### NOTES

1. This subclass covers:
   - ac or dc mains or distribution networks;
   - circuit arrangements for battery supplies, including charging or control thereof, or coordinated supply from two or more sources of any kind;
   - circuit arrangements or systems for wireless supply or distribution of electric power.

2. This subclass does not cover:
   - control of a single motor, generator or dynamo-electric converter, of the types covered by subclass H01F or H02K, which is covered by subclass H02P;
   - control of a single motor or generator, of the types covered by subclass H02N, which is covered by that subclass.

**WARNING**

In this subclass non-limiting references (in the sense of paragraph 39 of the Guide to the IPC) may still be displayed in the scheme.

| 3/005 | . (Arrangements for selectively connecting the load to one among a plurality of power lines or power sources (for providing uninterruptable power supply H02J 9/00)) |
| 3/006 | . . ([for providing alternative feeding paths between load and source when the main path fails, e.g. transformers, busbars]) |
| 2003/007 | . . (Simulating, e.g. planning, reliability check, modeling) |
| 3/008 | . . ([involving trading of energy or energy transmission rights]) |
| 3/01 | . Arrangements for reducing harmonics or ripples |
| 3/02 | . . (using a single network for simultaneous distribution of power at different frequencies; using a single network for simultaneous distribution of ac power and of dc power) |
| 3/04 | . . (for connecting networks of the same frequency but supplied from different sources) |
| 3/06 | . . . (Controlling transfer of power between connected networks; Controlling sharing of load between connected networks) |
| 3/08 | . . (Synchronising of networks) |
| 3/10 | . . Constant-current supply systems |
| 3/12 | . . (for adjusting voltage in ac networks by changing a characteristic of the network load) |
| 3/14 | . . . (by switching loads on to, or off from, network, e.g. progressively balanced loading) |
| 2003/143 | . . . ([Household appliances management]) |
| 2003/146 | . . . ([Tariff based load management]) |
| 3/16 | . . . (by adjustment of reactive power) |
| 3/18 | . . Arrangements for adjusting, eliminating or compensating reactive power in networks (for adjustment of voltage H02J 3/16) |
| 3/1807 | . . . ([using series compensators]) |
Arrangements for transfer of electric power between networks of substantially different frequency

Arrangements for transfer of electric power between asymmetry in polyphase networks

Oscillations of power in networks (by control)

Synchronising a generator for connection to a network or to another generator

Synchronising a generator for connection to a supply from the network

{ Dispersed generators

{ Reducing harmonics or oscillations in HVDC

{ with inductive power transfer (for charging

Circuit arrangements for mains or distribution networks not specified as ac or dc

Circuit arrangements for transfer of electric power between ac networks and dc networks (H02J 3/36 takes precedence)

WARNING

Group H02J 5/00 is impacted by reclassification into groups H02J 50/00 – H02J 50/90.

Groups H02J 5/00 and H02J 50/00 – H02J 50/90 should be considered in order to perform a complete search.

Circuit arrangements for charging or depolarising batteries or for supplying loads from batteries

2007/0001

[Authentication, i.e. circuits for checking compatibility between one component, e.g. a battery or a battery charger, and another component, e.g. a power source]

{ Management of charging with batteries

{ with automatic parallel connection when synchronisation is achieved

{ with means for ensuring correct phase sequence

{ Controlling of the sharing of output between the generators, converters, or transformers

{ Controlling the sharing of the in-phase component

{ Controlling the sharing of the out-of-phase component

4/00

Circuit arrangements for mains or distribution networks not specified as ac or dc

5/00

Circuit arrangements for transfer of electric power between ac networks and dc networks (H02J 3/36 takes precedence)

WARNING

Group H02J 5/00 is impacted by reclassification into groups H02J 50/00 – H02J 50/90.

Groups H02J 5/00 and H02J 50/00 – H02J 50/90 should be considered in order to perform a complete search.

7/00

Circuit arrangements for charging or depolarising batteries or for supplying loads from batteries

2007/0001

[Authentication, i.e. circuits for checking compatibility between one component, e.g. a battery or a battery charger, and another component, e.g. a power source]

{ Management of charging with batteries

{ with automatic parallel connection when synchronisation is achieved

{ with means for ensuring correct phase sequence

{ Controlling of the sharing of output between the generators, converters, or transformers

{ Controlling the sharing of the in-phase component

{ Controlling the sharing of the out-of-phase component

4/00

Circuit arrangements for mains or distribution networks not specified as ac or dc

5/00

Circuit arrangements for transfer of electric power between ac networks and dc networks (H02J 3/36 takes precedence)

WARNING

Group H02J 5/00 is impacted by reclassification into groups H02J 50/00 – H02J 50/90.

Groups H02J 5/00 and H02J 50/00 – H02J 50/90 should be considered in order to perform a complete search.
H02J

7/0024  . . . [Parallel/serial switching of connection of batteries to charge or load circuit]
7/0026  . . . [using safety or protection circuits, e.g. overcharge/discharge disconnection]
7/0027  . . . [Stations for charging mobile units, e.g. of electric vehicles, of mobile telephones (H02J 7/0021, H02J 7/0026 takes precedence)]
7/0029  . . . [with safety devices (H02J 7/0026 takes precedence)]
7/0031  . . . [using battery or load disconnect circuits (H02J 9/0022 takes precedence)]
7/0032  . . . [disconnection of loads if battery is not under charge, e.g. in vehicle if engine is not running]
7/0034  . . . [using reverse polarity correcting or protecting circuits (mechanical means of polarity protection H02J 7/0045)]
7/0036  . . . [using connection detecting circuits (H02J 7/0034 takes precedence)]
2007/0037  . . . [Overcharge protection]
2007/0039  . . . [Overcurrent protection]
2007/004  . . . [Overdischarge protection]
7/0042  . . . [characterised by the mechanical construction (H02J 7/355 takes precedence)]
7/0044  . . . [specially adapted for holding portable devices containing batteries (H02J 7/0045 takes precedence)]
7/0045  . . . [concerning the insertion or the connection of the batteries (charging from ac mains using non-contact coupling H02J 7/0025)]
7/0047  . . . [with indicating devices (H02J 7/0021 takes precedence)]
2007/0049  . . . [Detection of fully charged condition]
2007/005  . . . [Detection of remaining charge capacity]
7/0052  . . . [Charge circuits only (H02J 7/0003, H02J 7/0013, H02J 7/0007 takes precedence)]
7/0054  . . . [Battery to battery charging (with circuits for polarity protection H02J 7/0034)]
7/0055  . . . [adapted for charging from various sources, e.g. AC, DC, multivoltage]
7/0057  . . . [adapted for charge maintenance or battery rejuvenation (H02J 7/0075 takes precedence)]
2007/0059  . . . [characterised by the converter]
2007/006  . . . [Charge provided using dc bus or data bus of a computer]
2007/0062  . . . [Charge provided using dc bus or data bus of a computer]
7/0063  . . . [Circuits adapted for supplying loads only]
7/0065  . . . [using converters specially adapted for use with a battery]
2007/0067  . . . [Discharge management, i.e. discharge current reduction at low state of charge, sequential battery discharge in systems with a plurality of battery]
7/0068  . . . [Battery or charger load switching, e.g. concurrent charging and load supply (H02J 7/0013 takes precedence)]
7/007  . . . [Regulation of charging current or voltage]
7/0072  . . . [using semiconductor devices only]
7/0073  . . . [with a programmable charge schedule (H02J 7/0093 takes precedence)]
7/0075  . . . [for charge maintenance, battery initiation or rejuvenation]
7/0077  . . . [the charge cycle being terminated in response to electric parameters (H02J 7/0093 takes precedence)]
7/0078  . . . [in response to discharge current, e.g. using a coulometer, pilot cell]
7/008  . . . [with the battery connected to the charge circuit]
7/0081  . . . [and in response to battery voltage gradient]
7/0083  . . . [and in response to charge current gradient]
7/0085  . . . [with the battery disconnected from the charge circuit]
7/0086  . . . [and in response to battery voltage]
7/0088  . . . [the charge cycle being terminated in response to non-electric parameters (H02J 7/0093 takes precedence)]
7/009  . . . [in response to degree of gas development in the battery]
7/0091  . . . [in response to temperature of the battery]
7/0093  . . . [with introduction of pulses during the charging process]
2007/0095  . . . [Control circuit supply, e.g. means for supplying power to the control circuit]
2007/0096  . . . [Charger exchanging data with an electronic device, i.e. telephone, whose internal battery is under charge]
2007/0098  . . . [Smart battery, e.g. battery with means for data exchanging with charger]
7/02  . . . [for charging batteries from ac mains by converters]

WARNING
Group H02J 7/02 is impacted by reclassification into groups H02J 50/00 – H02J 50/90.
Groups H02J 7/02 and H02J 50/00 – H02J 50/90 should be considered in order to perform a complete search.

7/022  . . . [characterised by the type of converter]
7/025  . . . [using non-contact coupling, e.g. inductive, capacitive]

WARNING
Group H02J 7/025 is impacted by reclassification into groups H02J 50/00 – H02J 50/90.
Groups H02J 7/025 and H02J 50/00 – H02J 50/90 should be considered in order to perform a complete search.
Circuit arrangements for emergency or stand-by power supply, e.g. for emergency lighting
9/002 . . . [in which a reserve is maintained in an energy source by disconnecting non-critical loads, e.g. maintaining a reserve of charge in a vehicle battery for starting an engine]
9/005 . . . [using a power saving mode (for copiers G03G 15/5004)]

2009/007 . . . [Detection of the absence of a load]
9/02 . . . in which an auxiliary distribution system and its associated lamps are brought into service
9/04 . . . in which the distribution system is disconnected from the normal source and connected to a standby source

9/06 . . . with automatic change-over
9/061 . . . [characterised by the use of electronic means (H02J 9/062 and H02J 9/065 take precedence)]
9/062 . . . [involving non rotating DC/AC converters]

2009/063 . . . [Common neutral, e.g. ac input neutral line connected to ac output neutral line and dc middle point]
9/065 . . . . . . [for lighting purposes]
9/066 . . . [characterised by the use of dynamo-electric machines (H02J 9/08 takes precedence)]

2009/067 . . . [using multi-primary transformers, e.g. transformer having one primary for each ac energy source and a secondary for the loads]
2009/068 . . . [Electronic means for switching from one power supply to another power supply, e.g. to avoid parallel connection]
9/08 . . . . . . [requiring starting of a prime-mover]

11/00 Circuit arrangements for providing service supply to auxiliaries of stations in which electric power is generated, distributed or converted

13/00 Circuit arrangements for providing remote indication of network conditions, e.g. an instantaneous record of the open or closed condition of each circuitbreaker in the network;
Circuit arrangements for providing remote control of switching means in a power distribution network, e.g. switching in and out of current consumers by using a pulse code signal carried by the network (circuits for indication of single switches H01H 9/167; circuits specially adapted for remote switching of lighting via the power line H05B 37/0263)

13/003 . . . [for DC networks]
13/0006 . . . [for single frequency AC networks]
13/001 . . . [characterised by the display, e.g. of data or controls]
13/0013 . . . [characterised by transmission structure between the control or monitoring unit and the controlled or monitored unit]

13/0017 . . . . [with direct transmission between the control or monitoring unit and the controlled or monitored unit]

13/002 . . . . . [using the power network as support for the transmission]

13/0024 . . . . . [using pulsed signals]

13/0027 . . . . . [Details of signals treatment means]

13/0031 . . . . . [using static semiconductor means]

13/0034 . . . . . . [Transmitters]

13/0037 . . . . . . [Receivers]

13/0041 . . . . . . [using lamps or electromechanical means]

13/0044 . . . . . . [using DC signal superposition]

13/0048 . . . . . . [using modification of a parameter of the network power signal]

13/0051 . . . . . . [Zero-crossing time]

13/0055 . . . . . . [using an auxiliary transmission line]

13/0058 . . . . . . [carrying signals having the network frequency or DC signals]

13/0062 . . . . . . [using a data transmission bus]

13/0065 . . . . . . [using optical means]

13/0068 . . . . . . [using ultrasonic means]

13/0072 . . . . . . [using phone lines]

13/0075 . . . . . . [using radio means]

13/0079 . . . . . . [with transmission using an intermediate treatment level between the control or monitoring unit and the controlled or monitored unit]

13/0082 . . . . . . [using the power network as transmission support]

13/0086 . . . . . . [with transmission using plurality of intermediate treatment level between the control or monitoring unit and the controlled or monitored unit]

13/0089 . . . . . . [using the power network as transmission support]

13/0093 . . . . [for AC networks with plurality frequencies]

13/0096 . . . . [for networks combining AC and DC power]

15/00 Systems for storing electric energy (mechanical systems therefor F01 - F04; in chemical form H01M)

15/003 . . . . [in the form of hydraulic energy]

15/006 . . . . [in the form of pneumatic energy (accumulators for supplying fluid under pressure F15B 1/04)]

17/00 Systems for supplying or distributing electric power by electromagnetic waves

WARNING

Group H02J 17/00 is no longer used for the classification of documents as of February 1, 2016. The content of this group is being reclassified into groups H02J 50/00 - H02J 50/90. Groups H02J 17/00 and H02J 50/00 - H02J 50/90 should be considered in order to perform a complete search.

50/00 Circuit arrangements or systems for wireless supply or distribution of electric power

NOTES

1. In this main group, the specific types of wireless technology used for the power transmission are covered in groups H02J 50/00 - H02J 50/30, while aspects relevant to the circuit arrangements or systems thereof are covered in groups H02J 50/40 - H02J 50/90.

2. In this main group, multi-aspect classification is applied, so that subject matter characterised by aspects covered by more than one of its groups should be classified in each of those groups.

WARNING

Groups H02J 50/00 - H02J 50/90 are incomplete pending reclassification of documents from groups H02J 5/00, H02J 5/005, H02J 7/02 and H02J 17/00.

Groups H02J 5/00, H02J 5/005, H02J 7/02 and H02J 17/00 and H02J 50/00 - H02J 50/90 should be considered in order to perform a complete search.

50/05 . . . using capacitive coupling

50/10 . . . using inductive coupling

50/12 . . . of the resonant type

50/15 . . . using ultrasonic waves

50/20 . . . using microwaves or radio frequency waves

50/23 . . . characterised by the type of transmitting antennas, e.g. directional array antennas or Yagi antennas

50/27 . . . characterised by the type of receiving antennas, e.g. rectennas

50/30 . . . using light, e.g. lasers

50/40 . . . using two or more transmitting or receiving devices (H02J 50/50 takes precedence)

50/50 . . . using additional energy repeaters between transmitting devices and receiving devices

50/60 . . . responsive to the presence of foreign objects, e.g. detection of living beings

50/70 . . . involving the reduction of electric, magnetic or electromagnetic leakage fields

50/80 . . . involving the exchange of data, concerning supply or distribution of electric power, between transmitting devices and receiving devices

50/90 . . . involving detection or optimisation of position, e.g. alignment
