C10L

FUELS NOT OTHERWISE PROVIDED FOR; NATURAL GAS; SYNTHETIC NATURAL GAS OBTAINED BY PROCESSES NOT COVERED BY SUBCLASSES C10G OR C10K; LIQUIFIED PETROLEUM GAS; USE OF ADDITIVES TO FUELS OR FIRES; FIRE-LIGHTERS

Definition statement

This place covers:

- Compositions which react chemically, usually with oxygen in air, to produce heat in controllable amounts or which are dispersed in air for explosive combustion in an engine or which produce light along with heat upon combustion, i.e. liquid carbonaceous fuels, gaseous fuels, natural gas, synthetic natural gas, liquefied petroleum gas, solid fuels and fuels produced by solidifying fuels.
- Treatment of fuels to improve their combustion.
- Use of additives to fuels or fires for particular purposes, e.g. for reducing smoke development, for minimising corrosion or incrustation, for facilitating soot removal or for improving the octane number or the low temperature properties of the fuel.
- Fire-lighters, i.e. easily-combustible compositions or shaped products which are designed to initiate the combustion of a larger body of fuel and methods or apparatus for their manufacture.

Liquid carbonaceous fuels

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Preparation of liquid fuel to be fed to combustion apparatus	F23K 5/08

C10L 1/10

containing additives

Definition statement

This place covers:

- Liquid carbonaceous fuels containing additives, at least one additive being an inorganic compound and at least one additive being an organic non-macromolecular or macromlecular compound.
- Use of at least one inorganic compound and at least one organic non-macromolecular or macromolecular compound as additives in a liquid carbonaceous fuel

Most of the liquid carbonaceous fuels comprising an inorganic additive and an organic additive have been classified in C10L 1/10, the organic additive being macromolecular or not.

Relationships with other classification places

The additive composition per se comprising the compound(s) can be classified in other subclasses, especially if the preparation, the chemical composition, the property, the function or the physical state of the additive composition are important per se independently of the use of the composition as additive in a liquid carbonaceous fuel.

The particular purpose(s) for which the additive is used in the fuel is classified in C10L 10/00.

Lubricating compositions; use of chemical substances either alone or as lubricating ingredients in a lubricating composition	C10M
Producing, refining, or preserving fats, fatty substances, fatty oils or waxes	C11B

Fatty acids from fats, oils or waxes; fats, oils or fatty acids by chemical modification of fats, oils, or fatty acids obtained there from	C11C

Special rules of classification

1. In groups C10L 1/12 - C10L 1/1291 and C10L 1/16 - C10L 1/308, in the absence of an indication to the contrary, a compound is always classified in the last appropriate place.

2. A metal salt or an ammonium salt of a compound is classified as that compound, e.g. a chromium sulfonate is classified as a sulfonate in group C10L 1/24 and not in group C10L 1/30. But a salt of a quaternary ammonium compound is classified in C10L 1/2222 .

3. In this group it is mandatory to add the Indexing Codes relating to individual additional components. The Indexing Codes are chosen from groups C10L 1/12 - C10L 1/308.

4. Mixtures of additives are classified in the corresponding main group, individual additives being indexed using the Indexing Code according to point 3.

C-Sets of Indexing Codes may be used:

4.a. For a well-defined polymer: A polymer of ethylene and alkylacrylate is classified in (C10L 1/1963 , C10L 1/1641), starting with the Indexing Code corresponding to the polymer last in the classification scheme.

4.b. For a well-defined composition: A composition comprising a polyethylene and a polyalkylacylate is classified in (C10L 1/1641, C10L 1/1963); the Indexing Codes are in the same order as in the classification scheme.

4.c. A composition comprising a polyethylene and a polypropylene is classified in (C10L 1/1641, C10L 2300/20).

5. When several alternatives for the same individual additive are mentioned, e.g. as a Markush-formula, classification may be done in the corresponding main group only, the alternatives being indexed using codes mentioned in point 3; the very relevant main alternatives may be separately classified in the corresponding groups.

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Polyether polymer	Macromolecular compounds obtained by reactions forming an ether link in themain chain of the macromolecule and comprising 4 or more monomers.
Hydrocarbon polymer or macromolecular compound	Hydrocarbyl group containing 30 or more carbon atoms
Additive	Any compound in the composition with a concentration of at most 2%, in volume or weight

C10L 1/103

{stabilisation of anti-knock agents}

Definition statement

This place covers:

Liquid carbonaceous fuels comprising an anti-knock additive stabilised by an other additive or compound; the deterioration with time of the anti-knock agent is prevented; the anti-knock agent may be maintained uniformly dispersed in the fuel.

The anti-knock additive and the other additive or compound can be both organic compounds. The fuel may contain no inorganic additive.

Use of a stabilised anti-knock agent as additive in a liquid carbonaceous fuel.

References

Limiting references

This place does not cover:

Liquid carbo naceous fuels containing additives, at least one being inorganic	C10L 1/10, C10L 1/106
Liquid carbonaceous fuels containing only organic compounds as additives	C10L 1/14, C10L 1/143

C10L 1/30

compounds not mentioned before (complexes)

Definition statement

This place covers:

- Liquid carbonaceous fuels characterised by comprising an additive being an organic compound not mentioned before.
- Use of an organic compound not mentioned before as additive in a liquid carbonaceous fuel.

The additive is an organic compound which contains at least one element different from carbon, hydrogen, oxygen, halogens, nitrogen, sulphur, selenium, tellurium, phosphorus or silicon; the additive is for example an organic metal complex.

{Coal-oil suspensions}

Definition statement

This place covers:

Solid coal particles in an oil phase to form an oily slurry.

C10L 1/324

{Dispersions containing coal, oil and water}

Definition statement

This place covers:

Slurries comprising solid coal and water (or another hydrophilic phase) and oil.

C10L 1/326

{Coal-water suspensions}

Definition statement

This place covers:

Solid coal particles in a water phase to form a slurry.

C10L 1/328

{Oil emulsions containing water or any other hydrophilic phase}

Definition statement

This place covers:

Fuel emulsion compositions and/or preparations therefore (clearly indicating fuel composition though) comprising a hydrophobic phase and a hydrophilic phase, usually comprising water but also including and/or a (short-chained) alcohol.

References

Limiting references

This place does not cover:

Emulsifying process in general	B01F 23/00
Emulsifying agents	C09K 23/00

Special rules of classification

The type of emulsion, if indicated, should be classified (w/o or o/w or w/o/w or bicontinuous) using the Indexing Code: C10L 2250/08 or subgroups.

C10L 3/00

Gaseous fuels; Natural gas; Synthetic natural gas obtained by processes not covered by subclass C10G, C10K; Liquefied petroleum gas

Definition statement

This place covers:

Any gaseous hydrocarbonaceous fuel, which is not covered by a subgroup or has too little detail or too much of a deviating detail from the titles of subgroups to be included therein.

C10L 3/101

{Removal of contaminants}

Definition statement

This place covers:

removal of contaminants, e.g. unwanted heavy hydrocarbons.

C10L 3/102

{of acid contaminants}

Definition statement

This place covers:

Removal of acid compounds in general, other than S or CO_2 or when no detail is given at all.

C10L 3/103

{Sulfur containing contaminants}

Definition statement

This place covers:

Removal of S-containing compounds in particular.

Special rules of classification

When both S compounds and CO_2 are removed from the gas stream, both symbols C10L 3/103 and C10L 3/104 should be given.

C10L 3/104

{Carbon dioxide}

Definition statement

This place covers:

Removal of CO_2-containing compounds in particular.

Special rules of classification

When both S compounds and CO_2 are removed from the gas stream, both symbols C10L 3/103 and C10L 3/104 should be given.

C10L 3/105

{of nitrogen}

Definition statement

This place covers:

Denitrification of natural gas.

C10L 3/106

{of water}

Definition statement

This place covers:

Dehydration of natural gas.

Synonyms and Keywords

In patent documents, the following words/expressions are often used as synonyms:

- "desiccation " and "dewatering"

C10L 3/107

{Limiting or prohibiting hydrate formation}

Definition statement

This place covers:

Methods for removal or inhibition of gas hydrate formation.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Well drilling compositions	C09K 8/00

C10L 3/108

{Production of gas hydrates}

Definition statement

This place covers:

Methods to produce gas hydrates, e.g. for transport.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Well drilling compositions	C09K 8/00

C10L 3/12

Liquefied petroleum gas {(liquefying by pressure and cold treatment F25J)}

Definition statement

This place covers:

LPG compositions (mainly a composition comprising propane and butane), characteristics, production and/or upgrading.

References

Limiting references

This place does not cover:

Cryogenic processes to separate or otherwise treat a gas, i.e. the gas to be treated is in (cold) liquid state	F25J

C10L 5/00

Solid fuels (produced by solidifying fluid fuels C10L 7/00; peat briquettes C10F 7/06)

Definition statement

This place covers:

A solid matter which is of mineral origin, e.g. coal or non-mineral origin, e.g. wood and which is clearly usable as a fuel.

References

Limiting references

This place does not cover:

Solid fuels produced by solidifying fluid fuels	C10L 7/00
Peat briquettes	C10F 7/06

Informative references

Attention is drawn to the following places, which may be of interest for search:

Mixing solids	B29B
Briquetting presses	B30B 11/00
Candles	C11C 5/00
Fuel delivery or fuel directly delivered to combustion apparatus	F02M 21/00
Preparation of lump or pulverulent fuel for delivering to combustion apparatus	F23K 1/00

Special rules of classification

In this group, in the absence of an indication to the contrary, a compound is classified in the last appropriate place.

C10L 5/02

{Solid fuels such as} briquettes consisting mainly of carbonaceous materials of mineral {or non-mineral} origin (peat briquettes C10F)

Definition statement

This place covers:

Briquettes or other solid shapes of carbonaceous material.

References

Limiting references

This place does not cover:

Peat briquettes	C10F

C10L 5/04

Raw material {of mineral origin} to be used; Pretreatment thereof {(pretreatment of fuels of non-mineral origin C10L 5/40)}

Definition statement

This place covers:

The type of mineral feed material is an object of the invention.

References

Limiting references

This place does not cover:

Pretreatment of raw materials of non-mineral origin	C10L 5/40

Special rules of classification

When a briquette comprises both mineral and non-mineral origin matter, it should be classified in both subgroups of mineral and non-mineral origin, i.e. C10L 5/04 and C10L 5/40 or lower, depending on the origin.

C10L 5/06

Methods of {shaping, e.g. pelletizing or} briquetting (mechanical part of pressing briquettes B30B 11/00)

Definition statement

This place covers:

The method of forming the solid fuel, e.g. briquettes, pellets or logs, independently of the origin of the fuel.

References

Limiting references

This place does not cover:

Moulding of materials in general, not for use as fuel	B27N
Mechanical part of pressing briquettes per se	B30B 11/00

Special rules of classification

This group should be allocated in addition to the origin of the fuel, i.e. the material used, which has to be classified separately in C10L 5/02 or C10L 5/40 or subgroups.

C10L 5/08

without the aid of extraneous binders

Definition statement

This place covers:

Briquettes are formed and bound e.g. by the action of pressing itself or heat, but without addition of a binding agent.

C10L 5/10

with the aid of binders, e.g. pretreated binders

Definition statement

This place covers:

Methods where the solid fuel composition includes a composition which functions to keep the briquette in shape. This is valid for compositions both of mineral origin or non-mineral origin, which feature is to be classified separately in C10L 5/02 or C10L 5/40, or subgroups.

C10L 5/105

{with a mixture of organic and inorganic binders}

Definition statement

This place covers:

Organic binders. mixed with inorganic binders

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Organic binders	(Hydro)carbonaceous binders, i.e. comprising a hydrocarbon chain

C10L 5/12

with inorganic binders

Definition statement

This place covers:

An inorganic compound usually being an ionic compound added to the solid fuel to serve as a binder.

C10L 5/14

with organic binders

Definition statement

This place covers:

An organic compound could be any compound comprising at least partly a hydrocarbon structure, which is added to the solid fuel to serve as a binder. Either naturally occurring or a (side) product.

C10L 5/143

{with lignin-containing products}

Definition statement

This place covers:

Lignin binders mainly used in biomass fuels as it is itself derived from biomass (mainly wood).

C10L 5/146

{with wax, e.g. paraffin wax}

Definition statement

This place covers:

Binders comprising longer chain alkanes (paraffins) which are solid at room temperature, e.g. waxes.

C10L 5/16

with bituminous binders, e.g. tar, pitch

Definition statement

This place covers:

Binders with bituminous binders, e.g. tar, pitch or other heavy hydrocarbonaceous fractions used to bind the briquettes.

C10L 5/18

with naphthalene

Definition statement

This place covers:

binders comprising naphthalene, (molecular formula $C_{10}H_8$).

Synonyms and Keywords

In patent documents, the following words/expressions are often used as synonyms:

- Tar Camphor, White Tar, Moth Flakes, albocarbon, naphthaline, naphthalin or anti-moth

C10L 5/20

with sulfite lye

Definition statement

This place covers:

Organic binders comprising hydrogen sulfite.

C10L 5/22

Methods of applying the binder to the other compounding ingredients; Apparatus therefor

Definition statement

This place covers:

Details of the specific application of the binder to the fuel, either method or apparatus

C10L 5/24

Combating dust during {shaping or} briquetting; Safety devices against explosion

Definition statement

This place covers:

Dust combating either by a process step or alteration of briquetting process or by addition of a compound which reduces dust formation

C10L 5/26

After-treatment of the {shaped fuels, e.g.} briquettes

Definition statement

This place covers:

Any process steps applied after the briquetting to serve a particular purpose such as improving storage or transport stability.

C10L 5/28

Heating the {shaped fuels, e.g.} briquettes; Coking the binders

Definition statement

This place covers:

When heating is done after briquettes are formed in order to coke them and stabilize their structure.

C10L 5/30

Cooling the {shaped fuels, e.g.} briquettes

Definition statement

This place covers:

When cooling is done in a particular way which is an object of the invention, e.g. after a briquetting process from which the briquettes emerge at too high a temperature.

C10L 5/32

Coating

Definition statement

This place covers:

Cating of briquettes either superficially or including also impregnation with a certain compound.

C10L 5/34

Other details of the {shaped fuels, e.g.} briquettes

Definition statement

This place covers:

Any detail other than the shape or size of the briquette.

C10L 5/36

Shape

Definition statement

This place covers:

Shape or also including specific dimensions being part of the object of the invention.

Special rules of classification

When size is merely mentioned as additional information in the application, Indexing Code should be assigned for size: C10L 2250/06.

C10L 5/361

{Briquettes}

Definition statement

This place covers:

Briquettes, e.g. such as used for barbecues.

C10L 5/363

{Pellets or granulates}

Definition statement

This place covers:

Pellets as produced by pelletizer.

C10L 5/365

{Logs}

Definition statement

This place covers:

Log-shaped fuel, e.g. to imitate actual wood logs.

C10L 5/366

{Powders}

Definition statement

This place covers:

Powdered fuel as the end product, which could be pulverised pellets or briquettes, to be used e.g. in powdered coal fuelled combustor.

C10L 5/368

{Shaped fuels bundled or contained in a bag or other container}

Definition statement

This place covers:

The bundling or collecting of individual pieces of fuel, e.g. logs or briquettes, by e.g. a rope around them or putting them in bags or any other type of container.

C10L 5/38

Briquettes consisting of different layers

Definition statement

This place covers:

The composition of the briquettes comprises several components and each of them is applied in a separate layer, e.g.details on layer thickness.

C10L 5/40

essentially based on materials of non-mineral origin

Definition statement

This place covers:

Any solid fuel which includes material of non-mineral origin.

References

Limiting references

This place does not cover:

Candles	C11C 5/00

Special rules of classification

When a briquette comprises both mineral and non-mineral origin matter, it should be classified in both subgroups of mineral and non-mineral origin, i.e. C10L 5/04 and C10L 5/40 or below, depending on the origin.

C10L 5/403

{on paper and paper waste}

Definition statement

This place covers:

Fuel produced from paper waste, e.g. pulp or black liquor.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Paper production	D21

C10L 5/406

{on plastic}

Definition statement

This place covers:

Solid fuel based at least partly on plastic (waste) material.

C10L 5/42

on animal substances or products obtained therefrom {, e.g. manure}

Definition statement

This place covers:

Meat or bone waste from a slaughterhouse.

Excrement or manure waste.

C10L 5/44

on vegetable substances

Definition statement

This place covers:

Biomass, as broadly defined as possible, but not including animal substances, usable as a fuel.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Water treatment	C02F
Fertilizers	C05F 5/00

Special rules of classification

In case of combination of biomass and sewage/municipal waste covered by C10L 5/46, both symbols should be allocated.

If animal substances such as manure or bone waste are claimed as biomass, they should be classified in C10L 5/42.

C10L 5/442

{Wood or forestry waste}

Definition statement

This place covers:

Solid fuel based explicitly on wood or wood waste, i.e. a further limitation over biomass.

C10L 5/445

{Agricultural waste, e.g. corn crops, grass clippings, nut shells or oil pressing residues}

Definition statement

This place covers:

Solid fuel based on biomass comprising different agricultural waste other than wood.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Incinerators for field or garden waste	F23G 7/10

C10L 5/447

{Carbonized vegetable substances, e.g. charcoal, or produced by hydrothermal carbonization of biomass}

Definition statement

This place covers:

Solid fuels based on e.g. charcoal or other biomass which has been carbonised before treatment to solid fuel.

C10L 5/46

on sewage, house, or town refuse {(C10L 5/403, C10L 5/406 take precedence)}

Definition statement

This place covers:

House or town refuse, i.e. residential mixed wastes. Also includes pretreated house or townrefuse, which fraction is known as RDF (refuse derived fuel) or SRF (solid recovered fuel).

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Water treatment	C02F
Fertilizers	C05F 5/00

C10L 5/48

on industrial residues and waste materials {(C10L 5/403, C10L 5/406 take precedence)}

Definition statement

This place covers:

Waste on industrial level.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Incinerators for field or garden waste	F23G 7/10

C10L 7/00

Fuels produced by solidifying fluid fuels

Definition statement

This place covers:

Gel or gellified fuels. Compositions or process of manufacture thereof.

References

Limiting references

This place does not cover:

Candles	C11C 5/00

C10L 7/02

liquid fuels (lubricating compositions C10M)

Definition statement

This place covers:

Fuels when the fuel is solidified from a liquid fuel not based on an alcohol.

References

Limiting references

This place does not cover:

Lubricating compositions	C10M

C10L 7/04

alcohol

Definition statement

This place covers:

Fuels when the fuel is solidified from a liquid fuel based on an alcohol (of any chain).

C10L 8/00

Fuels not provided for in other groups of this subclass

Definition statement

This place covers:

Residual group for special applications which really cannot possibly be classified anywhere else.

C10L 9/00

Treating solid fuels to improve their combustion

Definition statement

This place covers:

Treatments of solid fuels after they have been formed, specifically to improve combustion in some way, e.g. heat value or contaminants in flue gas.

C10L 9/02

by chemical means

Definition statement

This place covers:

Means when chemicals are added and/or a chemical reaction is required to treat the solid fuel in order to improve combustion characteristics.

C10L 9/04

by hydrogenating

Definition statement

This place covers:

Methods of treating solid fuels by addition of hydrogenating compounds.

C10L 9/06

by oxidation

Definition statement

This place covers:

Methods of treating solid fuels by addition oxidising compounds.

C10L 9/08

by heat treatments, e.g. calcining

Definition statement

This place covers:

Treatments which consist mainly of heating the solid in order to improve its combustion characteristics.

C10L 9/083

{Torrefaction}

Definition statement

This place covers:

Torrefaction or bertinisation whereby the solid (waste) feed is treated around 150-350°C under low oxygen atmosphere to produce a more dense and valuable solid fuel product, e.g. low temperature- or pre-pyrolysis.

C10L 9/086

{Hydrothermal carbonization}

Definition statement

This place covers:

Hydrothermal carbonization, which can be defined as combined dehydration and decarboxylation of a fuel to raise its carbon content with the aim of achieving a higher calorific value. It is realized by applying elevated temperatures (180–220°C) to biomass in a suspension with water under saturated pressure for several hours.

C10L 9/10

by using additives

Definition statement

This place covers:

Treating solid fuels when any kind of additive is mixed with the solid to improve its combustion.

References

Limiting references

This place does not cover:

Addition of additive during combustion or at entry of combustion/ gasification/or other chamber	F02D 19/00, C10J

C10L 9/12

Oxidation means, e.g. oxygen-generating compounds

Definition statement

This place covers:

Compounds that facilitate oxidation or generate oxygen at combustion.

C10L 10/00

Use of additives to fuels or fires for particular purposes (additives for liquid carbonaceous fuels characterised by their chemical nature C10L 1/10; using binders for briquetting solid fuels C10L 5/10; using additives to improve the combustion of solid fuels C10L 9/10)

Definition statement

This place covers:

- Particular purposes for which additives or additive compositions to liquid, solid or gaseous fuels, mentioned in C10L 1/10, C10L 1/32, C10L 3/00, C10L 5/00, C10L 7/00, C10L 8/00, C10L 9/00 and their subgroups are used .
- Particular purposes for which additives or additive compositions are used in fires and inside the combustion processes.

Use of the additive for a specific purpose which is not one mentioned in one of the groups C10L 10/02 - C10L 10/18.

Use of the additive which is not a detergent or dispersant (C10L 10/18) to prevent, decrease or clean deposits (keep-clean, clean-up), antifouling additive.

Relationships with other classification places

The mechanical aspects of the combustion conditions, places, apparatuses where the fire or combustion take place are classified, when relevant, in section F of the CPC; the mechanical aspects of cleaning combustion emissions, residues, deposits in the combustion apparatus, exhaust, chimneys, are also classified, when relevant, in section F.

A combustion improver which decreases deposits from the combustion of a fuel containing it relatively to the deposits from the combustion of the same fuel but without the combustion improver, is classified in this group.

References

Informative references

Fuel containing the additive	C10L 1/10- C10L 1/308 and C10L 1/12- C10L 1/308, C10L 1/32, C10L 3/00 - C10L 9/00
Foam dispersion or prevention in liquids, by addition of chemical substances	B01D 19/04 - B01D 19/0495
Purification; separation; stabilisation; use of additives	C07B 63/04
Purification; Separation; Use of additives, e.g. for stabilisation	C07C 7/20
Anti-static materials	C09K 3/16

Compositions for treating boreholes or wells, compositions for preventing, limiting or eliminating depositions, e.g. for cleaning	C09K 8/52 - C09K 8/536
Anti-oxidant compositions; compositions inhibiting chemical change	C09K 15/00- C09K 15/34
Inhibiting fouling in apparatus for treatment or conversion of hydrocarbon oils by addition of antifouling agents	C10G 75/04
In lubricating oils, inhibition of oxidation, anti-oxidants, metal deactivation, antiseptic, biocidal, anti-foaming property	C10N 2030/10 - C10N 2030/18
Preserving fats, fatty substances, fatty oils by using additives, e.g. anti-oxidants	C11B 5/00- C11B 5/0092
Cleaning of, preventing corrosion or erosion in, or preventing unwanted deposits in, combustion engines	F02B 77/04
Controlling engines characterised by use of non-fuel substances added to the combustible mixtures	F02D 19/00, F02D 41/0025
Engine-pertinent apparatus for adding non-fuel substances or small quantities of secondary fuel to combustion-air, main fuel, or fuel-air mixture	F02M 25/00
Cleaning of fuel-injection apparatus	F02M 65/007, F02M 65/008
Removal or treatment of combustion products or combustion residues; Flues	F23J 1/00, F23J 3/00, F23J 9/00, F23J 15/00
Arrangement of devices for supplying chemicals to fire	F23J 7/00

Special rules of classification

When an additive or an additive composition are used for several purposes of interest, each purpose is classified in the corresponding group.

If the additive is added to the fuel, the fuel composition is classified in C10L 1/10-C10L 1/308, and/or eventually in C10L 1/32-C10L 1/328, C10L 3/00 - C10L 9/00.

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Deposits	Sediments or sludges coming from deterioration of liquid fuels in a storage vessel, pipes or apparatuses; Also solid carbonaceous residues from fuel combustion, on the walls of the combustion enclosure or apparatuses.

Synonyms and Keywords

In patent documents, the following words/expressions are often used as synonyms:

- Deposits, slag, tar, soot, ash or clinker.

C10L 10/02

for reducing smoke development

Definition statement

This place covers:

- The use of the additive for reducing smoke development, reducing the emissions of pollutants from fuels, and pollutants from their combustion like nitrogen oxides (NO_x), carbon monoxide

(CO), carbon dioxide (CO_2), sulfur oxides (SO_2), hydrocarbons, soot, particulate, particles, other pollutants like dioxins.

- Also use of additive to reduce emissions of dust from coal, emissions of volatile organic hydrocarbons (VOC) from liquid fuels.
- Use of an additive to decrease the vapour tension, volatility of a fuel.

A combustion improver which decreases emissions from the combustion of a fuel containing it relatively to the emissions from the combustion of the same fuel but without the combustion improver, is classified in this group.

Arrangements or devices for treating smoke or fumes	F23J 15/00

C10L 10/04

for minimising corrosion or incrustation

Definition statement

This place covers:

- The use of the additive for reducing corrosion of, or incrustation on, walls in contact with the fuels, with fuel vapours, with the combustion process, or with combustion emissions; also corrosion inhibitor, rust inhibitor.
- Use of the additive to decrease the corrosive nature of a fuel, of deposits, emissions coming from a fuel or its combustion.
- Use of the additive to protect the walls in contact with a fuel, its vapours, its deposits, or its combustion products, against corrosion coming from these chemical entities.

Inhibiting incrustation in apparatus for heating liquid	C23F 14/00
Cleaning of, preventing corrosion or erosion in, or preventing unwanted deposits in, combustion engines	F02B 77/04

C10L 10/06

for facilitating soot removal

Definition statement

This place covers:

- The use of the additive for facilitating soot removal, for modifying the consistence, the state, the nature of the combustion deposits in such a way that this deposit is easier removed; the deposit can be on the walls of the combustion enclosure, on the walls of the emission exhaust, of the chimney.
- The use of an additive, of a catalytic additive, which is combined, when the fuel combustion takes place, with the combustion products and decreases the ignition temperature of the combustion deposits formed, thus these deposits can be easier burnt in an exhaust apparatus; or the catalytic fuel or combustion additive is used to replenish the catalyst of a catalytic exhaust apparatus burning soot, deposits formed in the exhaust apparatus.

C10L 10/08

for improving lubricity; for reducing wear

Definition statement

This place covers:

- The use of the additive for improving the lubricity of the fuel, the lubricating power, the oily consistence of the fuel, for decreasing the wear, the friction of the fuel against the walls in its contact.
- Lubricity agent, anti-wear, friction inhibitor, lubricating agent or lubricant.

Relationships with other classification places

A lubricating additive composition well described can be also classified in C10M.

Animal or vegetable oils, fats, fatty substances or fatty acids	C11B, C11C

C10L 10/10

for improving the octane number

Definition statement

This place covers:

- The use of the additive for improving the octane number of a gasoline, of a fuel for a spark ignition internal combustion engine. Anti-knock agent.
- The use of the additive for improving the ignition properties of a gasoline, of a fuel for a spark ignition internal combustion engine.
- Use of an additive for improving the octane index of a gasoline.

Engine-pertinent apparatus for adding anti-knock agents to combustion-air, main fuel or fuel-air mixture	F02M 25/14

Synonyms and Keywords

In patent documents, the following abbreviations are often used:

RON	Research octane number
MON	Motor octane number

C10L 10/12

for improving the cetane number

Definition statement

This place covers:

- The use of the additive for improving the cetane number of a diesel fuel, of a fuel for a compression ignition internal combustion engine.
- The use of the additive for improving the ignition properties of a diesel fuel, of a fuel for a compression ignition internal combustion engine.
- Use of additive for improving the cetane index of a diesel fuel.

Explosives, thermic compositions, detonating or priming devices, fuses, chemical lighters or pyrophoric compositions	C06B, C06C

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

CN	Cetane number

C10L 10/14

for improving low temperature properties

Definition statement

This place covers:

- The use of the additive for improving low-temperature properties of fuels; cold flow improver; the use of the additive to improve the ability of the fuel to flow at low temperature, to decrease the temperature at which the fuel can flow, the temperature at which the fuel can pass through a filtration device, or the temperature at which wax can form a cloudy appearance.
- The use of the additive to modify the wax crystals formed when the fuel temperature is decreased, decrease their sizes, change their shapes, to keep the crystals dispersed, to improve the filterability at low temperatures of the fuel; the use of the additive to prevent precipitation and sedimentation of the wax crystals at low temperatures in the fuel.
- The use of the additive to decrease the cloud point, the wax appearance temperature, and/or the cold filter plugging point of the fuel.

In lubricating oils, use of the additive to improve the pour-point, the viscosity index	C10N 2030/02

Special rules of classification

The use of an additive for improving several low-temperature properties of a fuel, among which properties is decreasing the pour-point of the fuel, is classified in C10L 10/14 and in C10L 10/16.

Synonyms and Keywords

In patent documents, the following abbreviations are often used:

CFPP	Cold filter plugging point
CP	Cloud point
PP	Pour-point
WAT	Wax-appearance temperature

C10L 10/16

Pour-point depressants

Definition statement

This place covers:

- The use of the additive to decrease the pour-point of the fuel, to decrease the temperature at which the fuel flows.

In lubricating oils, use of the additive to improve the pour-point	C10N 2030/02

Special rules of classification

When the use of the additive to decrease the pour-point of the fuel is mentioned in it, the document is classified in C10L 10/16; If the improvement of an other low-temperature property is mentioned in the document, it is also classified in C10L 10/14.

Synonyms and Keywords

In patent documents, the following abbreviations are often used:

PP	Pour-point

C10L 10/18

use of detergents or dispersants for purposes not provided for in groups C10L 10/02 - C10L 10/16

Definition statement

This place covers:

- The use of the additive which is a detergent or a dispersant for purposes not provided for in groups C10L 10/00-C10L 10/16, for example for cleaning parts of the combustion apparatus or flues, exhaust pipes, for cleaning walls of vessels, pipes in contact with fuels.

Relationships with other classification places

The detergent compositions per se, if relevant, can be classified in C11D.

References

Limiting references

This place does not cover:

Use of the additive to prevent or clean deposits	C10L 10/00
Use of additives for facilitating soot removal	C10L 10/06

Informative references

Attention is drawn to the following places, which may be of interest for search:

Compositions for treating boreholes or wells, compositions for preventing, limiting or eliminating depositions, e.g. for cleaning	C09K 8/52 - C09K 8/536
Inhibiting fouling in apparatus for treatment or conversion of hydrocarbon oils by addition of antifouling agents	C10G 75/04
In lubricating oils, use of detergent or dispersant additive	C10N 2030/04
Methods for using cleaning compositions; special cleaning and washing methods for industrial or commercial equipment, e.g. engines	C11D 2111/20
Cleaning of, preventing corrosion or erosion in, or preventing unwanted deposits in, combustion engines	F02B 77/04
Cleaning of fuel-injection apparatus	F02M 65/007, F02M 65/008
Removing ash, clinker, or slag from combustion chambers; Removing solid residues from passages or chambers beyond the fire	F23J 1/00, F23J 3/00

C10L 11/00

Fire-lighters

Definition statement

This place covers:

Firelighter compositions, usually solid or gel/liquid.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Matches or manufacture thereof	C06F
Igniters in general, e.g. lighters containing fuel for cigarettes	F23Q

C10L 11/02

based on refractory porous bodies

Definition statement

This place covers:

Firelighter which is fire resistant itself and does not or hardly burn along.

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Matches	C06F
Firelighters containing fuel, e.g. cigarette lighters	F23Q 2/00

C10L 11/04

consisting of combustible material (matches C06F)

Definition statement

This place covers:

Compositions meant to start a fire and to burn along with it, e.g. barbecue lighters.

References

Limiting references

This place does not cover:

Matches	C06F

Informative references

Attention is drawn to the following places, which may be of interest for search:

Matches	C06F
Firelighters containing fuel, e.g. cigarette lighters	F23Q 2/00

C10L 11/06

of a special shape

Definition statement

This place covers:

Firelighters when the shape of the firelighter is special, i.e. not common and one of the main objects of the invention.

Special rules of classification

if shape or dimension is not the main object, but just additionally mentioned, this feature should not be classified here, but the Indexing Code should be used: C10L 2250/06.

C10L 11/08

Apparatus therefor

Definition statement

This place covers:

Apparatus for the production of firelighters and details thereof.
