

C08H

DERIVATIVES OF NATURAL MACROMOLECULAR COMPOUNDS

(polysaccharides [C08B](#); natural rubber [C08C](#); natural resins or their derivatives [C09F](#); bituminous materials [C10](#))

Definition statement

This place covers:

Macromolecular products derived from proteins, e.g. protein-aldehyde or casein-aldehyde condensates, products derived from horn, hoofs, hair, skin or leather.

Vulcanised oils, e.g. factice.

Other macromolecular compounds falling within the subclass title, e.g. derived from lignin or lignocellulosic materials.

Processes for preparing the above macromolecular materials.

Relationships with other classification places

Multiple classification

Biocidal, pest-repellant, pest-attractant or plant growth regulatory activity of compounds or preparations is further classified in subclass [A01P](#).

Processes using enzymes or microorganisms in order to

- liberate, separate or purify a pre-existing compound or composition, or to
- treat textiles or clean solid surfaces of materials, are further classified in subclass [C12S](#).

Therapeutic activity of chemical compounds or medicinal preparations is further classified in subclass [A61P](#) (as secondary classification).

The use of cosmetics or other toilet preparations is further classified in [A61Q](#).

References

Limiting references

This place does not cover:

Polysaccharides	C08B
Natural rubber	C08C
Graft polymers obtained by polymerizing monomers on to polysaccharides, natural rubbers or derivatives thereof	C08F 251/00 , C08F 253/00
Compositions of bituminous materials, e.g. asphalt, tar or pitch	C08L 95/00
Natural resins or their derivatives	C09F
Glue, gelatine	C09H
Working up pitch, asphalt or bitumen	C10C 3/00

Application-oriented references

Examples of places where the subject matter of this place is covered when specially adapted, used for a particular purpose, or incorporated in a larger system:

Food proteins	A23J
---------------	----------------------

Special rules of classification

As the class [C08](#) covers only macromolecular compounds, the derivatives referred to in this subclass are restricted to the macromolecular ones (e.g. no soap nor glycerine).

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Factice	Vulcanized oil, used as a substitute for rubber
Natural	Available in nature

C08H 1/00

Macromolecular products derived from proteins (food proteins [A23](#); glue, gelatine [C09H](#))

Definition statement

This place covers:

Extraction, preparation, derivatisation or degradation of proteins.

Relationships with other classification places

Composition of proteins	C08L 89/00
Compositions of proteins or protein derivatives in minority	C08L 89/00 - C08L 89/06
Coating composition comprising proteins or protein derivatives	C09D 189/00 - C09D 189/06
Adhesive composition comprising proteins or protein derivatives	C09J 189/00 - C09J 189/06
Obtaining protein compositions for foodstuffs from hair, feathers, horn, skins, leather or bones	A23J 1/10
Foods or foodstuffs	A23L 5/00
Material for prosthesis	A61L 27/24
Fermentation or enzyme-using processes for the preparation of peptides or proteins	C12P 21/00
Galenical forms, e.g. capsules, pills or dragees	A61K 9/00
Medicinal preparations containing peptides	A61K 38/00
Medicinal preparations containing antigens or antibodies, e.g. vaccines	A61K 39/00
Medicinal preparations characterised by the non-active ingredient being a protein	A61K 47/42
Drug conjugate with proteins	A61K 47/62

Proteins or derivatives thereof in solution, or together with other macromolecular compounds, or together with an inorganic or non-macromolecular organic additive are considered as a composition and are thus classified according to the rules of [C08L](#). They are classified according to the mutual proportions by weight of only the macromolecular constituents, in particular according to the macromolecular constituent present in the highest proportion. If all the constituents are present in equal proportions, the composition is classified according to each of these constituents.

Compositions containing a proteins or derivatives thereof and an inorganic or non-macromolecular organic additive as compounding agent are not classified in [C08K](#) as indicated in the rules for [C08L](#), but in the corresponding [C08L](#) subclass together with the corresponding Indexing Code(s) in [C08K](#).

Ex.: Composition consisting of gelatine and glass fibres (filler) is classified in [C08L 89/06](#) and [C08K 7/14](#)

The same rules apply to [C09D](#) and [C09J](#).

Covalently or ionically crosslinked gels are classified in [C08H](#) as they are considered as protein derivatives per se.

- If they are not crosslinked, then these gels are classified in the corresponding [C08L](#) group together with [C08J 3/075](#) and an Indexing Code of the group [C08J 2300/00-C08J 2399/00](#) (Please see the Rules of classification for subclass [C08J](#)).

Ex.: Hydrogel of collagen is classified in [C08L 89/06](#), [C08J 3/075](#) and [C08J 2389/06](#).

Multiple classification

Please refer to the corresponding part in [C08H](#).

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Factice	vulcanised oil used as a substitute for rubber
---------	--

C08H 6/00

{Macromolecular compounds derived from lignin, e.g. tannins, humic acids}

Definition statement

This place covers:

- Lignin or derivatives thereof
- Process for their extraction, preparation, derivatisation or degradation.

Relationships with other classification places

Composition of compounds derived from lignin	C08L 97/005
Coating composition comprising lignin-containing materials	C09D 197/005
Adhesive based on lignin-containing materials	C09J 197/005
Compositions of lignin-containing materials in minority	C08L 97/005

Lignin-containing materials in solution, or together with other macromolecular compounds, or together with an inorganic or non-macromolecular organic additive are considered as a composition and are thus classified according to the rules of [C08L](#). They are classified according to the mutual proportions by weight of only the macromolecular constituents, in particular according to the macromolecular constituent present in the highest proportion. If all the constituents are present in equal proportions, the composition is classified according to each of these constituents.

Compositions containing a lignin-containing material and an inorganic or non-macromolecular organic additive as compounding agent are not classified in [C08K](#) as indicated in the rules for [C08L](#), but in the corresponding [C08L](#) subclass together with the corresponding Indexing Code(s) in [C08K](#).

Ex.: A composition consisting of lignin and glass fibres (filler) is classified in [C08L 97/005](#) and [C08K 7/14](#).

The same rules apply to [C09D](#) and [C09J](#).

Covalently or ionically crosslinked gels are classified in [C08H](#) as they are considered as lignin derivatives per se.

- If they are not crosslinked, then these gels are classified in the corresponding [C08L](#) groups together with [C08J 3/075](#) and an Indexing Code of the group [C08J 2300/00-C08J 2399/00](#) (Please see the Rules of classification for subclass [C08J](#)).

Ex.: Hydrogel of lignin is classified in [C08L 97/005](#), [C08J 3/075](#) and [C08J 2397/00](#).

Multiple classification

Please refer to the corresponding part in [C08H](#).

References

Limiting references

This place does not cover:

Low-molecular weight derivatives of lignin, e.g. tannins or humic acids	C07G 1/00
---	---------------------------

C08H 8/00

Macromolecular compounds derived from lignocellulosic materials {(pretreatment thereof [B27N](#))}

Definition statement

This place covers:

- Lignocellulosic materials, woods chips, sawdust or biomass and the like
- Process for their extraction, preparation, derivatisation and degradation.

Relationships with other classification places

Composition comprising lignocellulosic materials	C08L 97/02
Coating composition comprising lignocellulosic materials	C09D 197/02
Adhesive composition comprising lignocellulosic materials	C09J 197/02
Compositions of lignocellulosic materials in minority	C08L 97/02

Lignocellulosic materials in solution, or together with other macromolecular compounds, or together with an inorganic or non-macromolecular organic additive are considered as a composition and are thus classified according to the rules of [C08L](#). They are classified according to the mutual proportions by weight of only the macromolecular constituents, in particular according to the macromolecular constituent present in the highest proportion. If all the constituents are present in equal proportions, the composition is classified according to each of these constituents.

Compositions containing a lignocellulosic material and an inorganic or non-macromolecular organic additive as compounding agent are not classified in [C08K](#) as indicated in the rules for [C08L](#), but in the corresponding [C08L](#) subclass together with the corresponding Indexing Code(s) in [C08K](#).

Ex.: Composition consisting of lignocellulose and glass fibres (filler) is classified in [C08L 97/02](#) and [C08K 7/14](#)

The same rules apply to [C09D](#) and [C09J](#).

Covalently or ionically crosslinked gels are classified in [C08H](#) as they are considered as lignocellulose derivatives per se.

- If they are not crosslinked, then these gels are classified in the corresponding [C08L](#) groups together with [C08J 3/075](#) and an Indexing Code of the group [C08J 2300/00-C08J 2399/00](#) (Please see the Rules of classification for subclass [C08J](#)).

Ex.: Hydrogel of lignocellulose is classified in [C08L 97/02](#), [C08J 3/075](#) and [C08J 2397/02](#).

Multiple classification

Layered products comprising essentially wood	B32B 21/00
Bio-fuels	C10L
Enzymatic treatment	C12P
Post-treatment of wood	B27K or B27N

Please refer also to the corresponding part in [C08H](#).

C08H 99/00

Subject matter not provided for in other groups of this subclass {, e.g. flours, kernels}

Definition statement

This place covers:

- Natural macromolecular compounds or derivatives thereof not provided for elsewhere, e.g. flours, kernels, olive or cherry pits.
- Process for their obtention or processing.

Relationships with other classification places

Composition of natural macromolecular compounds or derivatives thereof	C08L 99/00
Coating composition comprising natural macromolecular compounds or derivatives thereof	C09D 199/00
Adhesive composition comprising natural macromolecular compounds or derivatives thereof	C09J 199/00
Compositions of natural macromolecular compounds or derivatives thereof in minority	C08L 99/00
Flour or dough treatment; baking	A21D

Natural macromolecular compounds or derivatives thereof in solution, or together with other macromolecular compounds, or together with an inorganic or non-macromolecular organic additive are considered as a composition and are thus classified according to the rules of [C08L](#). They are classified according to the mutual proportions by weight of only the macromolecular constituents, in particular according to the macromolecular constituent present in the highest proportion. If all the constituents are present in equal proportions, the composition is classified according to each of these constituents.

Compositions containing a natural macromolecular material and an inorganic or non-macromolecular organic additive as compounding agent are not classified in [C08K](#) as indicated in the rules for [C08L](#), but in the corresponding [C08L](#) subclass together with the corresponding Indexing Code(s) in [C08K](#).

Ex.: A composition consisting of flour and glass fibres (filler) is classified in [C08L 99/00](#) and [C08K 7/14](#)

The same rules apply to [C09D](#) and [C09J](#).

Covalently or ionically crosslinked gels are classified in [C08H](#) as they are considered as natural macromolecular materials per se.

- If they are not crosslinked, then these gels are classified in the corresponding [C08L](#) groups together with [C08J 3/075](#) and an Indexing Code of the group [C08J 2300/00-C08J 2399/00](#) (Please see the Rules of classification for subclass [C08J](#)).

Ex.: Hydrogel of flour is classified in [C08L 99/00](#), [C08J 3/075](#) and [C08J 2399/00](#).

Multiple classification

Please refer to the corresponding part in [C08H](#).
