G PHYSICS

(NOTES omitted)

INSTRUMENTS

G01 MEASURING; TESTING

(NOTES omitted)

G01L MEASURING FORCE, STRESS, TORQUE, WORK, MECHANICAL POWER, MECHANICAL EFFICIENCY, OR FLUID PRESSURE (weighing G01G)

NOTE

Attention is drawn to the Notes following the title of class G01.

WARNING

In this subclass non-limiting references (in the sense of paragraph 39 of the Guide to the IPC) may still be displayed in the scheme.

1/00	Measuring force or stress, in general (measuring	1/162	• • {using piezoelectric resonators}
1/005	force due to impact G01L 5/00)	1/165	• • • {with acoustic surface waves}
1/005	• {by electrical means and not provided for in G01L 1/06 - G01L 1/22}	1/167 1/18	 {optical excitation or measuring of vibrations}. using properties of piezo-resistive materials, i.e.
1/02	 by hydraulic or pneumatic means 	1/10	materials of which the ohmic resistance varies
1/04	 by hydraune of phedmatic means by measuring elastic deformation of gauges, e.g. of 		according to changes in magnitude or direction of
1/04	springs		force applied to the material
1/042	• • {of helical springs}	1/183	• • {by measuring variations of frequency of
1/044	• • {of leaf springs}		vibrating piezo-resistive material}
1/046	• • {of spiral springs}	1/186	• • • {optical excitation or measuring of vibrations}
1/048	• • {of torsionally deformable elements}	1/20	 by measuring variations in ohmic resistance of solid
1/06	 by measuring the permanent deformation of gauges, 		materials or of electrically-conductive fluids (of
	e.g. of compressed bodies		piezo-resistive materials <u>G01L 1/18</u>); by making use
1/08	 by the use of counterbalancing forces 		of electrokinetic cells, i.e. liquid-containing cells wherein an electrical potential is produced or varied
1/083	• • (using hydraulic or pneumatic counterbalancing		upon the application of stress
1/00/	forces}	1/205	• • {using distributed sensing elements}
1/086	 {using electrostatic or electromagnetic counterbalancing forces} 	1/22	using resistance strain gauges
1/10	 by measuring variations of frequency of stressed 	1/2206	• • {Special supports with preselected places to
1/10	vibrating elements, e.g. of stressed strings (using		mount the resistance strain gauges; Mounting
	resistance strain gauges <u>G01L 1/22</u>)		of supports}
1/103	• • {optical excitation or measuring of vibrations}	1/2212	• • • {particularly adapted to unbounded-wire-
1/106	• • {Constructional details}		type strain gauges}
1/12	 by measuring variations in the magnetic properties 	1/2218	• • • • {the supports being of the column type, e.g.
	of materials resulting from the application of stress		cylindric, adapted for measuring a force
1/122	• • {by using permanent magnets}	1/0005	along a single direction}
1/125	• • {by using magnetostrictive means	1/2225	• • • • {the direction being perpendicular to the central axis}
	(magnetostrictive sensors <u>H10N 35/101</u>)}	1/2231	• • • { the supports being disc- or ring-shaped,
1/127	• • (by using inductive means (G01L 1/122,	1/2231	adapted for measuring a force along a single
1/14	G01L 1/125 take precedence)}		direction}
1/14	 by measuring variations in capacitance or inductance of electrical elements, e.g. by measuring 	1/2237	• • • • {the direction being perpendicular to the
	variations of frequency of electrical oscillators		central axis}
1/142	• . {using capacitors}	1/2243	• • • {the supports being parallelogram-shaped}
1/144	• • (using capacitors) • • • (with associated circuitry (G01L 1/146 and	1/225	• • • {Measuring circuits therefor}
1/1	G01L 1/148 take precedence)	1/2256	• • • {involving digital counting}
1/146	• • • {for measuring force distributions, e.g. using	1/2262	• • • {involving simple electrical bridges}
	force arrays (G01L 1/148 takes precedence)}	1/2268	• • • {Arrangements for correcting or for
1/148	• • {using semiconductive material, e.g. silicon}		compensating unwanted effects}
1/16	 using properties of piezoelectric devices 	1/2275	{for non linearity}
	_		

1/2201	(for tommoreture verictions)	2/1/25	(involving magnetic or alcotromagnetic
1/2281 1/2287	 {for temperature variations} {constructional details of the strain gauges	3/1435	{involving magnetic or electromagnetic means}
1/220/	(adjustable resistors H01C 10/00)}	3/1442	• • • • {involving electrostatic means}
1/2293	• • • { of the semi-conductor type (semi-conductor	3/1442	• • • • {involving electrostatic means}
1/2293	devices controllable by variations of applied	3/1457	{involving potentionneure means} {involving resistance strain gauges}
	mechanical force H01L 29/84)}		
1/24	 by measuring variations of optical properties of 	3/1464	{involving screws and nuts, screw-gears or
1/24	material when it is stressed, e.g. by photoelastic	2/1471	cams}
	stress analysis {using infrared, visible light,	3/1471	• • • {using planet wheels or conical gears}
	ultraviolet}	3/1478	· · · {involving hinged levers}
1/241	• • {by photoelastic stress analysis}	3/1485	· · · {involving fluidic means}
1/242	• {the material being an optical fibre}	3/1492	{involving electric couplings}
1/243	• • {using means for applying force perpendicular	3/16	• Rotary-absorption dynamometers, e.g. of brake type
1/2 13	to the fibre axis}	3/18	mechanically actuated
1/245	• • • • {using microbending}	3/20	fluid actuated
1/246	• • • {using integrated gratings, e.g. Bragg gratings}	3/205	• • · { of the air brake type}
1/247	 (using distributed sensing elements, e.g. 	3/22	electrically or magnetically actuated
1/2-1/	microcapsules (along a single optical fibre	3/24	• Devices for determining the value of power, e.g.
	G01L 1/242)}		by measuring and simultaneously multiplying the
1/248	• • {using infrared (<u>G01L 1/241</u> , <u>G01L 1/242</u> take		values of torque and revolutions per unit of time,
1,2.0	precedence)}		by multiplying the values of tractive or propulsive
1/25	• using wave or particle radiation, e.g. X-rays	2/2.42	force and velocity
1,23	{, microwaves}, neutrons (G01L 1/24 takes	3/242	• • {by measuring and simultaneously multiplying
	precedence)	2/245	torque and velocity}
1/255	• • {using acoustic waves, or acoustic emission	3/245	• • {by measuring and simultaneously multiplying
	(<u>G01L 1/10</u> and <u>G01L 1/16</u> take precedence)}	2/2.45	pressure and velocity}
1/26	Auxiliary measures taken, or devices used, in	3/247	• • {by measuring and simultaneously multiplying
	connection with the measurement of force, e.g. for	2/26	tractive or propulsive force and velocity}
	preventing influence of transverse components of	3/26	• Devices for measuring efficiency, i.e. the ratio of
	force, for preventing overload		power output to power input
3/00	Measuring torque, work, mechanical power, or	5/00	Apparatus for, or methods of, measuring force,
3/00	Measuring torque, work, inechanical bower, or		
			work, mechanical power, or torque, specially
3/02	mechanical efficiency, in general		adapted for specific purposes
3/02	mechanical efficiency, in general Rotary-transmission dynamometers	5/0004	adapted for specific purposes. {Force transducers adapted for mounting in a bore
3/02 3/04	mechanical efficiency, in generalRotary-transmission dynamometerswherein the torque-transmitting element	5/0004	 adapted for specific purposes {Force transducers adapted for mounting in a bore of the force receiving structure (G01L 5/0009 takes
3/04	 mechanical efficiency, in general Rotary-transmission dynamometers wherein the torque-transmitting element comprises a torsionally-flexible shaft 		 adapted for specific purposes {Force transducers adapted for mounting in a bore of the force receiving structure (G01L 5/0009 takes precedence)}
	 mechanical efficiency, in general Rotary-transmission dynamometers wherein the torque-transmitting element comprises a torsionally-flexible shaft \(\){ by measuring variations of frequency of } 	5/0004 5/0009	 adapted for specific purposes {Force transducers adapted for mounting in a bore of the force receiving structure (G01L 5/0009 takes precedence)} {Force sensors associated with a bearing (testing of
3/04 3/045	 mechanical efficiency, in general Rotary-transmission dynamometers wherein the torque-transmitting element comprises a torsionally-flexible shaft {by measuring variations of frequency of stressed vibrating elements} 	5/0009	 adapted for specific purposes {Force transducers adapted for mounting in a bore of the force receiving structure (G01L 5/0009 takes precedence)} {Force sensors associated with a bearing (testing of bearings G01M 13/04)}
3/04 3/045 3/06	 mechanical efficiency, in general Rotary-transmission dynamometers wherein the torque-transmitting element comprises a torsionally-flexible shaft {by measuring variations of frequency of stressed vibrating elements} involving mechanical means for indicating 	5/0009 5/0014	 adapted for specific purposes {Force transducers adapted for mounting in a bore of the force receiving structure (G01L 5/0009 takes precedence)} {Force sensors associated with a bearing (testing of bearings G01M 13/04)} . {by using capacitive sensors}
