

H03K

PULSE TECHNIQUE (measuring pulse characteristics [G01R](#); mechanical counters having an electrical input [G06M](#); information storage devices in general [G11](#); sample-and-hold arrangements in electric analogue stores [G11C 27/02](#); construction of switches involving contact making and breaking for generation of pulses, e.g. by using a moving magnet, [H01H](#); static conversion of electric power [H02M](#); generation of oscillations by circuits employing active elements which operate in a non-switching manner [H03B](#); modulating sinusoidal oscillations with pulses [H03C](#), [H04L](#); discriminator circuits involving pulse counting [H03D](#); automatic control of generators [H03L](#); starting, synchronisation or stabilisation of generators where the type of generator is irrelevant or unspecified [H03L](#); coding, decoding or code conversion in general [H03M](#))

Definition statement

This place covers:

- Methods, circuits, devices or apparatus using active elements operating in a discontinuous or switching manner for generating, counting, amplifying, shaping, modulating, demodulating or otherwise manipulating signals;
- Electronic switching not involving contact-making and braking;
- Logic circuits handling electric pulses.

In general, it should be noted that the word 'Pulse' in the title description is a clear limiting feature for this subclass.

References

Limiting references

This place does not cover:

measuring pulse characteristic	G01R
measuring electrical signals (to get a value)	G01R 17/00 - G01R 29/00
testing electrical circuits	G01R 31/00
mechanical counters having an electrical input	G06M ;
information storage devices in general	G11
sample-and-hold arrangements in electric analogue stores	G11C 27/02
construction of switches involving contact making and breaking for generation of pulses, e.g. by using a moving magnet	H01H
static conversion of electric power	H02M ;
generation of oscillations by circuits employing active elements which operate in a non-switching manner	H03B ;
modulating sinusoidal oscillations with pulses	H03C , H04L ;
discriminator circuits involving pulse counting	H03D ;
automatic control of generators	H03L
starting, synchronisation or stabilisation of generators where the type of generator is irrelevant or unspecified	H03L
coding, decoding or code conversion in general	H03M

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Differential	really means differential, not just complementary, i.e. two signals with an inverter in between are not differential
--------------	--

H03K 3/00

Circuits for generating electric pulses; Monostable, bistable or multistable circuits ([H03K 4/00](#) takes precedence; for digital computers [G06F 1/025](#), {[G06F 1/04](#)})

Definition statement

This place covers:

- Latches and flip-flops;
- Non-linear (switching) oscillators;
- Latching level shifters.

References

Limiting references

This place does not cover:

Duty cycle correction circuits	H03K 5/1565
Pulse width modulation	H03K 7/08
Random number generators	G06F 7/58
Linear (non-switching) oscillators	H03B

Application-oriented references

Examples of places where the subject matter of this place is covered when specially adapted, used for a particular purpose, or incorporated in a larger system:

Latches used in scan test of integrated circuits	G01R 31/318541
Latches and flip-flops used as static stores in semiconductor memories	G11C 11/41
Power pulse generators for driving lasers	H01S 5/42
Voltage- and current controlled oscillators	H03L 7/0995

Special rules of classification

Latching level shifters should be classified in the corresponding bistable circuit subgroups of this main group.

H03K 4/00

Generating pulses having essentially a finite slope or stepped portions (generation of supply voltages from deflection waveforms [H04N 3/18](#))

Definition statement

This place covers:

- Relaxation oscillators.
- Switched-capacitor oscillators
- Ramp and sawtooth generators.

Relationships with other classification places

Multivibrators generating pulse signals other than finite-sloped or staircase signals should be classified in [H03K 3/00](#).

References

Limiting references

This place does not cover:

Modifying slopes of pulses	H03K 6/04
Direct-digital frequency synthesizers	G06F 1/025
Generation of supply voltages from deflection waveforms	H04N 3/18

Special rules of classification

[H03K 4/026](#): Digital generators followed by a digital-to-analog converter to produce analogue output stepped signals.

H03K 5/00

Manipulating pulses not covered by one of the other main groups in this subclass (circuits with regenerative action [H03K 3/00](#), [H03K 4/00](#); by the use of non-linear magnetic or dielectric devices [H03K 3/45](#))

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Regenerative action	internal or external positive feed-back.
Delay line	transmission line

H03K 5/00006

{Changing the frequency (modulating pulses [H03K 7/00](#); frequency dividers [H03K 21/00](#) - [H03K 29/00](#); additive or subtractive mixing of two pulse rates into one [G06F 7/605](#); pulse rate dividers [G06F 7/68](#))}

Definition statement

This place covers:

Mostly pulse rate multiply by 2 circuits based on delaying and combining.

References**Limiting references***This place does not cover:*

Pulse frequency multipliers	G06F 7/68
-----------------------------	---------------------------

H03K 5/003**Changing the DC level (television signals [H04N 3/00](#))****References****Limiting references***This place does not cover:*

Level shifters interfacing between logic families or coupling logic circuit stages	H03K 19/0175
--	------------------------------

H03K 5/01**Shaping pulses (discrimination against noise or interference [H03K 5/125](#))****References****Informative references***Attention is drawn to the following places, which may be of interest for search:*

For reducing generated interference	H03K 17/16 , H03K 19/00346
For impedance matching	H03K 19/00 , H04L 25/00
For reducing power consumption	H03K 19/0008
For baseband data transmission	H04L 25/0286 , H04L 25/03834

H03K 5/04**by increasing duration; by decreasing duration****Definition statement***This place covers:*

Also used for slew rate control circuits.

H03K 5/06**by the use of delay lines or other analogue delay elements****Definition statement***This place covers:*

For instance circuits for staggering turn on signals.

H03K 5/065**{using dispersive delay lines}****Definition statement***This place covers:*

Delay lines having propagation speed depending on input frequency.

H03K 5/08**by limiting; by thresholding; by slicing, i.e. combined limiting and thresholding (H03K 5/07 takes precedence; comparing one pulse with another H03K 5/22; providing a determined threshold for switching H03K 17/30)****Definition statement***This place covers:*

Clamping circuits in general

References**Limiting references***This place does not cover:*

For details of threshold comparators	H03K 5/24 , G01R 19/165 , H03F 3/45
Clamping for ESD protection	H01L 27/0251

H03K 5/084**{modified by switching, e.g. by a periodic signal or by a signal in synchronism with the transitions of the output signal}****Definition statement***This place covers:*

The value of the threshold is generated by feedback AND the value is modified by switching.

H03K 5/086**{generated by feedback}****Definition statement***This place covers:*

i.e. the value of the threshold is generated by feedback.

H03K 5/088

{modified by switching, e.g. by a periodic signal or by a signal in synchronism with the transitions of the output signal}

Definition statement

This place covers:

The switching only relating to the switching instants.

References

Limiting references

This place does not cover:

If the value of the threshold being switched is generated by feedback	H03K 5/086
If the value is generated by feedback AND modified by switching	H03K 5/088

H03K 5/12

by steepening leading or trailing edges

Definition statement

This place covers:

Mostly used for pulse compression circuits using non-linear transmission lines having propagation speed depending on input amplitude, such as diode loaded transmission lines, to steepen one of the pulse edges and slow the other.

References

Limiting references

This place does not cover:

Changing the slew rate of leading and/or falling pulses in general	H03K 5/01 , H03K 5/04 , H03K 5/06
Accelerating switching	H03K 17/04 , H03K 19/01

H03K 5/1252

Suppression or limitation of noise or interference (specially adapted for transmission systems [H04B 15/00](#), [H04L 25/08](#))

Definition statement

This place covers:

Mostly suppression of glitches in binary signals by delay and subsequent logic combination with the original signal.

Some documents (often also classified in [H03K 5/156](#) or [H03K 5/1565](#)) relate to phase noise suppression in (interpolated) clock signals.

References

Limiting references

This place does not cover:

Suppressing noise by slew rate control	H03K 5/04 , H03K 17/16 , H03K 19/00346
--	---

Special rules of classification

For glitches produced when switching from one clock signal to another [G06F 1/08](#) takes precedence.

H03K 5/13

Arrangements having a single output and transforming input signals into pulses delivered at desired time intervals {(measuring time intervals using electronic timing, e.g. counting means [G04F 1/005](#))}

Definition statement

This place covers:

- Mainly used for delay circuits but also for some generic pulse circuits having multiple inputs and a single output
- Phase interpolation

Special rules of classification

Additional aspects are classified as follows

Delay [H03K 2005/00013](#)

Phase [H03K 2005/00286](#)

Pulse [H03K 2005/00293](#)

Phase interpolation circuits [H03K 2005/00052](#)

H03K 5/131

Digitally controlled

Special rules of classification

Also classify in: [H03K 2005/00058](#) (controlled by a digital setting)

H03K 5/135

by the use of time reference signals, e.g. clock signals

Definition statement

This place covers:

- Synchronising a signal to a clock signal
- Using a clock signal as a reference for controlling a delay, e.g. synchronous mirror delay circuits (SMDs), in which a detected number of gates in a first delay line - through which a signal edge propagates in a predetermined time defined by the reference clock - is used for controlling the number of delay elements in a second delay line for compensation.

References

Limiting references

This place does not cover:

Synchronisation of pulses generated from circuits classified in H03K 4/00	H03K 4/90
Synchronisation of clock signals in data processing equipment	G06F 1/12
Clocked shift registers	G11C 19/00
PLL, DLL	H03L 7/08
Synchronisation in TDM systems	H04J 3/00
Synchronising data receiver with transmitter, e.g. using clock data recovery	H04L 7/00

H03K 5/15

Arrangements in which pulses are delivered at different times at several outputs, i.e. pulse distributors (distributing, switching or gating arrangements [H03K 17/00](#))

H03K 9/00

Demodulating pulses which have been modulated with a continuously-variable signal

Definition statement

This place covers:

Only for documents not showing the modulator or where the demodulator is clearly the main aspect.

H03K 17/00

Electronic switching or gating, i.e. not by contact-making or -braking (selection of the stylus or auxiliary electrode in electric printing [B41J 2/405](#); sample-and-hold arrangements [G11C 27/02](#); switching or interrupting devices in waveguides [H01P](#); gated amplifiers [H03F 3/72](#); switching arrangements for exchange systems using static devices [H04Q 3/52](#))

Definition statement

This place covers:

- Composite switches: multiple types of transistors form a switching unit e.g. IGBT
- Output circuit: drain-source or collector-emitter path including load
- Input circuit: means connected to gate- or base-connection
- Feedback from the output to the input circuit: does not include e.g. common source or emitter connections as a voltage reference

H03K 17/002

{Switching arrangements with several input- or output terminals (code converters [H03M 5/00](#), [H03M 7/00](#))}

Definition statement

This place covers:

General multiplexers (block diagrams)

Special rules of classification

More detailed structures are classified as follows:

bipolar transistor based mux circuits: [H03K 17/62](#) and subgroups

field-effect transistor based mux circuits: [H03K 17/693](#)

diode based mux circuits: [H03K 17/76](#)

Definition statement

This place covers:

For practical purposes also power supply details of non-magnetic touch sensors.

H03K 17/9515**{using non-linear magnetic devices}****Definition statement***This place covers:*

Also bistable magnetic elements (Barkhausen effect, Wiegand effect, Matteucci effect).

References**Informative references***Attention is drawn to the following places, which may be of interest for search:*

Electronic switching or gating using a magnetic movable element	H03K 17/97
Wiegand effect	G01P
Barkhausen effect	G01P 3/488

H03K 17/9517**{using galvanomagnetic devices}****Definition statement***This place covers:*

Hall effect sensors, magnetoresistance.

References**Informative references***Attention is drawn to the following places, which may be of interest for search:*

If target is magnetic:	H03K 17/97
Hall effect:	G01R 33/07 , G01D 5/145
Magnetoresistance:	G01R 33/09

H03K 17/952**{using inductive coils}****Special rules of classification**[H03K 17/9537](#) takes precedence.**H03K 17/9537****{in a resonant circuit}****Definition statement***This place covers:*

LC-resonant circuit in general (e.g. signal is interrogation pulse, usually generating damped or decaying oscillations)

H03K 17/9542**{forming part of an oscillator}****Definition statement***This place covers:*

LC-resonant circuit forming part of oscillator; the variable parameter is undetermined

H03K 17/9545**{with variable frequency}****Definition statement***This place covers:*

LC-resonant circuit forming part of oscillator; the variable parameter is oscillation frequency

H03K 17/9547**{with variable amplitude}****Definition statement***This place covers:*

LC-resonant circuit forming part of oscillator; the variable parameter is oscillation amplitude

H03K 17/955**using a capacitive detector****Definition statement***This place covers:*

Charge transfer, phase comparison, frequency shift, resistance-capacitance timing circuits

References**Limiting references***This place does not cover:*

Electrically operated windows or roofs	E05F 15/00
Distance measurement	G01D 5/24

Informative references*Attention is drawn to the following places, which may be of interest for search:*

Capacitive touch switches	H03K 17/962
Detection of varying capacitance	G01D 5/24
Housings for sensors	G01D 11/00
Measuring capacitance	G01R 27/2605

H03K 17/96

Touch switches

Definition statement

This place covers:

Constructional details, detection principles, simulation of slider, key illumination details

H03K 17/962

{Capacitive touch switches}

Definition statement

This place covers:

Detection principle

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Measuring capacitance	G01R 27/2605
-----------------------	------------------------------

H03K 17/9622

{using a plurality of detectors, e.g. keyboard}

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Digitisers by capacitive means	G06F 3/044
--------------------------------	----------------------------

H03K 17/9625

{using a force resistance transducer}

Definition statement

This place covers:

Means for interpreting an external force as a variable resistance (e.g. strain gauges)

References

Limiting references

This place does not cover:

Resistive touch switches	H03K 17/9645
--------------------------	------------------------------

Informative references

Attention is drawn to the following places, which may be of interest for search:

Measuring force or stress in general	G01L 1/20
Measuring force or stress using distributed sensing elements	G01L 1/205
Digitisers using force sensing means	G06F 3/0414
Adjustable resistors adjustable by mechanical pressure of force	H01C 10/10
Adjustable resistors by using means responding to magnetic or electric fields, e.g. by addition of magnetisable or piezoelectric particles to the resistive material	H01C 10/103
Adjustable resistors on resistive material dispersed in an elastic material	H01C 10/106
Adjustable by changing surface pressure between resistive masses or resistive and conductive masses	H01C 10/12
Switches with contacts carried by or formed from layers in a multilayer structure, e.g. membrane switches	H01H 13/702
Switches characterised by the material of the contacts, e.g. conductive polymers	H01H 13/785

H03K 17/9627

{Optical touch switches}

Definition statement

This place covers:

ONLY documents which disclose reflection on a permanent interface surface

H03K 17/9629

{using a plurality of detectors, e.g. keyboard}

Definition statement

This place covers:

Simulation of slider, in combination with display

References**Informative references**

Attention is drawn to the following places, which may be of interest for search:

Digitisers by opto-electronic means	G06F 3/042
-------------------------------------	----------------------------

H03K 17/9638

{using a light guide}

Definition statement

This place covers:

With deformation of the light guide

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Touch	Deformation
-------	-------------

H03K 17/9645

{Resistive touch switches}

Definition statement

This place covers:

An object (e.g. finger) provides path for current

H03K 17/965

Switches controlled by moving an element forming part of the switch

Definition statement

This place covers:

Tactile feedback, illuminated, rotary, ...

References

Limiting references

This place does not cover:

Joysticks with analog output	G05G 9/047
------------------------------	----------------------------

H03K 17/968

using opto-electronic devices

References

Limiting references

This place does not cover:

Optical rotary encoders per se	G01D 5/3473
--------------------------------	-----------------------------

H03K 17/969

having a plurality of control members, e.g. keyboard

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Coding in connection with keyboards or like devices using opto-electronic means	H03M21 1/26
---	--------------------

H03K 17/97

using a magnetic movable element

Definition statement

This place covers:

Type of magnetic sensor: inductance, hall sensor, magnetoresistance

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Hall sensors	G01D 5/145
--------------	----------------------------

H03K 17/975

using a capacitive movable element

Definition statement

This place covers:

The movable part is an electrode forming part of the switch or the dielectric

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Mechanical means for transferring the output of a sensing member by varying capacitance	G01D 5/24
---	---------------------------

H03K 19/00

Logic circuits, i.e. having at least two inputs acting on one output; Inverting circuits {(inverting circuits used as delay elements [H03K 5/13](#))}

Definition statement

This place covers:

Circuits having at least two inputs acting on one output inverting circuits or buffers.

Relationships with other classification places

When a circuit is used or adapted for switching a load, it is classified in [H03K 17/00](#). When it is used/ adapted for driving a logic circuit (e.g. output buffer), it goes to [H03K 19/00](#).

References

Limiting references

This place does not cover:

Inverting circuits used as delay element	H03K 5/13
Clock generation/distribution	G06F 1/04

Program control	G06F 9/00
Hot Plugging (device-to-bus)	G06F 13/4081
CAD, Layout and Routing	G06F 17/50
I/O data interface arrangement	G11C 7/10
ESD protection	H01L 27/0248
Emergency protective circuits	H02H
Baseband systems (for transmission): line drivers, impedance matching, termination	H04L 25/02

Informative references

Attention is drawn to the following places, which may be of interest for search:

Nanotechnology logic	B82Y 10/00
----------------------	----------------------------

Special rules of classification

The groups [H03K 19/00369](#) take precedence over [H03K 19/0005](#)

[H03K 19/003](#): Circuits for increasing the reliability, not for notifying the user that a failure took place

[H03K 19/00323](#): Skew compensation

[H03K 19/00346](#): Slope control, slew rate adaptation

[H03K 19/007](#): Circuits in this class go, when they fail, to a safe state. They do not notify the user of a failure

[H03K 19/01](#) covers accelerating switching in logic circuits and should not be confused with [H03K 17/04](#) which covers accelerating the switching of a switch

[H03K 19/177](#): Field Programmable Gate Arrays (FPGA).

H03K 21/00

Details of pulse counters or frequency dividers {(number-of-one counters [G06F 7/607](#))}

Definition statement

This place covers:

Details of logic circuits having electric(digital) pulses as input signals and either counting incoming pulses or producing an output pulse stream based on the incoming pulse stream having a modified pulse repeating period.

References

Limiting references

This place does not cover:

Changing Frequency	H03K 5/00006
High Security Counting	G01C 22/02
Measuring Pulse Width Time	G01R 29/00

Coincidence Detection	G01T1/72
Non-integer Counting and Performing Operations by counting	G06F 7/60
Member-of-one (population) Counter	G06F 7/607
Binary Multiplication and Pulse rate divider	G06F 7/62 - G06F 7/68
PLLs including Dividers	H03B , H03L

H03K 21/02

Input circuits

Definition statement

This place covers:

Special logic at input for pulse treatment e.g. pulse shaping

Illustrative examples of subject matter classified in this group:

Figur 2

Figure taken from DE3842874

H03K 21/08**Output circuits****Definition statement**

This place covers:

Special logic at register outputs e.g. for a counter value dependent reset.

* 2 *

Figure taken from JP57199337

H03K 21/16

Circuits for carrying over pulses between successive decades

Definition statement

This place covers:

Logic counter having multiple counting stages including a carry over bit between stages.

Figure taken from US5,946,369

H03K 21/18

Circuits for visual indication of the result

Definition statement

This place covers:

Logic for representing the result to a user.

Figure taken from DE3031612

H03K 21/40

Monitoring; Error detection; Preventing or correcting improper counter operation

Definition statement

This place covers:

Monitoring whether an error occurred during the counting process (not the process producing the pulses)

Figure taken from DE2550177

H03K 23/00

Pulse counters comprising counting chains; Frequency dividers comprising counting chains ([H03K 29/00](#) takes precedence)

Definition statement

This place covers:

Logic for digital counting chains used in pulse counters or frequency dividers

H03K 23/001

{using elements not covered by groups [H03K 23/002](#) and [H03K 23/74](#) - [H03K 23/84](#)}

Definition statement

This place covers:

Other elements as complementary IGFET's, electrically-ignited compounds e.g. pyrotechnical static relays

H03K 23/004

{Counters counting in a non-natural counting order, e.g. random counters}

Definition statement

This place covers:

Detailed counting encoding scheme.

H03K 23/40

Gating or clocking signals applied to all stages, i.e. synchronous counters
{([H03K 23/74](#) - [H03K 23/84](#) take precedence)}

Definition statement

This place covers:

Details regarding the clock used for triggering the counting of incoming pulses

H03K 23/58

Gating or clocking signals not applied to all stages, i.e. asynchronous counters
([H03K 23/74](#) - [H03K 23/84](#) take precedence)

Definition statement

This place covers:

Counter with a "rippling" trigger pulse form stage to stage - asynchronous counters.

H03K 23/64

with a base or radix other than a power of two ([H03K 23/40](#) - [H03K 23/62](#) take precedence)

Definition statement

This place covers:

Variable counting base, non-integer or odd-number counters.

H03K 25/00

Pulse counters with step-by-step integration and static storage; Analogous frequency dividers

Definition statement

This place covers:

Static storage type counters - e.g. capacitive type

Figure taken from EP0916188

H03K 27/00

Pulse counters in which pulses are continuously circulated in a closed loop;
Analogous frequency dividers (feedback shift register counters [H03K 23/54](#))

Definition statement

This place covers:

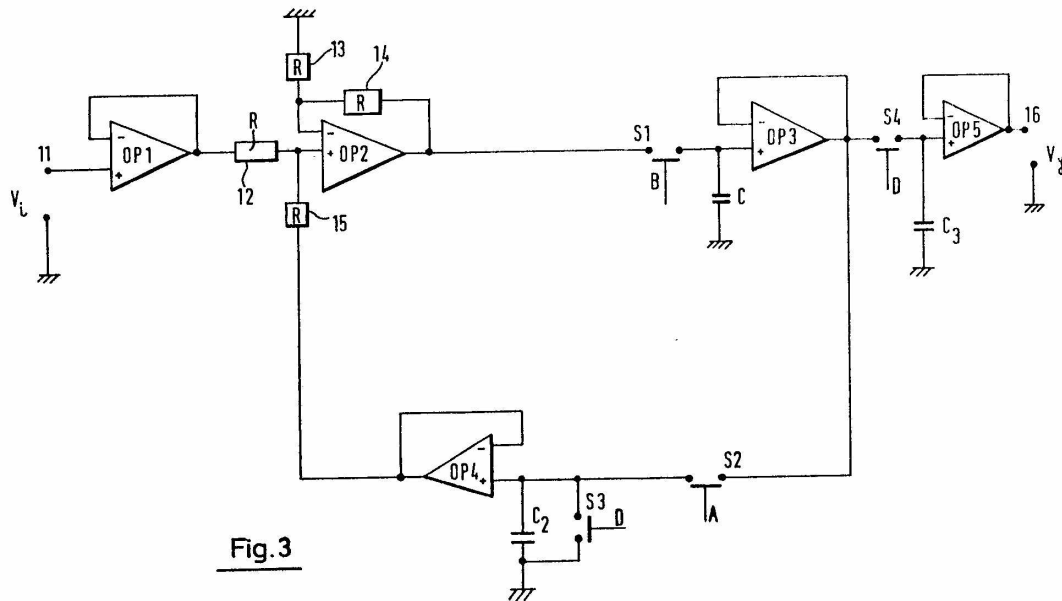

Figure taken from GB2008296.

H03K 29/00

Pulse counters comprising multi-stable elements, e.g. for ternary scale, for decimal scale; Analogous frequency dividers

Definition statement

This place covers:

A triggering pulse is generated in response to each input signal to be counted. The triggering pulse is applied to the device to change the voltage across the device. The voltage across the device is output as an indication of the number of received input signals. The device may be a resonant tunnelling

diode with multiple peaks in its current versus voltage characteristic. The device may be a resonant tunnelling diode with multiple peaks in its current versus voltage characteristic.

Figure taken from US 5,033,069
