a>
---------------------------------------	----------------------------

**Special rules of classification**

All documents in this group and its subgroups (so [C01B 19/00](#) - [C01B 19/04](#)) are classified with symbols chosen from [C01P](#)-subgroups

**C01B 19/002**

{Compounds containing, besides selenium or tellurium, more than one other element, with -O- and -OH not being considered as anions}

**Definition statement**

*This place covers:*

The compounds classified in this group do have more than one element other than Se or Te, O and H not taken into account. The compounds with only one other element do find classification in the subgroups of this group.

**References****Limiting references**

*This place does not cover:*

Compounds of Se or Te with only one other element, O and H not taken into account	<a href="#">C01B 19/004</a> - <a href="#">C01B 19/04</a>
---	---

**C01B 19/007**

----------------------------	----------------------------

### Special rules of classification

During classification are additional features classified using the groups [C01B 2210/00-](#)  
[C01B 2210/0098](#) . Example of such features is the type of impurity removed ([C01B 2210/0043](#)).

**C01B 21/0411****{Chemical processing only}****Definition statement***This place covers:*

Those processes comprising only chemical methods as e.g. specified by the subgroups [C01B 21/0416](#)- [C01B 21/0427](#).

**C01B 21/0416****{by oxidation}****Definition statement***This place covers:*

Chemical oxidation processes such as the removal of hydrogen by addition of oxygen to the feed gas. The impurity is oxidized.

**C01B 21/0422****{by reduction}****Definition statement***This place covers:*

Chemical reduction processes such as the removal of oxygen by addition of a reducing agent, like hydrogen. The impurity is reduced.

**C01B 21/0433****{Physical processing only}****Definition statement***This place covers:*

Those processes comprising only physical methods as e.g. specified by the subgroups [C01B 21/0438](#)- [C01B 21/0488](#).

**C01B 21/0438****{by making use of membranes}****References****Informative references**

Attention is drawn to the following places, which may be of interest for search:

Membranes as such:	<a href="#">B01D 61/00</a> - <a href="#">B01D 71/00</a>
--------------------	---

**Synonyms and Keywords**

Pressure swing absorption	PSA
---------------------------	-----

## C01B 21/0455

{characterised by the adsorbent}

### References

#### Limiting references

*This place does not cover:*

Solid sorbents compositions per se	<a href="#">B01J 20/00</a>
------------------------------------	----------------------------

## C01B 21/0477

{Temperature swing adsorption}

### Glossary of terms

*In this place, the following terms or expressions are used with the meaning indicated:*

TSA	temperature swing adsorption
-----	------------------------------

## C01B 21/0494

{Combined chemical and physical processing}

### Definition statement

*This place covers:*

All processes comprising a sequence of steps each covered by the groups [C01B 21/0411](#)-[C01B 21/0488](#)

### Special rules of classification

All processes comprising a sequence of steps each covered by the groups [C01B 21/0411](#)-[C01B 21/0488](#) do get this symbol [C01B 21/0494](#) in combination with symbols for the individual steps chosen from [C01B 2210/00](#)-[C01B 2210/0025](#). Additional treatment steps which are the result of the main treatment operation are not recognised as separate step (e.g. removal of water by an adsorption step after the reductive treatment with hydrogen for the removal of oxygen during which the water is formed).

Groups for the type of impurity removed ([C01B 2210/0043](#)) are always applied as complete as possible.

## C01B 21/06

**Binary compounds of nitrogen with metals, with silicon, or with boron, {or with carbon, i.e. nitrides; Compounds of nitrogen with more than one metal, silicon or boron} (azides [C01B 21/08](#))**

### References

#### Limiting references

*This place does not cover:*

Azides	<a href="#">C01B 21/08</a>
--------	----------------------------

Shaped bodies made of nitrides:	<a href="#">C04B 35/58</a> and subgroups
---------------------------------	--

### Special rules of classification

- A document specifying a series of binary compounds (e.g. more than 5) is classified in this group with groups chosen from [C01B 21/06-C01B 21/076](#) for the individual compounds.
- All documents of this group and its subgroups up to [C01B 21/0768](#) are fully classified with the symbols chosen from [C01P](#) subgroups.

## C01B 21/0602

{with two or more other elements chosen from metals, silicon or boron}

### Definition statement

*This place covers:*

E.g. mixed nitrides.

## C01B 21/0605

{Binary compounds of nitrogen with carbon}

### Definition statement

*This place covers:*

All compounds between carbon and nitrogen, C<sub>x</sub>N<sub>y</sub>

## C01B 21/0632

{with gallium, indium or thallium}

### Relationships with other classification places

Preparing single crystals of GaN: [C30B](#)

## C01B 21/0641

{Preparation by direct nitridation of elemental boron}

### Definition statement

*This place covers:*

Nitridation can take place by any nitrogen source, e.g. nitrogen, ammonia.

## C01B 21/0645

{Preparation by carboreductive nitridation}

### Definition statement

*This place covers:*

Processes whereby the boron oxide source is reduced with a carbon containing material like graphite or active carbon, carbon being elemental or not

**C01B 21/0646****{Preparation by pyrolysis of boron and nitrogen containing compounds}****Definition statement***This place covers:*

Processes in which the nitrogen is provided by the precursor, although the reaction can take place in an ammonia or nitrogen containing atmosphere.

**C01B 21/0648****{After-treatment, e.g. grinding, purification (transformation of hexagonal into cubic or wurtzitic boron nitride [C04B 35/5831](#))}****References****Limiting references***This place does not cover:*

Solvent extraction in general	<a href="#">B01D 11/00</a>
-------------------------------	----------------------------

## C01B 25/461

{the phosphoric acid present in the medium obtained after reaction being first extracted from the liquid phase formed or separated then re-extracted as free acid by using water or as a phosphate by using a basic compound (selective extraction of impurities contained in acid [C01B 25/237](#))}

### References

#### Limiting references

*This place does not cover:*

Selective extraction of impurities contained in acid	<a href="#">C01B 25/237</a>
--	-----------------------------

### Special rules of classification

- The extracting agent may be diluted with a compound or a mixture of compounds which are not solvents for phosphoric acid, e.g. a hydrocarbon.
- Documents which belong to more than one subgroup of [C01B 25/462](#) - [C01B 25/466](#) are classified in combination, C-set used, e.g. [C01B 25/462](#), [C01B 25/463](#), [C01B 25/465](#).

## C01B 25/468

{the extraction being performed on the reaction slurry itself, i.e. without separating the acid ([C01B 25/232](#) takes precedence)}

### Special rules of classification

[C01B 25/232](#) takes precedence

## C01B 32/00

Carbon; Compounds thereof ([C01B 21/00](#), [C01B 23/00](#) take precedence; percarbonates [C01B 15/10](#); carbon black [C09C 1/48](#))

### Definition statement

*This place covers:*

Carbon and inorganic compounds thereof. Included in this group are processes and apparatus used in obtaining these products.

Preparation of carbonyl fluoride or carbonyl bromide.

### Relationships with other classification places

[C01B 32/60](#) covers preparation of carbonates or bicarbonates in general. Percarbonates are covered by [C01B 15/10](#) and particular individual carbonates are covered by the relevant groups in [C01B-C01G](#) according to the cation.

### References

#### Limiting references

*This place does not cover:*

Percarbonates	<a href="#">C01B 15/10</a>
Carbon black	<a href="#">C09C 1/48</a>

Separation of gases or vapours by absorption	<a href="#">B01D 53/14</a>
Separation of gases or vapours by diffusion	<a href="#">B01D 53/22</a>
Processes of preparing urea or its derivatives	<a href="#">C07C 273/00</a>
Purifying or modifying the chemical composition of combustible gases containing carbon monoxide	<a href="#">C10K</a>
Processes or apparatus for liquefying or solidifying gases or gaseous mixtures	<a href="#">F25J 1/00</a>
Processes or apparatus for separating the constituents of gaseous mixtures involving the use of liquefaction or solidification	<a href="#">F25J 3/00</a>

### Special rules of classification

In this main group and the subclass [C01B](#), the last place priority rule is applied, i.e. at each hierarchical level, in the absence of an indication to the contrary, a compound is classified in the last appropriate place, however, the main groups [C01B 21/00](#) and [C01B 23/00](#) take precedence over this main group.

Preparation of intercalation compounds of graphite with fluorine are classified in [C01B 32/22](#).

## C01B 32/05

Preparation or purification of carbon not covered by groups [C01B 32/15](#), [C01B 32/20](#), [C01B 32/25](#), [C01B 32/30](#)

### Definition statement

*This place covers:*

Preparation or purification of carbon products not referred to in [C01B 32/15](#), [C01B 32/20](#), [C01B 32/25](#) or [C01B 32/30](#), e.g. carbon gel, carbon aerogel, mesoporous carbon, ordered porous carbon or carbon.

### References

#### Informative references

*Attention is drawn to the following places, which may be of interest for search:*

Processes of growing single crystal carbon or homogeneous polycrystalline carbon	<a href="#">C30B</a>

## C01B 32/152

### Fullerenes

#### Definition statement

*This place covers:*

All types of fullerenes, and their preparation; after-treatments thereof, e.g. purification, sorting, functionalization or dispersion in solvents.

#### Glossary of terms

*In this place, the following terms or expressions are used with the meaning indicated:*

Fullerene	Molecule composed entirely of carbon in the form of a hollow sphere
Buckminsterfullerene	Spherical molecule with the formula C <sub>60</sub>
Endohedral fullerene	Fullerene comprising an element inserted into the fullerene cage

#### Synonyms and Keywords

*In patent documents, the word/expression in the first column is often used instead of the word/expression in the second column, which is used in the classification scheme of this place:*

Fullerene	Buckyball
-----------	-----------

## C01B 32/158

### Carbon nanotubes

#### References

##### Informative references

Attention is drawn to the following places, which may be of interest for search:

Fine structural details of nanotubes	<a href="#">C01P 2004/13</a>
Coating by vacuum evaporation, by sputtering or by ion implantation of the coating material	<a href="#">C23C 14/00</a>
Chemical coating by decomposition of gaseous compounds, without leaving reaction products of surface material in the coating	<a href="#">C23C 16/00</a>

#### Special rules of classification

All documents in [C01B 32/158-C01B 32/178](#) are classified with symbols chosen from [C01B 2202/00](#) - [C01B 2202/36](#) to report structural aspects or properties of carbon nanotubes.

Mere references to "carbon nanotubes" in a document in the absence of other details do not lead to a classification in [C01B 32/158](#). For example, a reference to a "carbon nanotube" grown on a substrate used for a semiconductor device is not sufficient for requiring a classification in [C01B 32/158](#). If, however, the document includes specific details on how the nanotube is produced, treated, modified or purified which do not seem trivial, then the document is classified in [C01B 32/158](#) - [C01B 32/178](#). In other terms, documents referring to carbon nanotubes are not automatically classified in [C01B 32/00](#) unless there is emphasis, e.g. on the nanotube growing technique or the after-treatment.

#### Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Carbon nanotubes	Described as graphene sheets rolled up into the shape of a cylinder
------------------	---

#### Synonyms and Keywords

In patent documents, the word/expression in the first column is often used instead of the word/expression in the second column, which is used in the classification scheme of this place:

Nanotubes	Buckytubes
-----------	------------

## C01B 32/162

### characterised by catalysts

#### Definition statement

This place covers:

Catalysts, from which nanotubes were grown, e.g. composition, distribution, particle size or morphology.

## C01B 32/164

involving continuous processes

### References

#### Informative references

Attention is drawn to the following places, which may be of interest for search:

Production of carbon nanotubes in batches	<a href="#">C01B 32/16</a> , <a href="#">C01B 32/162</a> or <a href="#">C01B 32/166</a>
---	---

## C01B 32/168

After-treatment

### Definition statement

*This place covers:*

After-treatments not addressed in [C01B 32/17-C01B 32/178](#), e.g. coating of carbon nanotubes.

### References

#### Informative references

Attention is drawn to the following places, which may be of interest for search:

Coatings of a carbon nanotube by a layer or a film, e.g. by a metallic layer or an oxide layer (to form a layered product)	<a href="#">B32B</a>
--	----------------------

## C01B 32/172

Sorting

### Definition statement

*This place covers:*

Methods for sorting or isolating as-grown mixtures of carbon nanotubes according to their (n, m) structural form, e.g. diameter, bandgap or electronic type (metallic versus semiconducting).

## C01B 32/178

Opening; Filling

### Special rules of classification

A document mentioning the storage of a gas using the physisorption or chemisorption properties of carbon nanotubes should be classified in the group concerned, for example a document addressing the storage of hydrogen should be classified in [C01B 3/00](#), and further classified in the sorbent field, e.g. in [B01J 20/00](#).

## C01B 32/18

### Nanoonions; Nanoscrolls; Nanohorns; Nanocones; Nanowalls

#### Definition statement

*This place covers:*

All nanosized carbon materials different from fullerenes and nanotubes, which are characterized by a specific structural aspect.

#### Glossary of terms

*In this place, the following terms or expressions are used with the meaning indicated:*

Nanoonion	Structure in which a plurality of graphene sheets are closed concentric spherical shell shape.
Nanoscroll	Similar to that of a multi-walled carbon nanotube, but with a spiral-like rolled-up geometry and open edges at the ends.
Nanohorn	Described as graphene sheets rolled up into the shape of a cylinder and its tip is closed.
Nanocone	Described as graphene sheets made into the shape of a conical structure.
Nanowall	Two-dimensional structure in which the graphene sheets are oriented perpendicular to the substrate.

## C01B 32/182

### Graphene

#### Definition statement

*This place covers:*

The production of graphene aerogel.

#### Special rules of classification

All documents in groups [C01B 32/182](#) - [C01B 32/196](#) are classified with symbols chosen from [C01B 2204/00](#) - [C01B 2204/32](#) to report structural aspects or properties of graphene.

#### Glossary of terms

*In this place, the following terms or expressions are used with the meaning indicated:*

Graphene	one-atom-thick planar sheet of sp <sup>2</sup> -bonded carbon atoms that are densely packed in a honeycomb crystal lattice or small stacks thereof
----------	--

## C01B 32/186

by chemical vapour deposition [CVD]

### References

#### Informative references

Attention is drawn to the following places, which may be of interest for search:

Coating by vacuum evaporation, by sputtering or by ion implantation of the coating material	<a href="#">C23C 14/00</a>
Chemical coating by decomposition of gaseous compounds, without leaving reaction products of surface material in the coating	<a href="#">C23C 16/00</a>

## C01B 32/194

After-treatment

### Definition statement

*This place covers:*

After-treatment of graphene, e.g. sorting, derivatising or dispersing of graphene.

## C01B 32/23

Oxidation

### Definition statement

*This place covers:*

Graphene oxide.

## C01B 32/25

Diamond

### References

#### Informative references

Attention is drawn to the following places, which may be of interest for search:

Formation of diamonds by using ultra-high pressure	<a href="#">B01J 3/06</a>
Single crystal or polycrystalline structure in which the grains are aligned in a preferential direction	<a href="#">C30B</a>

## C01B 32/30

Active carbon

### Definition statement

*This place covers:*

Carbon activated by heating to high temperature in the presence of an activating agent for producing an internal porous particle structure.

## Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Active carbon	Highly adsorptive carbon material with porous structure.
Gaseous activating agent	Gases, such as steam, for use to develop the pore structure of active carbon.
Non-gaseous activating agent	Chemicals, such as zinc chloride, for use to develop the pore structure of active carbon.

## Synonyms and Keywords

In patent documents, the following words/expressions are often used as synonyms:

- Activated carbon
- Active carbon
- Carbon molecular sieve

## C01B 32/306

with molecular sieve properties

### Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

CMS	Carbon molecular sieve
-----	------------------------

## C01B 32/336

characterised by gaseous activating agents

### Definition statement

This place covers:

Gaseous activation by means of combined-oxygen containing gases, such as steam and CO<sub>2</sub>.

## C01B 32/342

characterised by non-gaseous activating agents

### Definition statement

This place covers:

Activation in the presence of non-gaseous activating agents, e.g. ZnCl<sub>2</sub>, H<sub>3</sub>PO<sub>4</sub> or KOH.

## C01B 32/348

Metallic compounds

### Definition statement

This place covers:

Activation in the presence of a metallic compound, e.g. ZnCl<sub>2</sub>.

## C01B 32/384

### Granulation

#### References

##### *Informative references*

*Attention is drawn to the following places, which may be of interest for search:*

Granulation in general	<a href="#">B01J 2/00</a>
------------------------	---------------------------

#### Glossary of terms

*In this place, the following terms or expressions are used with the meaning indicated:*

The term granulation covers:	The methods of preparation of active carbon using carbonaceous precursors per se and binders, e.g. pitch, and producing the granules.
------------------------------	---

## C01B 32/40

### Carbon monoxide

#### References

##### *Informative references*

*Attention is drawn to the following places, which may be of interest for search:*

Metal carbonyls	<a href="#">C01G</a>
-----------------	----------------------

## C01B 32/60

**Preparation of carbonates or bicarbonates in general (of percarbonates [C01B 15/10](#); of specific carbonates or bicarbonates according to the cation [C01B-C01G](#))**

#### References

##### *Limiting references*

*This place does not cover:*

Particular individual carbonates, according to the cation	<a href="#">C01B - C01G</a>
Percarbonates	<a href="#">C01B 15/10</a>

**C01B 32/80****Phosgene****References****Informative references**

Attention is drawn to the following places, which may be of interest for search:

Carbonyl difluoride	<a href="#">C01B 32/00</a>
---------------------	----------------------------

**C01B 32/90****Carbides****References****Informative references**

Attention is drawn to the following places, which may be of interest for search:

Alloys	<a href="#">C22C</a>
--------	----------------------

**C01B 33/00**

**Silicon; Compounds thereof** ([C01B 6/00](#), [C01B 21/00](#), [C01B 23/00](#) take precedence; persilicates [C01B 15/14](#); carbides [C01B 32/956](#))

**References****Limiting references**

This place does not cover:

Persilicates	<a href="#">C01B 15/14</a>
Carbides	<a href="#">C01B 32/956</a>

**Informative references**

Attention is drawn to the following places, which may be of interest for search:

Apparatus for producing silicon or a compound thereof according to <a href="#">C01B 33/00</a> - <a href="#">C01B 33/46</a>	<a href="#">B01J 3/00</a> , <a href="#">B01J 4/00</a>
--	---

**Special rules of classification**

[C01B 6/00](#), [C01B 21/00](#) and [C01B 23/00](#) take precedence

**C01B 33/02**

**Silicon (forming single crystals or homogeneous polycrystalline material with defined structure [C30B](#))**

**References****Limiting references**

*This place does not cover:*

Single crystals or homogeneous polycrystalline material with a defined structure	<a href="#">C30B</a>
--	----------------------

**C01B 33/021**

**Preparation (chemical coating from the vapour phase [C23C 16/00](#))**

**Definition statement**

*This place covers:*

- Silicon nanotubes
- Silicon nanowires without any emphasis on the crystalline structure

**References****Limiting references**

*This place does not cover:*

Chemical coating by decomposition of gaseous precursor	<a href="#">C23C 16/00</a>
Silicon nanowires (often grown by the methods for the growth of single crystal whiskers) where there is emphasis on the crystalline nature	<a href="#">C30B</a>

**C01B 33/037**

**Purification (by zone-melting [C30B 13/00](#))**

**References****Limiting references**

*This place does not cover:*

Purification by zone melting	<a href="#">C30B 13/00</a>
------------------------------	----------------------------

**C01B 33/04**

**Hydrides of silicon**

**Definition statement**

*This place covers:*

Hydrides of silicon in the strict meaning of the term.

**C01B 33/06****Metal silicides (alloys [C22](#))****References****Limiting references***This place does not cover:*

Alloys	<a href="#">C22</a>
--------	---------------------

**C01B 33/113****Silicon oxides; Hydrates thereof {(preparing monoxide by reduction of siliceous material [C01B 33/182](#))}****References****Limiting references***This place does not cover:*

Preparation of silicon monoxide by reduction of siliceous material	<a href="#">C01B 33/182</a>
--	-----------------------------

**C01B 33/12****Silica; Hydrates thereof, e.g. lepidoid silicic acid****Glossary of terms***In this place, the following terms or expressions are used with the meaning indicated:*

Lepidoid acid	Acid which has a two-dimensional structure. The term "lepidoid" is a generic word for a compound wherein planar bonding predominates and two-dimensional network structures are formed. This lepidoid silicic acid is a special type of polymer silicic acid, wherein its crystalline structure is built up of siloxane bondings.
---------------	---

**C01B 33/146****After-treatment of sols {(preparation of hydrosols or aqueous dispersions from hydroorganosols, organosols or dispersions in an organic medium [C01B 33/141](#)}; preparation of hydroorganosols, organosols or dispersions in an organic medium from hydrosols {or aqueous dispersions} [C01B 33/145](#))}****References****Limiting references***This place does not cover:*

Preparation of hydrosols or aqueous dispersions from hydroorganosols, organosols or dispersions in an organic medium	<a href="#">C01B 33/141</a>
Preparation of hydroorganosols, organosols or dispersions in an organic medium from hydrosols or aqueous dispersions	<a href="#">C01B 33/145</a>

**C01B 33/148**

**Concentration; Drying; Dehydration; Stabilisation; Purification** {([C01B 33/1465](#) takes precedence)}

**Special rules of classification**

[C01B 33/1465](#) takes precedence.

**C01B 33/1585**

{Dehydration into aerogels}

**Glossary of terms**

*In this place, the following terms or expressions are used with the meaning indicated:*

Silica aerogel	What remains after the extraction of the liquid from the framework of the silica gel in a way that preserves the gel framework's original volume. This is most often achieved by supercritical extraction.
----------------	--

**C01B 33/16**

**Preparation of silica xerogels**

**Glossary of terms**

*In this place, the following terms or expressions are used with the meaning indicated:*

Xerogel	What remains when the liquid part of a wet gel is extracted by evaporation or similar methods. The shrinkage during extraction is often important.
---------	--

**C01B 33/18**

**Preparation of finely divided silica neither in sol nor in gel form; After-treatment thereof (preparation of aerogels by dehydrating gels [C01B 33/158](#); treatment to enhance the pigmenting or filling properties [C09C](#))**

**References****Limiting references**

*This place does not cover:*

Preparation of a silica aerogel by dehydrating a wet gel	<a href="#">C01B 33/158</a>
Treatments of finely divided silica to enhance the pigmenting or filling properties	<a href="#">C09C</a>

**C01B 33/20**

Silicates (persilicates [C01B 15/14](#) {; containing aluminium [C01B 33/26](#)})

**References****Limiting references**

*This place does not cover:*

Persilicates	<a href="#">C01B 15/14</a>
Silicates containing aluminium	<a href="#">C01B 33/26</a>

**C01B 33/28**

{Base exchange silicates, e.g. zeolites (regeneration [B01J 49/00](#))}

**Special rules of classification**

[C01B 33/28](#) - [C01B 33/2892](#): no longer to be used but cannot be deleted until splitting of groups to [C01B 39/00](#) is completed. Use [C01B 39/00](#) for classification

**C01B 33/32**

Alkali metal silicates ({[C01B 33/24](#)}, [C01B 33/26](#) take precedence)

**Special rules of classification**

[C01B 33/26](#) takes precedence.

**C01B 33/325**

{After-treatment, e.g. purification or stabilisation of solutions, granulation; Dissolution; Obtaining solid silicate, e.g. from a solution by spray-drying, flashing off water or adding a coagulant}

**References****Limiting references**

*This place does not cover:*

Obtaining a silicate, e.g. as a hydrate of a crystalline silicate from a solution or a hydrate melt by heating or cooling with or without seeding (not considered as an after-treatment)	<a href="#">C01B 33/32</a>
--	----------------------------

**C01B 33/36**

having base-exchange properties but not having molecular sieve properties (regeneration thereof [B01J 49/00](#))

**References****Limiting references**

*This place does not cover:*

Compounds having base-exchange properties and having molecular sieve properties	<a href="#">C01B 39/00</a>
---	----------------------------

**C01B 33/38**

Layered base-exchange silicates, e.g. clays, micas or alkali metal silicates of kenyaite or magadiite type {(activation of naturally occurring clays [B01J 20/12](#); pillared layered base-exchange silicates [B01J 29/049](#)}

**References****Limiting references**

*This place does not cover:*

Activation of naturally occurring clays	<a href="#">B01J 20/12</a>
Pillared layered base-exchange silicates	<a href="#">B01J 29/049</a>
Hydrotalcite (layered anion-exchange compound of formula $Mg_6Al_2(CO_3)(OH)_{16} \cdot 4(H_2O)$ )	<a href="#">C01F 7/785</a>

**C01B 33/40****Clays****Glossary of terms**

*In this place, the following terms or expressions are used with the meaning indicated:*

Clays	phyllosilicate minerals that contain large percentages of water trapped between their silica sheets
-------	---

**C01B 33/42**

Micas {; Interstratified clay-mica products (delaminated mica or vermiculite platelets obtained by a process involving cation-exchange [C04B 14/208](#))}

**References****Limiting references**

*This place does not cover:*

Delaminated mica or vermiculite platelets obtained by a process involving cation-exchange	<a href="#">C04B 14/208</a>
---	-----------------------------

## Special rules of classification

Also classified here are documents interstratified clay-mica products.

## Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Mica	phyllosilicate mineral having a layered or platy structure, composed of sheets of silicate tetrahedrons. two tetrahedral layers sandwich small metal ions such as aluminum in an octahedral layer
------	---

## C01B 33/46

**Amorphous silicates, e.g. so-called "amorphous zeolites" (crystalline zeolites [C01B 39/00](#))**

### Relationships with other classification places

Catalysts comprising molecular sieves are classified in the group [B01J 29/00](#). Catalyst carriers are covered by appropriate groups of [B01J 21/00](#) - [B01J 29/00](#).

Solid sorbent composition comprising synthetic zeolitic molecular sieves are classified in [B01J 20/00](#)

## References

### Limiting references

This place does not cover:

Crystalline silicates having molecular sieve properties	<a href="#">C01B 39/00</a>
---	----------------------------

## C01B 37/00

**Compounds having molecular sieve properties but not having base-exchange properties**

### Relationships with other classification places

Compounds classified in main group [C01B 37/00](#) are also classified in other groups of class [C01](#) according to their composition.

Metal organic framework materials (MOFs) is classified in [C01B 39/00](#) or [C01B 37/00](#) depending on their base-exchange properties

MOFs are also classified in [C07E](#).

## C01B 37/005

**{Silicates, i.e. so-called metallosilicalites or metallozeosilites}**

### Definition statement

This place covers:

Silicates, metallosilicalites, metallozeosilites

## Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

TS-1 or titanosilicalite-1	MFI-type compound in which some of the silicon atoms are substituted with titanium atoms
TS-2 or titanosilicalite-2	MEL-type compound in which some of the silicon atoms are substituted with titanium atoms

## C01B 37/02

**Crystalline silica-polymorphs, e.g. silicalites {dealuminated aluminosilicate zeolites}**

### References

#### Informative references

Attention is drawn to the following places, which may be of interest for search:

Dealuminated aluminosilicate	<a href="#">C01B 39/026</a>
------------------------------	-----------------------------

## Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Silicalite or silicalite-1	MFI-type polymorph of silica
Silicalite-2	MEL-type polymorph of silica

## C01B 37/06

**Aluminophosphates containing other elements, e.g. metals, boron**

### Definition statement

This place covers:

aluminophosphates including other elements incorporated into the framework

## C01B 39/00

Compounds having molecular sieve and base-exchange properties, e.g. crystalline zeolites; Their preparation; After-treatment, e.g. ion-exchange or dealumination (treatment to modify the sorption properties, e.g. shaping using a binder, [B01J 20/10](#); treatment to modify the catalytic properties, e.g. combination of treatments to make the zeolites appropriate to their use as a catalyst, [B01J 29/04](#); treatment to improve the ion-exchange properties [B01J 39/14](#))

### References

#### Limiting references

This place does not cover:

Treatment to modify the sorption properties, e.g. shaping using a binder	<a href="#">B01J 20/10</a>
--	----------------------------

Treatment to modify the catalytic properties, e.g. combination of treatments to make the zeolites appropriate to their use as a catalyst	<a href="#">B01J 29/04</a>
Treatment to improve the ion-exchange properties	<a href="#">B01J 39/14</a>

### Informative references

Attention is drawn to the following places, which may be of interest for search:

Regeneration or reactivation of ion-exchange properties	<a href="#">B01J 49/00</a>
Preparation of stabilised suspensions used in detergents	<a href="#">C11D 3/12</a>

### Special rules of classification

Compounds classified in main group [C01B 39/00](#) are also classified in other groups of class [C01](#) according to their composition.

Metal organic framework materials (MOFs) are classified in [C01B 39/00](#) or [C01B 37/00](#) depending on their base-exchange properties.

MOFs are also classified in [C07E](#).

### Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Zeolites	(i) Crystalline aluminosilicates with base-exchange properties, having three-dimensional porous lattice framework of tetrahedral oxide units (ii) Compounds isomorphous to those of the former category, wherein the aluminum or silicon atoms in the framework are partly or wholly replaced by atoms of other elements, e.g. Ga, Ge, P or B.
----------	--

## C01B 39/02

**Crystalline aluminosilicate zeolites; Isomorphous compounds thereof; Direct preparation thereof; Preparation thereof starting from a reaction mixture containing a crystalline zeolite of another type, or from preformed reactants; After-treatment thereof**

### Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Organic additive, organic template directing agent, templating agent, template, structure directing agent (SDA), structuring agent	Any component present in the reaction mixture, which directs the formation of the framework about it.
--	---

## C01B 39/026

{After-treatment}

### Definition statement

*This place covers:*

Dealumination of an aluminosilicate zeolite and ion-exchange. Also classified there are documents in which there is a particular emphasis on a process for removing an organic structure directing agent occluded within the as-synthesized zeolite framework. If the removing of the organic structure directing agent is not the invention, only mentioned in the document, it's not classified.

The normal steps of zeolite preparation like synthesis mixture, washing, calcination are not considered as post treatment.

### References

#### Limiting references

*This place does not cover:*

Treatment to modify the sorption properties, e.g. shaping using a binder	<a href="#">B01J 20/10</a>
Treatment to modify the catalytic properties, e.g. combination of treatments to make the zeolites appropriate to their use as a catalyst	<a href="#">B01J 29/04</a>
Treatment to improve the ion-exchange properties	<a href="#">B01J 39/14</a>
Regeneration or reactivation of ion-exchange properties	<a href="#">B01J 49/00</a>
Preparation of stabilised suspensions used in detergents	<a href="#">C11D 3/12</a>

## C01B 39/06

**Preparation of isomorphous zeolites characterised by measures to replace the aluminium or silicon atoms in the lattice framework by atoms of other elements {, i.e. by direct or secondary synthesis}**

### Definition statement

*This place covers:*

Preparation isomorphous zeolites (i.e. wherein the aluminium or silicon atoms in the framework are partly or wholly replaced by atoms of other elements, e.g. Ga, Ge, P or B) obtained by direct or secondary synthesis.

## C01B 39/14

**Type A**

### Definition statement

*This place covers:*

Zeolite of LTA structure

## References

### Limiting references

*This place does not cover:*

Preparation using at least one organic template	<a href="#">C01B 39/145</a>
---	-----------------------------

## Special rules of classification

Groups [C01B 39/023](#), [C01B 39/026](#) and **C01B36/06** take precedence

## Glossary of terms

*In this place, the following terms or expressions are used with the meaning indicated:*

Framework topology code LTA	type A, Linde A or Linde type A as exemplified in patent document US2882243
-----------------------------	---

## C01B 39/16

from aqueous solutions of an alkali metal aluminate and an alkali metal silicate excluding any other source of alumina or silica but seeds {([C01B 39/145](#) takes precedence)}

## Special rules of classification

[C01B 39/145](#) takes precedence

## C01B 39/18

from a reaction mixture containing at least one aluminium silicate or aluminosilicate of a clay type, e.g. kaolin or metakaolin or its exotherm modification or allophane {([C01B 39/145](#) takes precedence)}

## Special rules of classification

[C01B 39/145](#) takes precedence

## C01B 39/20

Faujasite type, e.g. type X or Y

---	-----------------------------

**Special rules of classification**

Groups [C01B 39/023](#), [C01B 39/026](#) and **C01B36/06** take precedence

**Glossary of terms**

*In this place, the following terms or expressions are used with the meaning indicated:*

Zeolite T (Framework topology code: ERI/OFF)	or Linde T exemplified by patent document US2950952
Framework topology code ERI	Erionite
Framework topology code OFF	Offretite

## C01B 39/32

### Type L

#### Special rules of classification

Groups [C01B 39/023](#), [C01B 39/026](#) and **C01B36/06** take precedence

#### Glossary of terms

*In this place, the following terms or expressions are used with the meaning indicated:*

Type L (Framework topology code LTL)	Linde L or Linde type L exemplified in patent document US3216789
--------------------------------------	--

## C01B 39/34

### Type ZSM-4

#### Definition statement

*This place covers:*

Zeolites with framework topology code MAZ.

#### Special rules of classification

Groups [C01B 39/023](#), [C01B 39/026](#) and **C01B36/06** take precedence

#### Glossary of terms

*In this place, the following terms or expressions are used with the meaning indicated:*

ZSM4 (Framework topology code MAZ)	exemplified by patent document GB1117568
Omega (Framework topology code MAZ)	exemplified by patent document GB1178186
Framework topology MAZ	Mazzite

## C01B 39/36

### Pentasil type, e.g. types ZSM-5, ZSM-8 or ZSM-11

#### Special rules of classification

Groups [C01B 39/023](#), [C01B 39/026](#) and **C01B36/06** take precedence.

## C01B 39/365

### {Type ZSM-8; Type ZSM-11; ZSM 5/11 intermediate}

#### Definition statement

*This place covers:*

only the identified type ZSM-8, ZSM-11, ZSM5/11 intermediate

The mixture of MFI and MEL frameworks, any intergrowth of MFI and MEL frameworks are classified in [C01B 39/36](#)

**Glossary of terms**

*In this place, the following terms or expressions are used with the meaning indicated:*

ZSM-8 (framework topology code MFI/MEL)	exemplified by patent document US3702886; thought to be an intergrowth of ZSM-5 with ZSM-11
ZSM-11 (framework topology code MEL)	exemplified by patent document US3709979
ZSM-5/11 (framework topology code MFI/MEL)	intergrowth product of the ZSM-5 and ZSM-11; exemplified by patent document US4289607
Framework topology code MFI	ZSM-5
Framework topology code MEL	ZSM-11

**C01B 39/38****Type ZSM-5****References****Limiting references**

*This place does not cover:*

Preparation using at least one organic template	<a href="#">C01B 39/40</a>
---	----------------------------

**Glossary of terms**

*In this place, the following terms or expressions are used with the meaning indicated:*

ZSM-5 (Framework topology code MFI)	exemplified by patent document US3702886
-------------------------------------	--

**C01B 39/42****Type ZSM-12****Special rules of classification**

Groups [C01B 39/023](#), [C01B 39/026](#) and **C01B36/06** take precedence

**Glossary of terms**

*In this place, the following terms or expressions are used with the meaning indicated:*

Framework topology code MTW	ZSM-12 exemplified by patent document US3832449
-----------------------------	---

## C01B 39/44

Ferrierite type, e.g. types ZSM-21, ZSM-35 or ZSM-38

### References

#### Limiting references

*This place does not cover:*

Preparation using at least one organic template	<a href="#">C01B 39/445</a>
---	-----------------------------

### Special rules of classification

Groups [C01B 39/023](#), [C01B 39/026](#) and **C01B36/06** take precedence

### Glossary of terms

*In this place, the following terms or expressions are used with the meaning indicated:*

Framework topology code FER	Ferrierite
ZSM-21 (Framework topology code FER)	exemplified by patent document US4046859
ZSM-35 (Framework topology code: FER)	exemplified by patent document US4046859
ZSM-38 (Ferrierite-type)	exemplified by patent document US4016245

## C01B 39/46

Other types characterised by their X-ray diffraction pattern and their defined composition {([C01B 39/023](#), [C01B 39/026](#), [C01B 39/06](#) take precedence)}

### Definition statement

*This place covers:*

zeolites with specific X-ray diffraction pattern and defined composition not classifiable in the subgroups [C01B 39/14](#) - [C01B 39/445](#)

### References

#### Limiting references

*This place does not cover:*

Preparation using at least one organic template	<a href="#">C01B 39/48</a>
---	----------------------------

### Special rules of classification

Groups [C01B 39/023](#), [C01B 39/026](#) and **C01B36/06** take precedence

## C01B 39/50

Zeolites wherein inorganic bases or salts occlude channels in the lattice framework, e.g. sodalite, cancrinite, nosean, hauynite {(ultramarine [C09C 1/32](#))}

### References

#### Limiting references

*This place does not cover:*

Ultramarine ( $\text{Na}_8[(\text{AlO}_2)_6(\text{SiO}_2)_6]\text{S}_2$ )	<a href="#">C09C 1/32</a>
---	---------------------------

## C01B 39/52

### Sodalites

### Glossary of terms

*In this place, the following terms or expressions are used with the meaning indicated:*

Sodalite	idea unit cell content: $\text{Na}_8[(\text{AlO}_2)_6(\text{SiO}_2)_6]\text{Cl}_2$
----------	--

## C01B 39/54

### Phosphates, e.g. APO or SAPO compounds

### Relationships with other classification places

Catalysts compositions are classified in the groups [B01J 21/00](#) - [B01J 29/00](#). Catalyst carriers are covered by appropriate groups of [B01J 21/00](#) - [B01J 29/00](#).
