

D06F

LAUNDERING, DRYING, IRONING, PRESSING OR FOLDING TEXTILE ARTICLES

Definition statement

This place covers:

- Domestic or laundry dry-cleaning apparatuses using volatile solvents;
- Domestic, laundry or tailors' ironing or other hot-pressing of clothes, linen or other textile articles;
- Controlling or regulating domestic laundry dryers (cf. [D06F 58/30](#)).

The Indexing Codes [D06F 2101/00](#) - [D06F 2101/20](#) cover user input for the control of domestic laundry washing machines, washer-dryers or laundry dryers.

The Indexing Codes [D06F 2103/00](#) - [D06F 2103/70](#) cover parameters monitored or detected for the control of domestic laundry washing machines, washer-dryers or laundry dryers.

The Indexing Codes [D06F 2105/00](#) - [D06F 2105/62](#) cover systems or parameters controlled or affected by the control systems of washing machines, washer-dryers or laundry dryers.

Relationships with other classification places

This subclass does not cover treatment of textiles by purely chemical means, which is covered by subclasses [D06L](#) and [D06M](#).

Apparatuses for wringing, washing, dry cleaning, ironing or other hot-pressing of textiles in manufacturing operations are covered by [D06B](#) and [D06C](#).

A document should be classified in [D06F](#) if:

- It mainly relates to the treatment of home textiles, the treatment of other kinds of textiles should generally be classified somewhere else.
- It generally (but not always) relates to a domestic appliance for treating a textile article (the machine may however be coin-operated).

Exceptions to the rule at point (II) above are:

[D06F 31/00](#), [D06F 43/00](#), [D06F 47/00](#), [D06F 58/12](#), [D06F 67/04](#), [D06F 71/00](#), [D06F 89/00](#) , [D06F 93/00](#), [D06F 95/00](#) as well as their subgroups.

Applications regarding washing machine components like e.g. pumps, electric motors, electronic devices, displays per se, i.e. applications which claim the technical features of those components without describing any particular interaction between said components and the household appliance do not usually belong to [D06F](#), but to the general classification entry of their function per se.

The above-mentioned devices are mainly seen as "black boxes" connected to the appliance so as to interact with the appliance's operation.

For example, if an application relates to a jog dial, a display or a selector switch, there must be an interaction between said devices and the appliance itself in order to classify said application in [D06F 34/28](#) (the display or the switch should e.g. be mounted to the front panel and/or should e.g. be used for selecting a washing program).

A set of claims including a claim like "a household appliance comprising the device (e.g. a pump) according to claim 1" does only mean that a device according to claim 1 may be used in a household appliance (e.g. in a washing machine) and that the application may be classified in [D06F](#) only if there's a clear interaction between the component and the appliance's operation.

Relationships with other classification places

It is not to be automatically assumed that such applications belong to [D06F](#), nor that a household appliance should automatically be a washing machine or a dryer (a household appliance could e.g. be a stove, an oven, a refrigerator etc.).

Electric motors	H02K

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Drum	Washing receptacle, rotating drum, washing drum or washing tub; the washing receptacle or drum is where the clothes are placed. Drums are generally perforated and are usually the rotating part of the washing machine, however, in D06F 13/00 and subgroups, D06F 15/00 and subgroups, D06F 17/00 and subgroups, D06F 18/00 and subgroups and D06F 19/00 and subgroups, the drum is always stationary.
Tub	Enclosing receptacle, external drum, external tub or fixed tub; the tub is the fixed part of the washing assembly, it contains the washing drum as well as the washing fluid; the tub is generally stationary and water-tight.
Washing assembly	Oscillating assembly, oscillating part or suspended part; it is generally composed by both the drum and the tub.
Lifter	Rib, elements mounted to a rotating drum and acting mainly on the clothes
Agitator:	Rotary and/or oscillating device mounted inside a stationary washing drum and acting mainly on the clothes
Impeller	Rotary devices mounted inside a stationary washing drum and acting mainly on the washing liquid

D06F 1/00**Washing receptacles (of washing machines [D06F 37/00](#), [D06F 39/00](#))****Definition statement***This place covers:*

Washing receptacles suitable for hand washing (e.g. wash-up bowls).

Illustrative example of subject matter classified in this group.

**References****Informative references***Attention is drawn to the following places, which may be of interest for search:*

Rubbing boards

[D06F 3/02](#)**D06F 1/06****Wash-boiler receptacles****Definition statement***This place covers:*

Wash-up bowls (generally made of metal) which can be heated by e.g. a gas burner.

Illustrative example of subject matter classified in this group.

D06F 1/08

with special means for water circulation by heat, e.g. fountain-washers

Definition statement

This place covers:

Wash-up bowls (generally made of metal) comprising means for concentrating the heat of e.g. a burner and for applying it in such a way (e.g. to a hot water circuit), that steam within the boiler is quickly generated and, together with hot water, it is discharged on the garments to be washed.

Illustrative example of subject matter classified in this group.

**D06F 1/10**

Covers; Handles

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

**D06F 1/12**

Racks or other rigid open containers of skeleton or like apertured construction supporting clothes in washing receptacles

Definition statement

This place covers:

Wire frame baskets or perforated metal containers suitable for supporting clothes in washing receptacles.

Illustrative example of subject matter classified in this group.

D06F 3/00

Hand rubbing apparatus (corrugated tub-walls [D06F 1/04](#))

Definition statement

This place covers:

Corrugated means against which the clothes are rubbed.

Illustrative example of subject matter classified in this group.

References

Limiting references

This place does not cover:

Wash-tubs with the tub walls or bottom having corrugations	D06F 1/04
------------------------------------------------------------	---------------------------

Special rules of classification

Wash-up bowls incorporating a corrugated surface have to be classified in [D06F 1/04](#) only.

Rubbing boards have to be classified in [D06F 3/02](#) only.

D06F 3/02

Rubbing boards

Definition statement

This place covers:

Corrugated boards against which the clothes are rubbed.

Illustrative example of subject matter classified in this group.

D06F 3/04

Hand rubbers, e.g. gloves with corrugated surfaces

Definition statement

This place covers:

Rubbing devices which are supposed to be used directly by hand.

Illustrative example of subject matter classified in this group.

D06F 5/00

Hand implements for washing purposes, e.g. sticks (hand rubbing appliances [D06F 3/00](#))

Definition statement

This place covers:

Hand implements which are specifically designed for uniformly distributing/stirring the washing agent and/or the laundry in the washing tub.

Illustrative example of subject matter classified in this group.

Definition statement

This place covers:

Laundry grippers specially designed for washing purposes.

Illustrative example of subject matter classified in this group.

D06F 7/00

Washing devices adapted to be used independently of any particular receptacle, e.g. for removable mounting on wash-tubs, bath-tubs, or the like

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

D06F 7/02

of the rotary-impeller type

Definition statement

This place covers:

Impellers or similar rotating bodies suitable for agitating the washing liquid.

Illustrative example of subject matter classified in this group.

D06F 7/04

of the vibrator type

Definition statement

This place covers:

Washing devices, wherein the agitation of the washing fluid is generally obtained by oscillating e.g. a solid flat surface with a steady uninterrupted rhythm.

Illustrative example of subject matter classified in this group.

D06F 7/06

agitating the washing liquid by air

Definition statement

This place covers:

Washing devices, wherein the washing action is obtained by agitating the washing liquid using e.g. air jets.

Illustrative example of subject matter classified in this group.

D06F 9/00

Brushing-type washing machines

Definition statement

This place covers:

Devices for washing home textiles comprising one or more brushing elements, wherein said brushing element comprises bristles hard enough to remove dirt but not so hard that they cause damage to the laundry.

Illustrative examples of subject matter classified in this group.

D06F 11/00**Washing machines using rollers, e.g. of the mangle type****Definition statement**

Illustrative example of subject matter classified in this group.

**D06F 33/30****Control of washing machines characterised by the purpose or target of the control (controlling processes of washer-dryers [D06F 33/50](#))****Definition statement***This place covers:*

The controlling processes of washing machines that are classified in this group and its subgroups according to their specific purpose, e.g. the optimization / improvement of the washing phase or the prevention of imbalance or noise. The further information relating to the (manual and/or automatic) input and the output of these controlling processes is classified with the mandatory indexing codes and any details of the control means per se, i.e. the "hardware" is classified in the groups relating to the details of the control means (see special rules of classification for this group and its subgroups).

Definition statement

Concept

The following picture schematically illustrates how a controlling process of a washing machine, washer-dryer or laundry dryer is classified based on how it works. An input signal (i.e. a user input as "manual input" or an automatically detected signal as "automatic input", e.g. by a sensors) is fed into a control unit as "control means", which depending on the purpose of the control sends corresponding command signals to the machine components.

A controlling process for a laundry treating apparatus (e.g. a washing machine) has a specific "control purpose" and implies the presence of a "control means" (e.g. a CPU), whereby the control means is usually a control unit which comprises a user interface (e.g. a control panel) and several sensors for the automatic detection of e.g. temperature, pressure, liquid level, etc.

Moreover, the control unit is usually configured to perform actions as "automatic output" (e.g. switching a heater ON/OFF, regulating the drum speed, etc.), depending on the purpose of the control and based on the input of the user and/or the signals provided by the sensors.

Example: washing machine - control method

Control method for a washing machine employing a control unit adapted to detect the level and the temperature of the washing liquid and to switch the tub heater ON/OFF based on the laundry load, as input by the user, such as to reduce the energy consumption.

Classification of the example:

- Purpose: [D06F 33/46](#) (Control of the energy or water consumption)
- Manual input: [D06F 2101/04](#) (Characteristics of laundry or load – Quantity, e.g. weight)
- Automatic input: [D06F 2103/16](#) (Washing liquid temperature); [D06F 2103/18](#) (Washing liquid level)
- Automatic output: [D06F 2105/10](#) (Temperature of washing liquids; Heating means therefor)
- Note: The method of the present example essentially concerns the control of the machine per se and, as such, it should not be classified in the [D06F 35/00](#) area, which relates to methods focused on the treatment of the laundry.

References

Limiting references

This place does not cover:

Controlling processes of washer-dryers	D06F 33/50
----------------------------------------	----------------------------

Informative references

Attention is drawn to the following places, which may be of interest for search:

Methods for washing, rinsing or spin-drying	D06F 35/005
Controlling processes for dishwashers	A47L 15/0018

Special rules of classification

It is mandatory to classify all relevant aspects related to: purpose, manual input, automatic input, automatic output and details of the control means.

- Purpose (washing machines) [D06F 33/30](#) - [D06F 33/48](#)
- Manual Input [D06F 2101/00](#) - [D06F 2101/20](#)
- Automatic Input [D06F 2103/00](#) - [D06F 2103/70](#)
- Automatic Output [D06F 2105/00](#) - [D06F 2105/62](#)
- Details of the Control Means [D06F 34/00](#) - [D06F 34/34](#)

Note: The methods in the present area essentially concern the control of the machine per se; as such, they should not be classified in [D06F 35/005](#), [D06F 35/006](#) and [D06F 35/007](#), which relate to methods focused on the treatment of the laundry; however, in exceptional cases where both aspects are important, classification symbols belonging to both areas might be assigned.

It is noted that [D06F 35/005](#) and subgroups relate to methods for treating the laundry whereas [D06F 33/00](#) and subgroups relate to devices and methods for controlling the appliance.

D06F 33/32

Control of operational steps, e.g. optimisation or improvement of operational steps depending on the condition of the laundry

Definition statement

This place covers:

The control of the individual operational steps or phases of a washing machine cycle.

D06F 33/34

of water filling

Definition statement

This place covers:

The control of individual operational steps concerning the water-filling phase.

Damping vibrations by displacing, supplying or ejecting a material, e.g. liquid, into or from counterbalancing pockets (in machines with a receptacle rotating or oscillating about a vertical axis)	D06F 37/245
Parameters of unbalance or noise monitored or detected for the control of domestic laundry washing machines, washer-dryers or laundry dryers	D06F 2103/26

D06F 33/50

Control of washer-dryers characterised by the purpose or target of the control

Definition statement

This place covers:

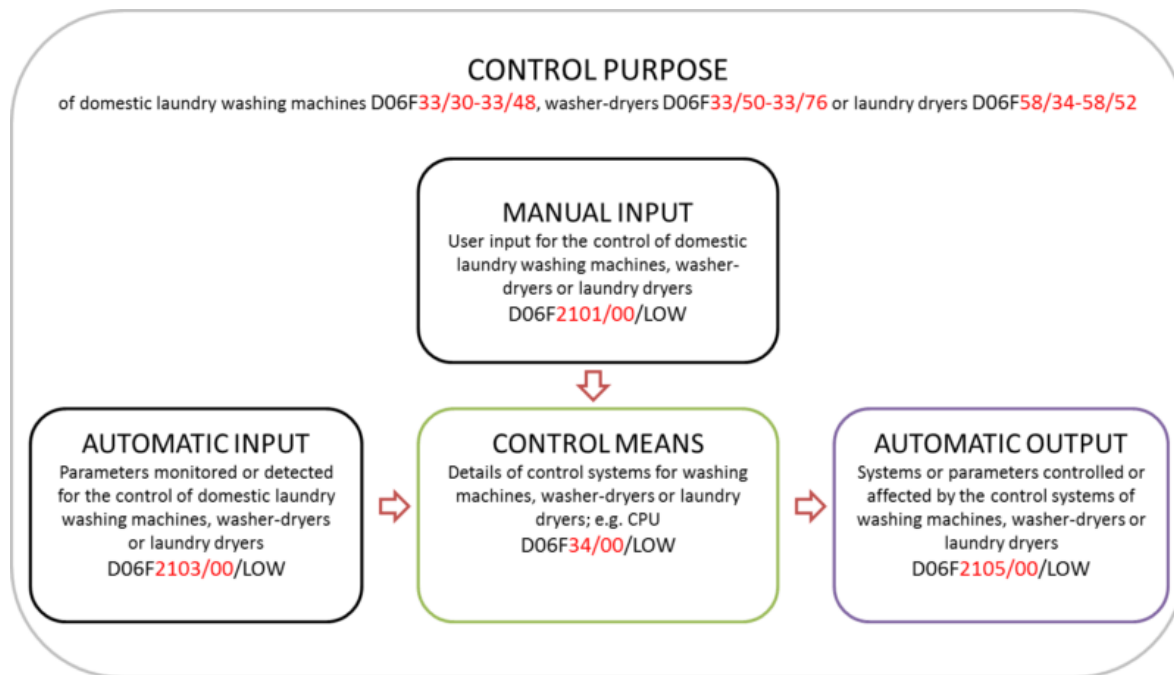

The controlling processes of washer-dryers that are classified in this group and its subgroups according to their specific purpose, e.g. the optimization / improvement of the washing phase or the prevention of imbalance or noise. The same classification rules set out for [D06F 33/30](#) also apply mutatis mutandis to [D06F 33/50](#) - [D06F 33/76](#), as shown in the schematic picture below. It is noted that a symbol belonging to the aforementioned range should only be given in case the control process applies specifically to a washer-dryer, and would therefore not work for a washing machine or a laundry dryer.

The further information relating to the (manual) input and the output of these controlling processes is classified with the mandatory indexing codes and any details of the control means per se, i.e. the "hardware" is classified in the groups relating to the details of the control means (see special rules of classification for this group and its subgroups).

Definition statement

Concept

The following picture schematically illustrates how a controlling process of a washing machine, washer-dryer or laundry dryer is classified based on how it works: an input signal (i.e. a user input as "manual input" or an automatically detected signal as "automatic input", e.g. by a sensors) is fed into a control unit as "control means", which depending on the purpose of the control sends corresponding command signals to the machine components.

The preceding image makes reference to the following symbols: [D06F 33/30-D06F 33/48](#), [D06F 33/50-D06F 33/76](#), [D06F 58/34-D06F 58/52](#), [D06F 2101/00](#), [D06F 2103/00](#), [D06F 34/00](#), [D06F 2105/00](#).

Example: washer-dryer

Washer-dryer provided with a control circuit, a control panel, an air heater and a temperature sensor for measuring the temperature of the drying air, whereby the user interface allows the user to set the maximum temperature of the drying air and the control unit is configured to regulate both the heater (e.g. by switching it ON/OFF) and the blower fan based on the temperature of the drying air.

Moreover, according to the description, the control aims to avoid damaging the laundry by overheating.

Classification of the example:

- Purpose: [D06F 33/52](#) (Control of the operational steps, e.g. optimisation or improvement of operational steps depending on the condition of the laundry)
- Manual input: [D06F 2101/18](#) (Target temperature for the drying process, e.g. low-temperature cycles)
- Automatic input: [D06F 2103/32](#) (Air properties – Temperature)
- Automatic output: [D06F 2105/28](#) (Electric heating); [D06F 2105/30](#) (Blowers)
- Washer-dryers: [D06F 25/00](#)

Note: As a general rule, all washer-dryers are classified in [D06F 25/00](#).

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Washing machines with receptacles, e.g. perforated, having a rotary movement, e.g. oscillatory movement, the receptacle serving both for washing and centrifugally draining and having further drying means, e.g. using hot air	D06F 25/00
---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	----------------------------

Special rules of classification

As a general rule, all washer-dryers are classified in [D06F 25/00](#).

It is mandatory to classify all relevant aspects related to: purpose, manual input, automatic input, automatic output and details of the control means.

- Purpose (washer-dryers) [D06F 33/50](#) - [D06F 33/76](#)
- Manual Input [D06F 2101/00](#) - [D06F 2101/20](#)
- Automatic Input [D06F 2103/00](#) - [D06F 2103/70](#)
- Automatic Output [D06F 2105/00](#) - [D06F 2105/62](#)
- Details of the Control Means [D06F 34/00](#) - [D06F 34/34](#)

Note: The methods in the present area essentially concern the control of the machine per se and as such, they should not be classified in the [D06F 35/00](#) area, which relates to methods focused on the treatment of the laundry. However, in exceptional cases where both aspects are important, classification symbols belonging to both areas might be assigned.

D06F 33/52

Control of the operational steps, e.g. optimisation or improvement of operational steps depending on the condition of the laundry

Definition statement

This place covers:

The control of operational steps, which are focused on the condition of the laundry.

D06F 43/00

Dry-cleaning apparatus {or methods} using volatile solvents
([D06F 9/00](#) - [D06F 41/00](#) take precedence)

Definition statement

This place covers:

Industrial dry-cleaning machines and dry-cleaning methods.

Illustrative example of subject matter classified in this group.

References

Limiting references

This place does not cover:

{Reclaiming or recovering the solvent from a mixture of solvent and contaminants, e.g. by distilling}

Definition statement

This place covers:

Solvent reclaiming or recovery arrangements for industrial dry-cleaning machines.

Illustrative example of subject matter classified in this group.

D06F 43/083

{Condensing arrangements}

Definition statement

This place covers:

Solvent condensing arrangements for industrial dry-cleaning machines.

Illustrative example of subject matter classified in this group.

D06F 43/085**{Filtering arrangements; Filter cleaning; Filter-aid powder dispensers}****Definition statement***This place covers:*

Solvent filtering / filter cleaning arrangements for industrial dry-cleaning machines.

Illustrative example of subject matter classified in this group.

**D06F 43/086****{Recovering the solvent from the drying air current}****Definition statement***This place covers:*

Industrial dry-cleaning machines comprising means for recovering the solvent from the drying air current.

Illustrative example of subject matter classified in this group.

**D06F 43/088****{Condensing arrangements}****Definition statement***This place covers:*

Industrial dry-cleaning machines comprising solvent condensing means for recovering the solvent from the drying air current.

Illustrative example of subject matter classified in this group.

D06F 45/00

Wringing machines with two or more co-operating rollers; Similar cold-smoothing apparatus

Definition statement

This place covers:

Wringing machines comprising two or more rotary pressing bodies, suitable for removing excess liquids from rags or any equivalent absorbent and pliant items.

Illustrative example of subject matter classified in this group.

D06F 45/02

wherein the pressure is transmitted by spring means

Definition statement

This place covers:

Wringing machines comprising two or more rotary pressing bodies, wherein pressure is exerted via spring means.

Illustrative example of subject matter classified in this group.

D06F 45/04

with hand-operated quick-release means

Definition statement

This place covers:

Wringing machines comprising two or more rotary pressing bodies and hand-operated pressure release means.

Illustrative example of subject matter classified in this group.

D06F 45/06

with automatically-operated quick-release means

Definition statement

This place covers:

Wringing machines comprising two or more rotary pressing bodies and automatically-operated pressure release means.

Illustrative example of subject matter classified in this group.

D06F 45/08**wherein the pressure is applied by fluid means****Definition statement***This place covers:*

Wringing machines comprising two or more rotary pressing bodies, wherein pressure is exerted via e.g. hydraulic means.

Illustrative example of subject matter classified in this group.

**D06F 45/10****with three or more co-operating rollers****Definition statement***This place covers:*

Wringing machines comprising three or more rotary pressing bodies

Illustrative example of subject matter classified in this group.

**D06F 45/12****combined with washing machines****Definition statement***This place covers:*

Wringing machines (comprising two or more rotary pressing bodies) permanently combined with a washing machine.

Illustrative example of subject matter classified in this group.

D06F 45/14

with means for removable attachment to washing machines, tables or other supports

Definition statement

This place covers:

Wringing machines (comprising two or more rotary pressing bodies) removeably attached to a washing machine, table or other support.

Illustrative example of subject matter classified in this group.

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

D06F 45/24

Frames guiding or housing the roller shafts; Stands for supporting the roller framework

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

D06F 45/26**Draining boards; Feed or discharge boards; Stripping means****Definition statement***This place covers:*

Illustrative example of subject matter classified in this group.

**D06F 45/28****Belt arrangements for guiding the linen between the rollers****Definition statement***This place covers:*

Illustrative example of subject matter classified in this group.

**D06F 47/00****Apparatus of the press type for expelling water from the linen****Definition statement***This place covers:*

Industrial pressing machines for removing excess liquids from wet clothing.

Illustrative example of subject matter classified in this group.

D06F 47/02

by a mechanically-actuated ram

Definition statement

This place covers:

Industrial pressing machines for removing excess liquids from wet clothing, comprising a mechanically-actuated ram.

Illustrative example of subject matter classified in this group.

D06F 47/04

by a fluid-actuated ram

Definition statement

This place covers:

Industrial pressing machines for removing excess liquids from wet clothing, comprising a fluid-actuated ram.

Illustrative example of subject matter classified in this group.

D06F 47/06

by a flexible diaphragm

Definition statement

This place covers:

Industrial pressing machines for removing excess liquids from wet clothing, comprising a flexible diaphragm.

Illustrative example of subject matter classified in this group.

D06F 47/08

Covers; Securing means therefor

Definition statement

This place covers:

Covers and securing means therefor, specially adapted for sealing industrial pressing machines for removing excess liquids from wet clothing.

Illustrative example of subject matter classified in this group.

D06F 49/00

Domestic spin-dryers or similar spin-dryers not suitable for industrial use

Definition statement

This place covers:

Household spin-dryers (general aspects and/or constructive details) which cannot be classified under any hierarchically lower group.

Illustrative example of subject matter classified in this group.

Drying in general	F26B

Special rules of classification

for the classification in [D06F 57/00](#) and its subgroups:

- supporting means mounted on pillars ([D06F 57/02](#) and [D06F 57/04](#)) are not considered "stands". Hence, foldable supporting means mounted on pillars are not classified in the subgroups [D06F 57/08](#) or [D06F 57/10](#) relating to stands only;
- supporting means specially adapted for attachment to walls, ceilings, stoves, or other structures or objects ([D06F 57/12](#) and subgroups) are considered neither "mounted on pillars" nor "stands". Hence, such supporting means are only classified in [D06F 57/12](#) and subgroups even if foldable.

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Stand	Supporting means, other than simple clothes-lines, for linen or garments to be dried or aired, comprising more than one leg for standing on the ground and being self-supporting, i.e. without being mounted to the ground or a further support.
-------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

D06F 57/02

mounted on pillars, e.g. rotatably {(sockets or holders for poles or posts

Attention is drawn to the following places, which may be of interest for search:

Drying in general	F26B
-------------------	----------------------

D06F 58/02

having dryer drums rotating about a horizontal axis

Definition statement

This place covers:

Domestic laundry drier having a drier drum rotating about a horizontal axis in general.

For instance: a domestic laundry drier having a drier drum rotating about a horizontal axis defined by a particular arrangement of conducting air inside the laundry drier, this particular arrangement involving inter alia the drum.

An example of such a domestic laundry drier in [D06F 58/02](#) is:

D06F 58/04

Details (controlling or regulating devices [D06F 34/00](#))

Definition statement

This place covers:

Details that are directly relating to the drier drum rotating about a horizontal axis of the domestic laundry drier.

Examples of such details of a domestic laundry drier in [D06F 58/04](#) include:

References

Limiting references

This place does not cover:

Controlling or regulating devices	D06F 34/00
-----------------------------------	----------------------------

Special rules of classification

In case an aspect of the detail falls also in [D06F 58/20](#) and its subgroups, i.e. this aspect of the detail is not restricted to laundry driers having a drum rotating about a horizontal axis, then also [D06F 58/20](#) or its relevant subgroup should be assigned.

For instance: a domestic laundry drier having a drier drum rotating about a horizontal axis and comprising an electric heating device specially shaped or adapted to the drier drum should be classified in both, [D06F 58/04](#) (aspect: specially shaped to the drier drum) and [D06F 58/26](#) (aspect: heating device).

D06F 58/06

Mountings for the rotating drums

Definition statement

This place covers:

Any detail related to the mounting of the rotating drum, for instance bearings or supports of the rotating drum.

An example of a detail of a mounting for a rotating drum in [D06F 58/06](#) is:

D06F 58/08

Driving arrangements

Definition statement

This place covers:

Device details or components of the domestic laundry drier directly related or linked to the driving arrangement of the drier drum.

For instance: the motor, mounting and support of the motor, as well as details of the drive system such as belts and pulleys.

An example of such a details of a driving arrangement in [D06F 58/08](#) is:

D06F 58/10**Drying cabinets or drying chambers having heating or ventilating means****Definition statement***This place covers:*

**Drying processes (controlling a series of operations in domestic laundry
dryers [D06F 58/32](#))**

Definition statement

This place covers:

Laundry drying processes per se, i.e. machine working methods characterized by several laundry treating steps.

Definition statement

It is noted that in this group the focus is set on the treating process the laundry undergoes.

Illustrative example of subject matter classified in this group.

The above diagram represents a typical drying method for laundry dryers, in which several laundry treating steps are performed, for example during the drying process the heater and the blower fan are subsequently turned ON/OFF while the drum is rotated.

Control of operations performed in domestic laundry dryers (control of operations performed in washer-dryers [D06F 33/50](#); details of control systems, e.g. for detecting or measuring specific parameters or for selection or indication of programs [D06F 34/00](#))

Definition statement

This place covers:

General control aspects that are not covered by [D06F 58/34](#) - [D06F 58/52](#).

D06F 58/34

characterised by the purpose or target of the control

Definition statement

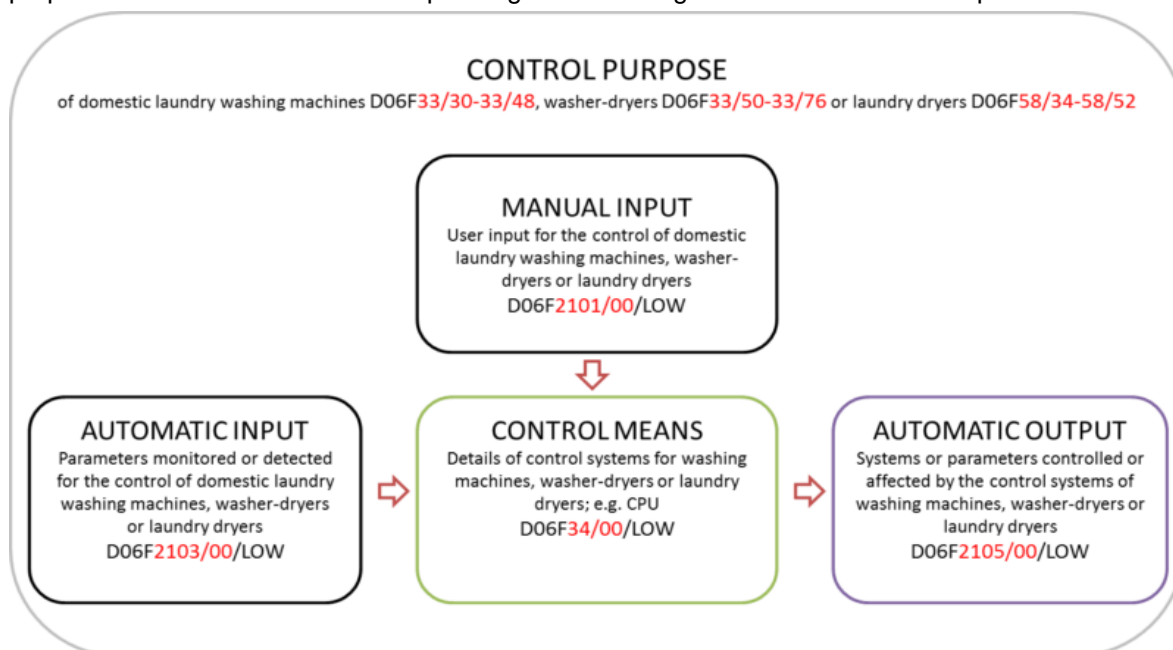

This place covers:

The controlling processes of laundry dryers that are classified in this group and its subgroups according to their specific purpose, e.g. the optimization / improvement of the drying phase or the prevention of laundry ignition.

The further information relating to the (manual) input and the output of these controlling processes is classified with the mandatory indexing codes and any details of the control means per se, i.e. the "hardware" is classified in the groups relating to the details of the control means (see special rules of classification for this group and its subgroups).

Concept

The following picture schematically illustrates how a controlling process of a washing machine, washer-dryer or laundry dryer is classified based on how it works. An input signal (i.e. a user input as "manual input" or an automatically detected signal as "automatic input, e.g. by a sensors) is fed into a control unit as "control means" which depending on the purpose of the control sends corresponding command signals to the machine components.

The preceding image makes reference to the following symbols: [D06F 33/30-D06F 33/48](#), [D06F 33/50-D06F 33/76](#), [D06F 58/34-D06F 58/52](#), [D06F 2101/00](#), [D06F 2103/00](#), [D06F 34/00](#), [D06F 2105/00](#).

A controlling process of a laundry treating apparatus (e.g. a laundry dryer) has a specific "control purpose" and implies the presence of a "control means" (e.g. a CPU), whereby the control means is usually a control unit which comprises a user interface (e.g. a control panel) and several sensors for the automatic detection of e.g. air temperature, laundry humidity, liquid level in the condensed water tank, etc.

Moreover, the control unit is usually configured to perform actions as "automatic output" (e.g. switching a heater ON/OFF, regulating the blower fan speed, etc.), depending on the purpose of the control and based on the input of the user and/or the signals provided by the sensors.

First example: laundry dryer - control method

Definition statement

Control method for a laundry dryer employing a control unit adapted to detect the temperature of the drying air and to switch the fan speed and the heater ON/OFF based on the target humidity of the laundry load, as input by the user, such as to reduce the operating time.

Classification of the example:

- Purpose: [D06F 33/70](#) (Control of the operating time)
- Manual input: [D06F 2101/16](#) (Target humidity for the drying process)
- Automatic input: [D06F 2103/32](#) (Air properties – temperature)
- Automatic output: [D06F 2105/28](#) (Electric heating); [D06F 2105/30](#) (Blowers)

Second example: washer-dryer

Washer-dryer provided with a control circuit, a control panel, an air heater and a temperature sensor for measuring the temperature of the drying air, whereby the user interface allows the user to set the maximum temperature of the drying air, and the control unit is configured to regulate the heater (e.g. by switching it ON/OFF) and the blower fan based on the temperature of the drying air. The control aims to avoid damaging the laundry by overheating.

Classification of the example:

- Purpose: [D06F 33/52](#) (Control of the operational steps, e.g. optimisation or improvement of operational steps depending on the condition of the laundry)
- Manual input: [D06F 2101/18](#) (Target temperature for the drying process, e.g. low-temperature cycles)
- Automatic input: [D06F 2103/32](#) (Air properties – Temperature)
- Automatic output: [D06F 2105/28](#) (Electric heating); [D06F 2105/30](#) (Blowers)
- Note: All washer-dryers have to be also classified, as a general rule, in [D06F 25/00](#).

Special rules of classification

It is compulsory to classify also all relevant aspects related to the Purpose, Manual Input, Automatic Input, Automatic Output and Details of the control means.

- Purpose [D06F 58/34](#)- [D06F 58/52](#)
- Manual Input [D06F 2101/00](#)- [D06F 2101/20](#)
- Automatic Input [D06F 2103/00](#)- [D06F 2103/70](#)
- Automatic Output [D06F 2105/00](#)- [D06F 2105/62](#)
- Details of the Control Means [D06F 34/00](#)- [D06F 34/34](#)

The above diagram represents a typical drying method for laundry dryers, belonging to [D06F 58/30](#) in which, during the drying process, the heater and the blower fan are subsequently turned ON/OFF while the drum is rotated. It is noted that [D06F 58/30](#) relates to methods for treating the laundry

whereas [D06F 58/34](#) and subgroups relate to devices for controlling the appliance (i.e. the focus is set on the treating process the laundry undergoes).

D06F 58/36

Control of operational steps, e.g. for optimisation or improvement of operational steps depending on the condition of the laundry

Definition statement

This place covers:

The control of individual operational steps, which are focused on the condition of the laundry.

D06F 58/38

of drying, e.g. to achieve the target humidity

Definition statement

This place covers:

The control of individual operational steps, which are focused on the achievement of one or more target drying parameters.

D06F 58/40

Control of the initial heating of the drying chamber to its operating temperature

Definition statement

This place covers:

The control of individual operational steps, which are focused on the initial heating phase.

D06F 58/42

by unheated air

Definition statement

This place covers:

Control methods or control arrangements having the purpose of steering and/or optimizing the air flow, wherein the air is unheated.

D06F 58/44

of conditioning or finishing, e.g. for smoothing or removing creases

Definition statement

This place covers:

Control methods or control arrangements of laundry dryers having the purpose of conditioning or finishing the laundry, e.g. using a laundry-conditioning agent like water, steam, perfume, starch.

This place covers:

Illustrative example of subject matter classified in this group.

**D06F 77/00****Arrangements for exerting pressure on, lifting, or guiding hand irons****Definition statement**

This place covers:

Illustrative example of subject matter classified in this group.

D06F 77/005

{using an electro-magnet or a permanent magnet in the iron or the ironing board}

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

**D06F 79/00****Accessories for hand irons****Definition statement**

This place covers:

For instance: water containers for filling the iron.

Illustrative example of subject matter classified in this group.

D06F 79/02

Stands or supports neither attached to, nor forming part of, the iron or ironing board

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

**D06F 79/023**

{with means for supplying current to the iron}

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

D06F 79/026

{for cordless irons}

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

D06F 79/04

Stoves or other heating means specially adapted for heating irons externally

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

Apparatuses for smoothing or removing creases from garments or other textile articles by formers, cores, stretchers or internal frames, with the application of heat or steam	D06F 73/00

D06F 89/00

Apparatus for folding textile articles with or without stapling

Definition statement

This place covers:
Devices for creating temporary folds.

References

Limiting references

This place does not cover:

Hand irons with means for supplying steam to the article being ironed	D06F 75/10
Devices for creating permanent folds	A41H 43/00

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Seam	generally formed by two pieces of cloth stitched and/or glued together
Fold	generally formed by folding a piece of cloth onto itself, such that a folding line is formed

D06F 89/005

{Manual folding devices, e.g. for folding bed sheets ([D06F 89/02](#) takes precedence)}

Definition statement

This place covers:

Manual folding devices for any kind of household textiles with the exception of textile articles to be worn.

Illustrative example of subject matter classified in this group.

D06F 89/02

of textile articles to be worn, e.g. shirts

Definition statement

This place covers:

Manual folding devices for textile articles to be worn, with exception of shirts or parts thereof.

Illustrative example of subject matter classified in this group.

D06F 89/023

{of shirts}

Definition statement

This place covers:

Manual folding devices for shirts or parts thereof.

Illustrative example of subject matter classified in this group.

D06F 89/026

{Details, e.g. collar holders}

Definition statement

This place covers:

Collar holders for manual folding devices for shirts.

Illustrative example of subject matter classified in this group.

D06F 91/00**Starching apparatus****Definition statement**

This place covers:

Manual devices for wetting clothes.

Illustrative example of subject matter classified in this group.

**D06F 93/00****Counting, sorting, or marking arrangements specially adapted for laundry purposes****Definition statement**

This place covers:

Industrial clothes counting or sorting arrangements.

Illustrative example of subject matter classified in this group.

D06F 93/005**{Marking arrangements}****Definition statement**

This place covers:

Marks as well as marking arrangements.
