F16F SPRINGS; SHOCK-ABSORBERS; MEANS FOR DAMPING VIBRATION

NOTES

- 1. This subclass covers:
 - springs, shock-absorbers or vibration-dampers;
 - · their arrangement in, or adaptation for, particular apparatus if not provided for in the subclasses covering said apparatus.
- 2. This subclass <u>does not cover</u> inventions concerning the arrangement or adaptation of springs, shock-absorbers or vibration-dampers in, or for, particular apparatus, if provided for in the subclasses concerning the said apparatus, e.g.

		pparatus, if provided for in the subclasses concerning the said apparatus, e.g.
	<u>A47C 23/00</u> - <u>A47C 27/00</u>	Spring mattresses
	{ <u>A61F 2/00</u> }	{Prostheses}
	A63C 5/075	Vibration dampers in skis
	<u>B60G</u>	Vehicle suspensions
	B60R 19/24	Mounting of bumpers on vehicles
	<u>B61F</u>	Rail vehicle suspensions
	B61G 11/00	Buffers for railway or tramway vehicles
	B62D 21/15	Vehicle chassis frames having impact absorbing means
	B62J 1/02	Resiliently mounted saddles on cycles
	B62K 21/08	Steering dampers
	B63H 21/30	Anti-vibration mounting of marine propulsion plant in ships
	B64C 25/58	Arrangement of shock-absorbers or springs in aeroplane alighting gear
	B65D 81/02	Containers, packing elements or packages with shock-absorbing means
	D06F 37/20	Resilient mountings in washing machines
	D06F 49/06	Resilient mountings in domestic spin-dryers
	{ <u>E04B 1/98</u> }	{Protection of buildings against vibrations or shocks}
	E05D 7/086	Braking devices structurally combined with hinges
	F03G 1/00	Spring motors
	{ <u>F16L 3/20</u> }	{Pipe or cable supports}
	F21V 15/04	Resilient mounting of lighting devices
	F41A 25/00	Gun cradles to permit recoil
	F41B 5/1426	Vibration dampers for archery bows
	G01D 11/00	Indicating or recording in connection with measuring
	G01G 21/10	Weighing apparatus, e.g. arrangement of shock-absorbers in weighing apparatus
	<u>G04B</u>	Clocks, watches
	G12B 3/08	Damping of movements in instruments
	G21C 7/20	Disposition of shock-absorbing devices for displaceable control elements in nuclear reactors
	{ <u>H02G 7/14</u> }	{Arrangements or devices for damping mechanical oscillations of power lines}
3.	Mention of "steel" or "metal" i	in groups F16F, unless specific mention is made otherwise, should be seen in the light of the

- Mention of "steel" or "metal" in groups <u>F16F</u>, unless specific mention is made otherwise, should be seen in the light of the title of group <u>F16F 1/00</u>, i.e. material having low internal friction. This normally includes composite materials such as fibrereinforced plastics.
- 4. Mention of "rubber" or "plastics" in group F16F, unless specific mention is made otherwise, should be seen in the light of the title of group F16F 1/36, i.e. material having high internal friction. This normally does NOT include composite materials such as fibre-reinforced plastics except in the case of groups F16F 1/366 F16F 1/3686 and F16F 15/305.

WARNINGS

1. The following IPC groups are not in the CPC scheme. The subject matter for these IPC groups is classified in the following CPC groups:

F16F 3/07	covered by	<u>F16F 13/00</u>
F16F 9/24	covered by	F16F 9/22
F16F 9/40	covered by	<u>F16F 9/00</u> - <u>F16F 9/50</u>
F16F 9/508	covered by	F16F 9/512
F16F 11/00	covered by	F16F 7/00, F16F 9/00, F16F 15/00
F16F 13/12	covered by	F16F 13/08

F16F (continued)

2. In this subclass non-limiting references (in the sense of paragraph 39 of the Guide to the IPC) may still be displayed in the scheme.

1/00	Springs (working with fluid <u>F16F 5/00</u> , <u>F16F 9/00</u>)	1/126	• • • {comprising an element between the end
1/02	 made of steel or other material having low internal 		coil of the spring and the support proper,
	friction {(characterised by their special construction		e.g. an elastomeric annulus (F16F 1/13 takes
	from fibre-reinforced plastics F16F 1/366; spring		precedence)}
	units consisting of several springs F16F 3/02;	1/127	• • • {allowing rotation about axis of spring}
	making springs from wire <u>B21F 35/00</u>); Wound,	1/128	• • • { with motion-limiting means, e.g. with
	torsion, leaf, cup, ring or the like springs, the		a full-length guide element or ball joint
	material of the spring not being relevant		connections; with protective outer cover
1/021	• • {characterised by their composition, e.g.		(<u>F16F 1/121</u> takes precedence)}
1/021	comprising materials providing for particular	1/13	• • • comprising inserts and spacers between
	spring properties (composition and manufacture	1/13	the windings for changing the mechanical
	of clock or watch springs G04B 1/145)}		
1/000			or physical characteristics of the spring
1/022	• • • {made of ceramic materials}	1/1/	$\{(\underline{F16F 1/122} \text{ takes precedence})\}$
1/024	• • {Covers or coatings therefor ($\underline{F16F 1/24}$ takes	1/14	• Torsion springs consisting of bars or tubes
	precedence)}	1/145	• • • { with means for modifying the spring
1/025	 {characterised by having a particular shape 		characteristics (fluid regulation of torsion
	(<u>F16F 1/04</u> , <u>F16F 1/14</u> , <u>F16F 1/18</u> , <u>F16F 1/32</u> ,		spring characteristics in vehicle suspensions
	<u>F16F 1/34</u> take precedence)}		<u>B60G 17/0277</u>)}
1/027	• • {Planar, e.g. in sheet form; leaf springs}	1/16	• • Attachments or mountings {(F16F 1/145)
1/028	• • {cylindrical, with radial openings}		takes precedence; mounting means for vehicle
1/04	Wound springs {(making springs by coiling wire}		stabiliser bars <u>B60G 21/0551</u>)}
1/04	B21F 3/00)}	1/18	Leaf springs {(planar springs in general
1/0/11	• • { with means for modifying the spring	1/10	F16F 1/027; "Belleville"-type springs with
1/041			generally radial arms F16F 1/324)}
	characteristics (<u>F16F 1/12</u> , <u>F16F 3/06</u>	1/182	• • { with inter-engaging portions between leaves
	take precedence; fluid regulation of coil	1/102	
	spring characteristics in vehicle suspensions		or between leaves and mountings, e.g. ridges,
	<u>B60G 17/0272</u>)}	1/105	notches, ripples}
1/042	• • {characterised by the cross-section of the wire}	1/185	• • • {characterised by shape or design of individual
1/043	• • • { the cross-section varying with the wire		leaves (<u>F16F 1/22</u> takes precedence)}
	length}	1/187	• • • { shaped into an open profile, i.e. C- or U-
1/045	{Canted-coil springs}		shaped}
1/046	• • • {with partial nesting of inner and outer coils	1/20	with layers, e.g. anti-friction layers, or with
	(F16F 3/04 takes precedence)}		rollers between the leaves
1/047	• • • {characterised by varying pitch}	1/22	with means for modifying the spring
1/048	• • {with undulations, e.g. wavy springs}		characteristic {(fluid regulation of leaf
1/06			spring characteristics in vehicle suspensions
	with turns lying in cylindrical surfaces		B60G 17/0275)}
1/065	• • • • {characterised by loading of the coils	1/24	Lubrication; Covers, e.g. for retaining lubricant
	in a radial direction (canted-coil springs	1/26	Attachments or mountings ({F16F 1/182,
	<u>F16F 1/045</u>)}	1/20	F16F 1/22 \\ B60G 11/10 \take precedence)
1/08	• • • with turns lying in mainly conical surfaces	1/20	• • • comprising cylindrical metal pins pivoted in
	{, i.e. characterised by varying diameter	1/28	
	$(\underline{F16F 1/10} \text{ takes precedence})$	4 /0.0	close-fitting sleeves
1/10	Spiral springs with turns lying substantially	1/30	comprising intermediate pieces made of
	in plane surfaces {(F16F 1/326 takes		rubber or similar elastic material
	precedence)}	1/32	• • Belleville-type springs (friction-clutch diaphragm
1/12	• • Attachments or mountings {(F16F 1/041,		springs <u>F16D 13/583</u>)
	F16F 13/02 take precedence; of combinations	1/322	• • {Snap-action springs}
	of vibration damper and mechanical spring for	1/324	{characterised by having tongues or arms
	vehicle suspension units <u>B60G 15/02</u>)}		directed in a generally radial direction, i.e.
1/121	• • • • {adjustable, e.g. to modify spring		diaphragm-type springs}
1/121	characteristics}	1/326	• • • { with a spiral-like appearance }
1/100	· · · · · · · · · · · · · · · · · · ·	1/328	• • • {with a spiral line appearance; • • • {with undulations, e.g. wavy springs}
1/122	• • • { where coils, e.g. end coils, of the spring are		
1/100	rigidly clamped or similarly fixed}	1/34	. Ring springs, i.e. annular bodies deformed
1/123	• • • {characterised by the ends of the spring	4 /2 -	radially due to axial load
	being specially adapted, e.g. to form an	1/36	• made of rubber or other material having high
	eye for engagement with a radial insert		internal friction, {e.g. thermoplastic elastomers
	(<u>F16F 1/122</u> , <u>F16F 1/125</u> take precedence)		(spring units consisting of several springs
1/125	• • • { where the end coils of the spring engage an		<u>F16F 3/08</u>)}
	axial insert (<u>F16F 1/126</u> , <u>F16F 1/128</u> take		
	precedence)}		

1/3605	• • {characterised by their material (F16F 1/362, F16F 1/364, F16F 1/366, F16F 1/37 take precedence; composition of macromolecular compounds in general C08L)}	1/38	• • with a sleeve of elastic material between a rigid outer sleeve and a rigid inner sleeve or pin {, i.e. bushing-type (hydraulically-damped bushes F16F 13/14; suppression of vibrations in
1/361	• • • {comprising magneto-rheological elastomers [MR], (magneto-rheological fluid dampers F16F 9/535)}		rotating systems by making use of elastomeric spring members between rotating elements, driveline torque being transmitted therebetween
1/3615	• • {with means for modifying the spring characteristic (F16F 1/371 takes precedence)}		F16F 15/126, by making use of a dynamic damping mass attached to a rotating element by
1/362	made of steel wool, compressed hair, {woven or non-woven textile, or like materials}		means of elastomeric springs <u>F16F 15/14</u> ; pivots <u>per se F16C 11/00</u> ; elastic or yielding bearings
1/364	made of cork, wood or like material		or bearing supports <u>F16C 27/00</u> ; parts of sliding-
1/366		1/3807	contact bearings, e.g. bushes <u>F16C 33/04</u>)} {characterised by adaptations for particular
	characterised by their special construction from such materials}		modes of stressing}
	NOTE	1/3814	• • • {characterised by adaptations to counter axial forces (F16F 1/393 takes precedence)}
	Attention is drawn to notes following the	1/3821	 {characterised by adaptations to counter torsional forces}
	subclass title regarding interpretation of the term "plastics" in groups <u>F16F</u> , in particular	1/3828	• • {End stop features or buffering (F16F 1/3807
	as regards the subject matter of groups	1/3020	takes precedence)}
	<u>F16F 1/366</u> - <u>F16F 1/3686</u> .	1/3835	{characterised by the sleeve of elastic material,
1/3665	• • • {Wound springs}		e.g. having indentations or made of materials of
1/368	Leaf springs		different hardness (F16F 1/3807, F16F 1/387 take precedence)}
1/3683	• • • {Attachments or mountings therefor}	1/3842	• • {Method of assembly, production or treatment;
1/3686	{End mountings}	1/3042	Mounting thereof (supports for pipes, cables or
1/37	• • of foam-like material {, i.e. microcellular		protective tubing <u>F16L 3/00</u>)}
	material}, e.g. sponge rubber {(padded linings for vehicle interiors <u>B60R 21/04</u>)}	1/3849	• • • • {Mounting brackets therefor, e.g. stamped steel brackets; Restraining links}
1/371	• characterised by inserts or auxiliary extension {or exterior} elements, e.g. for rigidification	1/3856	• • • • {Vulcanisation or gluing of interface between rigid and elastic sleeves}
	(<u>F16F 1/387</u> takes precedence; {non-embedded reinforcing elements for flexibly-walled air	1/3863	• • • {characterised by the rigid sleeves or pin, e.g. of non-circular cross-section (F16F 1/3807,
1/3713	springs <u>F16F 9/0436</u> }) • • { with external elements passively influencing	1/207	F16F 1/387 take precedence)
1/3716	spring stiffness, e.g. rings or hoops} {External elements such as covers or	1/387	in particular directions {(spherical or conical
1/3/10	envelopes, that are flexible}	1/3873	sleeves F16F 1/393)} {having holes or openings}
1/373	characterised by having a particular shape	1/3876	{by means of inserts of more rigid material}
	$\{(F16F9/58 \text{ takes precedence})\}$	1/393	with spherical or conical sleeves
1/3732	• • • {having an annular or the like shape, e.g.	1/3935	{Conical sleeves}
1/2727	grommet-type resilient mountings}	1/40	consisting of a stack of similar elements separated
1/3735	{Multi-part grommet-type resilient mountings}		by non-elastic intermediate layers {(F16F 9/306 takes precedence; laminated constructions to
1/3737	• • • {Planar, e.g. in sheet form (vibration dampers comprising one or more constrained		protect buildings against abnormal external influences, e.g. earthquakes, <u>E04H 9/022</u>)}
1/07/	viscoelastic layers F16F 9/306)}	1/403	• • • {characterised by the shape of the non-elastic
1/374 1/376	having a spherical or the like shapehaving projections, studs, serrations or the		interengaging parts between the elements}
1/3/0	like on at least one surface ({F16F 1/3835}, F16F 1/387 take precedence)	1/406	• • { characterised by the shape of the elastic elements}
1/377	 having holes or openings ({F16F 1/37}), F16F 1/387 take precedence) 	1/41	 the spring consisting of generally conically arranged elements {(if sleeve-like, i.e. a surface of revolution F16F 1/3935)}
1/379	• characterised by arrangements for controlling the	1/42	characterised by the mode of stressing
	spring temperature, e.g. by cooling		NOTE
			Classification of documents in groups
			F16F 1/42 - F16F 1/54, concerning the mode of stressing of elastomeric springs, is to be considered only when classification in other

indexing codes under F16F 2236/00.

considered only when classification in other subgroups of $\underline{F16F1/36}$ would be unsuitable. Attention is drawn to the parallel scheme of

3

1/422	• • • {the stressing resulting in flexion of the spring}	6/005	• {using permanent magnets only}
1/424	• • • { of membrane-type springs }		
1/426	• • • {Radial flexion of ring-type springs}	7/00	Vibration-dampers; Shock-absorbers (using fluid
1/428	• • • {of strip- or leg-type springs}		F16F 5/00, F16F 9/00; specific for rotary systems
1/44	loaded mainly in compression	7/003	F16F 15/10 {; belt tensioners F16H 7/12}) • {One-shot shock absorbers (using plastic
1/445	• • • {the spring material being contained in a	7/003	deformation of members, e.g. using sacrificial,
	generally closed space (F16F 1/393 takes		fibre-reinforced composite members F16F 7/12)}
	precedence)}	7/006	• • {using textile means (safety belts or body
1/46	loaded mainly in tension		harnesses incorporating energy absorbing means
1/48	loaded mainly in torsion		<u>A62B 35/04</u>)}
1/50	loaded mainly in shear	7/01	 using friction between loose particles, e.g. sand
1/505	{Rotational shear}	7/015	• • {the particles being spherical, cylindrical or the
1/52 1/54	loaded in combined stresses	= 10.5	like}
1/545	 loaded in compression and shear {Neidhart-type rubber springs (vehicle	7/02	with relatively-rotatable friction surfaces that are
1/343	suspensions having Neidhart-type rubber		pressed together ($\underline{F16F7/01}$ takes precedence; one of the members being a spring $\underline{F16F13/02}$ {;
	springs <u>B60G 11/225</u>)}		friction devices between relatively-movable parts
2100			of a hinge <u>E05D 11/08</u> ; braking devices for wings
3/00	Spring units consisting of several springs, e.g. for obtaining a desired spring characteristic		E05F 5/00})
	({F16F 1/32, F16F 1/34, F16F 7/14 take	7/023	• • {and characterised by damping force adjustment
	precedence }; if including fluid springs F16F 5/00,		means}
	F16F 13/00)	7/026	• • • {resulting in the damping effects being
	NOTE	7/04	different according to direction of rotation} in the direction of the axis of rotation
		7/04	{(F16F 7/023 takes precedence)}
	In this group, vehicle leaf spring units, i.e. "packets" of individual leaves, are considered as a	7/06	• in a direction perpendicular or inclined to the axis
	single spring		of rotation {(F16F 7/023 takes precedence)}
		7/065	• • • {where elements interengaging frictionally are
3/02	with springs made of steel or of other material		in the shape of spiral bands}
2/022	having low internal friction	7/08	 with friction surfaces rectilinearly movable along
3/023 3/026	• • {composed only of leaf springs}		each other (<u>F16F 7/01</u> takes precedence {; one of
3/020	• {to give a zero-spring rate characteristic}• composed only of wound springs	7/082	the members being a spring <u>F16F 13/02</u> }) • {and characterised by damping force adjustment
3/04	 composed only of would springs of which some are placed around others in such 	1/062	means}
2,00	a way that they damp each other by mutual	7/085	• • • {resulting in the damping effects being
	friction		different according to direction of movement}
3/08	• with springs made of a material having high internal	7/087	• • {Elastomeric surface effect dampers}
	friction, e.g. rubber {(multi-part grommet-type	7/09	in dampers of the cylinder-and-piston type
2/007	resilient mountings <u>F16F 1/3735</u>)}	7/095	{frictional elements brought into engagement
3/087	 Units comprising several springs made of plastics or the like material (F16F 1/40, {F16F 1/545}) 		by movement along a surface oblique to the
	take precedence)		axis of the cylinder, e.g. interaction of wedge- shaped elements}
3/0873	• • • {of the same material or the material not being	7/10	using inertia effect (F16F 13/108, F16F 13/22,
	specified}	7710	F16F 15/10, F16F 15/22 take precedence; stabilising

2230/10	• Enclosure elements, e.g. for protection
2230/105	Flexible, e.g. bellows or bladder
2230/12	• Gas generation, e.g. by mixing of chemicals
2230/14	Ball joints; Spherical support elements
2230/16	used in a strut, basically rigid
2230/18	Control arrangements
2230/18	fluid actuated
2230/186	with manual adjustments
2230/180	Location of equilibration chamber
	•
2230/22	Pumps
2230/24	• Detecting or preventing malfunction, e.g. fail safe
2230/26	• Air gap
2230/28	Inclination of a suspension element
2230/30	. Sealing arrangements
2230/32	Modular design
2230/34	. Flexural hinges
2230/36	. Holes, slots or the like
2230/38	Off-centre positioning
2230/40	. Multi-layer
2230/42	Multiple pistons
2230/46	. Maintenance
2230/48	. Thermal insulation
2232/00	Nature of movement
2232/02	Rotary
2232/04	Rotary-to-translation conversion
2232/06	Translation-to-rotary conversion
2232/08	. Linear
2234/00	Shape
2234/02	. cylindrical
2234/04	• conical
2234/06	. plane or flat
2234/08	• spherical
	•
2236/00	Mode of stressing of basic spring or damper
2226/02	elements or devices incorporating such elements
2236/02	• the stressing resulting in flexion of the spring
2236/022	• • of membrane-type springs
2236/025	radial flexion of ring-type springs
2236/027	of strip- or leg-type springs
2236/04	. Compression
2236/045	the spring material being generally enclosed
2236/06	. Tension
2236/08	. Torsion
2236/085	the spring being annular
2236/10	. Shear
2236/103	linear
2236/106	• • rotational
2236/12	 loaded in combined stresses
2236/123	loaded in compression and shear
2236/126	Neidhart-type rubber springs
2238/00	Type of enringe or domners
2238/02	Type of springs or dampers
2238/022	Springsleaf-like, e.g. of thin, planar-like metal
	-
2238/024	torsional wound- or coil-like
2238/026	
2238/028	Winding direction thereof
2238/04	. Damper
2229/045	I and shoor damper

2238/045 . . Lead shear damper
