H02M APPARATUS FOR CONVERSION BETWEEN AC AND AC, BETWEEN AC AND DC, OR BETWEEN DC AND DC, AND FOR USE WITH MAINS OR SIMILAR POWER SUPPLY SYSTEMS; CONVERSION OF DC OR AC INPUT POWER INTO SURGE OUTPUT POWER; CONTROL OR REGULATION THEREOF (systems for regulating electric or magnetic variables in general, e.g. using transformers, reactors or choke coils, combination of such systems with static converters G05F; {digital function or clock generators} for digital computers G06F 1/00, {G06F 1/025, G06F 1/04}; transformers H01F; connection or control of one converter with regard to conjoint operation with a similar or other source of supply H02J; dynamo-electric converters H02K 47/00; controlling transformers, reactors or choke coils, control or regulation of electric motors, generators or dynamo-electric converters H02P; pulse generators H03K; {static converters specially adapted for igniting or operating discharge lamps H05B 41/28})

NOTES
1. This subclass covers only circuits or apparatus for the conversion of electric power, or arrangements for control or regulation of such circuits or apparatus. The electrotechnical elements employed are dealt within the appropriate subclasses, e.g. inductors, transformers H01F, capacitors, electrolytic rectifiers H01G, mercury rectifying or other discharge tubes H01J, semiconductor devices H01L, impedance networks or resonant circuit not primarily concerned with the transfer of electric power H03H.
2. In this subclass, the following term is used with the meaning indicated:
   - "conversion", in respect of an electric variable, e.g. voltage or current, means the change of one or more of the parameters of the variable, e.g. amplitude, frequency, phase, polarity.

WARNINGS
1. The following IPC groups are not in the CPC scheme. The subject matter for these IPC groups is classified in the following CPC groups:
   - H02M 9/00 covered by H03K 3/53
   - H02M 9/02 covered by H03K 3/53
   - H02M 9/04 covered by H03K 3/53
   - H02M 9/06 covered by H03K 3/53
2. In this subclass non-limiting references (in the sense of paragraph 39 of the Guide to the IPC) may still be displayed in the scheme.

1/048 . (Circuits or arrangements for reducing losses (using snubbers H02M 1/34))

2001/0051 . . . . (Diode reverse recovery losses)

2001/0054 . . . . ('Transistor switching losses (periodically suspending operation of switching converter in low power mode H02M 2001/0035)')

2001/0058 . . . . [by employing soft switching techniques, i.e. commutation of transistor when voltage applied to it is zero and/or when current flowing through it is zero (in resonant inverters H02M 2007/4815)] in inverters operating from a resonant dc source H02M 7/4826; using an auxiliary actively switched resonant commutation circuit connected to an intermediate dc voltage or between two push-pull branches of an inverter bridge H02M 2007/4811]

1/061 . . . . ([using discharge tubes])

2001/0064 . . . . . . (Magnetic structures combining different functions, e.g. storage, filtering, transformation)

2001/0067 . . . . . . (Converter structures employing plural converter units, other than for parallel operation of the units on a single load)

2001/007 . . . . . . (Plural converter units in cascade (push-pull dc/dc converters with preregulator H02M 3/3374; dc-ac converters following a dc-ac stage which includes a high frequency transformer H02M 7/4807, dc-ac converters following a dc-ac conversion stage which generates a periodically varying voltage H02M 7/4826))

2001/0074 . . . . . . (Plural converter units whose inputs are connected in series)

2001/0077 . . . . . . (Plural converter units whose outputs are connected in series)

2001/008 . . . . . . (Plural converter units for generating at least two independent, non-parallel outputs, e.g. systems with plural point of load switching regulators)

2001/0083 . . . . . . (Converters characterized by their input or output configuration)

2001/0087 . . . . . . (adapted for receiving as input a current source)

2001/009 . . . . . . (having more than one output with independent control (for dc-dc converter with intermediate ac H02M 3/3356))

2001/0093 . . . . . . (wherein the output is created by adding a regulated voltage to or subtracting it from an unregulated input)

2001/0096 . . . . . . (Means for increasing hold-up time, i.e. the duration of time that a converter's output will remain within regulated limits following a loss of input power)

1/02 . . . . . . Circuits specially adapted for the generation of grid-control or igniter-control voltages for discharge tubes incorporated in static converters

1/04 . . . . . . . . . . . . for tubes with grid control

1/042 . . . . . . . . . . . . (wherein the phase of the control voltage is adjustable with reference to the AC voltage)

1/045 . . . . . . . . . . . . . . . . . . . . . . . . (for multiphase systems)

1/047 . . . . . . . . . . . . . . . . . . . . . . . . (for ignition at the zero-crossing of voltage or current)

1/06 . . . . . . Circuits specially adapted for rendering non-conductive gas discharge tubes or equivalent semiconductor devices, e.g. thytrons, thyristors

1/065 . . . . . . (for discharge tubes)

1/08 . . . . . . Circuits specially adapted for the generation of control voltages for semiconductor devices incorporated in static converters

1/081 . . . . . . (wherein the phase of the control voltage is adjustable with reference to the AC source)

1/082 . . . . . . (with digital control)

1/083 . . . . . . (for the ignition at the zero crossing of the voltage or the current)

1/084 . . . . . . using a control circuit common to several phases of a multi-phase system

1/0845 . . . . . . (digitally controlled (or with digital control))

1/088 . . . . . . for the simultaneous control of series or parallel connected semiconductor devices

1/092 . . . . . . the control signals being transmitted optically

1/096 . . . . . . the power supply of the control circuit being connected in parallel to the main switching element (H02M 1/092 takes precedence)

1/10 . . . . . . Arrangements incorporating converting means for enabling loads to be operated at will from different kinds of power supplies, e.g. from ac or dc

1/12 . . . . . . Arrangements for reducing harmonics from ac input or output

2001/123 . . . . . . (Suppression of common mode voltage or current)

1/126 . . . . . . (using passive filters)

1/14 . . . . . . Arrangements for reducing ripples from dc input or output

1/143 . . . . . . (using compensating arrangements (for reducing noise from the supply in transmission systems H04B 15/005))

1/146 . . . . . . (using discharge tubes)

1/15 . . . . . . using active elements

1/16 . . . . . . Means for providing current step on switching, e.g. with saturable reactor

1/20 . . . . . . Contact mechanisms of dynamic converters

1/22 . . . . . . incorporating collectors and brushes

1/24 . . . . . . incorporating rolling or tumbling contacts

1/26 . . . . . . incorporating cam-operated contacts

1/28 . . . . . . incorporating electromagnetically-operated vibrating contacts

1/30 . . . . . . incorporating liquid contacts

1/32 . . . . . . Means for protecting converters other than automatic disconnection (emergency protective circuit arrangements specially adapted for converters with automatic disconnection H02H 7/10)

2001/322 . . . . . . (Means for rapidly discharging a capacitor of the converter, in order to protect electrical components or prevent electrical shock)

2001/325 . . . . . . (with means for allowing continuous operation despite a fault, i.e. fault tolerant converters)

2001/327 . . . . . . (against abnormal temperatures)

1/34 . . . . . . Snubber circuits

2001/342 . . . . . . (Active non-dissipative snubbers)

2001/344 . . . . . . (Active dissipative snubbers)

2001/346 . . . . . . (Passive non-dissipative snubbers)

2001/348 . . . . . . (Passive dissipative snubbers)

1/36 . . . . . . Means for starting or stopping converters

1/38 . . . . . . Means for preventing simultaneous conduction of switches
Conversion of dc power input into dc power output

- 3/00 [with means for correcting output voltage deviations introduced by the dead time]
- 2003/078 [with means for reducing the back bias effect, i.e. the effect which causes the threshold voltage of transistors to increase as more stages are added to the converter]
- 3/08 [using discharge tubes without control electrode or semiconductor devices without control electrode]
- 3/10 [using discharge tubes with control electrode or semiconductor devices with control electrode (H02M 3/407 takes precedence)]
- 3/12 [using devices of a thyatron or thyristor type requiring extinguishing means]
- 3/13 [using discharge tubes only]
- 3/15 [using semiconductor devices only]
- 3/135 [with automatic control of output voltage or current, e.g. switching regulators]
- 3/139 [with digital control]
- 3/142 [including plural semiconductor devices as final control devices for a single load]
- 3/145 [using devices of a triode or transistor type requiring continuous application of a control signal]
- 3/15 [using discharge tubes only]
- 3/155 [using semiconductor devices only]
- 2003/1552 [Boost converters exploiting the leakage inductance of a transformer or of an alternator as boost inductor]
- 2003/1555 [for the generation of a regulated current to a load whose impedance is substantially inductive]
- 2003/1557 [Single ended primary inductor converters [SEPIC]]
- 3/156 [with automatic control of output voltage or current, e.g. switching regulators]
- 3/1563 [without using an external clock (H02M 3/1584 takes precedence)]
- 2003/1566 [with means for compensating against rapid load changes, e.g. with auxiliary current source, with dual mode control, with inductance variation]
- 3/157 [with digital control]
- 3/158 [including plural semiconductor devices as final control devices for a single load]
- 3/1582 [Buck-boost converters (H02M 3/1584 takes precedence)]
- 3/1584 [with a plurality of power processing stages connected in parallel]
- 2003/1586 [with a switched with a phase shift, i.e. interleaved]
- 3/1588 [comprising at least one synchronous rectifier element (H02M 3/1582, H02M 3/1584 take precedence)]
- 3/16 [by dynamic converters]
- 3/18 [using capacitors or batteries which are alternately charged and discharged, e.g. charged in parallel and discharged in series]
- 3/20 [by combination of static with dynamic converters; by combination of dynamo-electric with other dynamic or static converters]
with intermediate conversion into ac
by static converters
using discharge tubes without control electrode
or semiconductor devices without control
electrode to produce the intermediate ac
using discharge tubes with control electrode or
semiconductor devices with control electrode to
produce the intermediate ac
(Single converters with a plurality of
output stages connected in parallel (parallel
operation of a plurality of converters in dc
distribution networks H02J 1/10))
using devices of a thyatron or thyristor type
requiring extinguishing means
using discharge tubes only
using semiconductor devices only
{ with automatic control of the output
voltage or current }
using devices of a triode or a transistor type
requiring continuous application of a control
signal
using discharge tubes only
using semiconductor devices only
{ with automatic control of the output
voltage or current (H02M 3/33561,
H02M 3/33562 take precedence) }
{ with galvanic isolation between
input and output }
{ having at least two simultaneously
operating switches on the input side, e.g.
"double forward" or "double (switched)
flyback" converter }
{ of the forward type (H02M 3/3353,
H02M 3/33562 take precedence) }
{ with automatic control of the output
voltage or current (H02M 3/33561
takes precedence) }
{ with galvanic isolation between
input and output }
{ having more than one output with
independent control }
{ having several active switching
elements (H02M 3/3353 takes
precedence) }
{ having at least one active switching
element at the secondary side of an
isolation transformer }
{ Bidirectional converters }
{ having a synchronous rectifier

7/46 . . . using discharge tubes without control electrode or semiconductor devices without control electrode
7/48 . . . using discharge tubes with control electrode or semiconductor devices with control electrode
7/4903 . . . [with means for reducing dc component from ac output voltage]
7/4807 . . . [having a high frequency intermediate AC stage]
7/4814 . . . [having an auxiliary actively switched resonant commutation circuit connected to an intermediate dc voltage or between two push-pull branches]
7/4815 . . . [Resonant converters (H02M 2007/4811 and H02M 7/4826 take precedence)]
7/4815 . . . [with means for adaptation of resonance frequency, e.g. by modification of capacitance or inductance of resonance circuit]
7/4822 . . . [arranged for operation in parallel]
7/4826 . . . [operating from a resonant DC source, i.e. the DC input voltage varies periodically, e.g. resonant DC-link inverters]
7/483 . . . Converters with outputs that each can have more than two voltages levels
7/4835 . . . [comprising a plurality of cells, each including a switchable capacitor, the capacitors having a nominal charge voltage which corresponds to a given fraction of the input voltage, the capacitors being selectively connected in series to determine the instantaneous output voltage]
7/487 . . . Neutral point clamped inverters
7/49 . . . Combination of the output voltage waveforms of a plurality of converters
7/493 . . . the static converters being arranged for operation in parallel
7/4997 . . . sinusoidal output voltages being obtained by combination of several voltages being out of phase
7/501 . . . sinusoidal output voltages being obtained by the combination of several pulse-voltages having different amplitude and width
7/505 . . . using devices of a thyratron or thyristor type requiring extinguishing means (H02M 7/4807, H02M 7/483, H02M 7/493 and H02M 7/4826 take precedence)]
7/51 . . . using discharge tubes only
7/515 . . . using semiconductor devices only
7/515 . . . [with separate extinguishing means]
7/515 . . . [wherein each commutation element has its own extinguishing means]
7/515 . . . [wherein the extinguishing of every commutation element will be obtained by means of a commutation inductance, by starting another main commutation element in series with the first]
7/516 . . . Self-oscillating arrangements
7/517 . . . with special starting equipment
7/519 . . . in a push-pull configuration (H02M 7/517 takes precedence)
7/521 . . . in a bridge configuration
7/523 . . . with LC-resonance circuit in the main circuit
7/523 . . . [the commutation elements being in a push-pull arrangement]
7/523 . . . [in a series push-pull arrangement]
7/53 . . . with automatic control of output waveform or frequency (H02M 7/517 - H02M 7/523 take precedence)
7/527 . . . by pulse width modulation
7/529 . . . using digital control
7/53 . . . using devices of a triode or transistor type requiring continuous application of a control signal ([H02M 7/4807, H02M 7/493 and H02M 7/4826 take precedence])
7/533 . . . using discharge tubes only
7/533 . . . using semiconductor devices only, e.g. single switched pulse inverters
7/537 . . . with special starting equipment
7/538 . . . in a push-pull configuration (H02M 7/5375 takes precedence ; with oscillating arrangements H02M 7/5382, H02M 7/5384)
7/53803 . . . [with automatic control of output voltage or current]
7/53806 . . . [in a push-pull configuration of the parallel type]
7/5381 . . . Parallel type
7/5383 . . . in a self-oscillating arrangement (H02M 7/5383 takes precedence)
7/5383 . . . [in a push-pull arrangement]
7/53835 . . . [of the parallel type]
7/5383 . . . using a single commutation path
7/53846 . . . Control circuits

**WARNING**

Group H02M 7/53846 and subgroups is not complete, see provisionally also H02M 7/5383 and subgroups
{with analogue control of three-phase output}

{based on synthetising a desired voltage vector via the selection of appropriate fundamental voltage vectors, and corresponding dwelling times}

{by time shifting switching signals of one diagonal pair of the bridge with respect to the other diagonal pair}

with asymmetrical configuration of switches

**WARNING**

Group H02M 7/5388 is not complete, see provisionally also H02M 7/5387 and subgroups

with automatic control of output wave form or frequency

by pulse-width modulation

by dynamic converters

using mechanical parts to select progressively, or to vary continuously, the input potential

wherein the parts are rotating and collectors co-operate with brushes or rollers

with electromagnetically-operated vibrating contacts, e.g. chopper (self-interrupters in general H01H 51/34)

by combination of static with dynamic converters; by combination of dynamo-electric with other dynamic or static converters

with possibility of reversal

by static converters

using discharge tubes without control electrode or semiconductor devices without control electrode

using discharge tubes with control electrode or semiconductor devices with control electrode

using devices of a thyatron or thyristor type requiring extinguishing means (H02M 7/77 takes precedence)

using discharge tubes only

using semiconductor devices only

{for high voltage direct transmission link}

with automatic control of output waveform or frequency

arranged for operation in parallel

using devices of a triode or transistor type requiring continuous application of a control signal (H02M 7/81 takes precedence)

using discharge tubes only

using semiconductor devices only

arranged for operation in parallel

using open-spark devices, e.g. Marx rectifier

using electrolytic rectifiers

by dynamic converters

using mechanical parts to select progressively or to vary continuously the input potential

Power conversion systems not covered by the preceding groups
