B41J TYPEWRITERS; SELECTIVE PRINTING MECHANISMS, i.e. MECHANISMS PRINTING OTHERWISE THAN FROM A FORME; CORRECTION OF TYPOGRAPHICAL ERRORS

NOTES

- 1. This subclass covers:
 - manually controlled power-operated apparatus or apparatus of this type with additional control by input of recorded information, e.g. on punched cards or tapes;
 - the "print-out" features of apparatus controlled by record carriers or electric signals in so far as these are of general interest, e.g. impression, inking, line-spacing mechanisms, printing heads.
- 2. This subclass does not cover:
 - electrical features of apparatus controlled by record carriers or electric signals and of interest apart from the "print-out" features of said apparatus;
 - · apparatus controlled by record carriers or electric signals, as a whole.
- 3. In this subclass, the following term is used with the meaning indicated:
 - "paper" covers also similar flexible copy material;
 - "printing material" covers both paper and temporary record carriers from which records are transferred to a paper, but does not cover printing masters, e.g. formes.

Kinds of typewriters or of selective printing mechanisms		1/28	Carriers stationary for impression, e.g. with the
1/00	Typewriters or selective printing mechanisms characterised by the mounting, arrangement or disposition of the types or dies	1/30	 types or dies not moving relative to the carriers with the types or dies moving relative to the carriers or mounted on flexible carriers
1/02	 with separate or detached types or dies 	1/32	 the plane of the type or die face being parallel to the axis of rotation, e.g. with type on the
1/04	with types or dies carried upon levers or radial arms, e.g. manually operated (B41J 1/16 takes		periphery of cylindrical carriers (B41J 1/60 takes precedence)
1/06	precedence)	1/34	Carriers rotating during impression
1/06 1/08	on power-operated levers or armswith types or dies carried on sliding bars or rods	1/36	 Carriers sliding for impression, e.g. manually operated
1/10	on end surfaces thereof	1/38	• • • • power operated
1/12	• on side surfaces thereof, e.g. fixed thereto	1/40	Carriers swinging for impression
1/14	• • • the types or dies being movable relative to the bars or rods (mounted on flexible bars or rods	1/42	about an axis parallel to the axis of rotation of the carrier
	<u>B41J 1/16</u>)	1/44	Carriers stationary for impression
1/16	 with types or dies arranged in stationary or sliding cases or frames or upon flexible strips, plates, bars 	1/46	Types or dies fixed on wheel, drum, cylinder, or like carriers
	or rods	1/48	with a plurality of carriers, one for each
1/18	• with types or dies strung on wires or rods		character space
1/20	 with types or dies mounted on endless bands or the like 	1/50	• • • • with one or more carriers travelling across copy material in letter-space direction
1/22	 with types or dies mounted on carriers rotatable for selection 	1/52	with copy material moving in the letter- space direction, and the carrier mounting
1/24	• • the plane of the type or die face being perpendicular to the axis of rotation (B41J 1/60)	1/54	being fixed relative to the machine Types or dies movable on wheel, drum,
	takes precedence)	1/34	cylinder or like carriers
1/243	• • • {Mounting or fixing the carriers}	1/56	Types or dies on shuttles or like loose
1/246	• • • {Cartridges for the carriers}	1,00	carriers
1/26	• • Carriers moving for impression (B41J 1/27)	1/58	Types or dies upon arcuate bars
	takes precedence)	1/60	• with types or dies on spherical, truncated-spherical,
1/27	Carriers moving during impression		or like surfaces

2/00	Typewriters or selective printing mechanisms	2/04505 {aiming at correcting alignment}
	characterised by the printing or marking process for which they are designed (mounting, arrangement	2/04506 { aiming at correcting manufacturing tolerances}
	or disposition of types or dies <u>B41J 1/00</u>)	2/04508 {aiming at correcting other parameters}
	NOTES 1. This group <u>covers</u> devices reproducing only	2/0451 {for detecting failure, e.g. clogging, malfunctioning actuator}
	a discrete number of tones, whereas group H04N 1/00 covers devices used for the	2/04511 {for electrostatic discharge protection}
	reproduction of documents or the like, which	2/04513 {for increasing lifetime}
	devices are capable of reproducing continuous tone value scales.	2/04515 {preventing overheating}
	2. In this group, the following expressions are used	2/04516 {preventing formation of satellite drops}
	with the meanings indicated:	2/04518 {reducing costs}
	 "ink jet" involves the projection of ink on to the printing material, e.g. paper, through a nozzle as a stream of droplets or particles of colouring 	2/0452 {reducing demand in current or voltage}
	matter	2/04521 {reducing number of signal lines
	• "continuous ink jet" means a jet of ink	needed}
	transformed into a continuous stream of	2/04523 {reducing size of the apparatus}
	droplets or particles of colouring matter after having left the nozzle	2/04525 {reducing occurrence of cross talk}
	 "ink spray" means a spray of ink transported 	2/04526 {controlling trajectory} 2/04528 {aiming at warming up the head}
	by a stream of charged particles or air on to the	2/0453 {anning at warming up the nead}
	printing material	chamber}
2/005	 characterised by bringing liquid or particles selectively into contact with a printing material 	2/04531 {controlling a head having a heater in the manifold}
	(printing by selective application of impact or pressure on a printing or impression-transfer	2/04533 {controlling a head having several actuators per chamber}
	material B41J 2/22)	2/04535 (involving calculation of drop size,
2002/0052	• • {Control methods or devices for non ink jet	weight or volume}
2002/0055	heads}	2/04536 {using history data} 2/04538 {involving calculation of heater
2002/0033	 {Heating elements adjacent to nozzle orifices of printhead for warming up ink meniscuses, 	resistance}
	e.g. for lowering the surface tension of the ink meniscuses}	2/0454 {involving calculation of temperature}
2/0057	where an intermediate transfer member receives	2/04541 {Specific driving circuit}
_,	the ink before transferring it on the printing	2/04543 {Block driving}
	material}	2/04545 {Dynamic block driving}
2/01	Ink jet	2/04546 {Multiplexing}
2002/012	• • { with intermediate transfer member }	2/04548 {Details of power line section of
2/015	• • • characterised by the jet generation process (B41J 2/215 takes precedence)	control circuit}
2/02	• • • • generating a continuous ink jet	2/0455 {Details of switching sections of circuit, e.g. transistors}
2002/022	• • • • {Control methods or devices for	2/04551 { using several operating modes}
	continuous ink jet}	2/04553 {detecting ambient temperature}
2/025	• • • • by vibration	2/04555 {detecting current}
2/03	by pressure	2/04556 {detecting distance to paper}
2002/031	• • • • • {Gas flow deflection}	2/04558 {detecting presence or properties of a
2002/032	{Deflection by heater around the nozzle}	dot on paper} 2/0456 {detecting drop size, volume or
2002/033	• • • • • {Continuous stream with droplets of	weight}
2/025	different sizes}	2/04561 (detecting presence or properties of a
2/035	by electric or magnetic field	drop in flight}
2/04	enerating single droplets or particles on demand	2/04563 {detecting head temperature; Ink temperature}
2002/041	• • • • {Electromagnetic transducer}	2/04565 {detecting heater resistance}
2002/043	• • • • {Electrostatic transducer}	2/04566 {detecting humidity}
2/045	• • • • by pressure, e.g. electromechanical transducers	2/04568 {Control according to number of actuators used simultaneously}
2/04501	• • • • (Control methods or devices therefor, e.g. driver circuits, control circuits)	2/0457 {Power supply level being detected or varied}
2/04503	{aiming at compensating carriage	2/04571 {detecting viscosity}
	speed}	2/04573 {Timing; Delays}

2/04575		2/125
	{controlling heads of acoustic type}	2/125 Sensors, e.g. deflection sensors {(nozzle clogging detection for cleaning reasons
2/045/6	{controlling heads of electrostatic	B41J 2/16579; detection for compensation
2/04578	type}{controlling heads based on	for failed nozzles <u>B41J 2/2139</u>)}
2/04376	electrostatically-actuated membranes	2/13 for inclination of printed pattern
2/0458	• • • • • • {controlling heads based on heating	2/135 Nozzles
