

B05B

Spraying apparatus; atomising apparatus; nozzles ([N: sprayers or atomisers specially adapted for therapeutic purposes A61M11/00]; spray-mixers with nozzles B01F5/20; processes for applying liquids or other fluent materials to surfaces by spraying B05D; [N: nozzles specially adapted for injection moulding of plastics or substances in a plastic state B29C45/1603, B29C45/20; nozzles specially adapted for windscreen washers B60S1/52]; means for pumping fluids F04; valves, e.g. water-taps, F16K)

Definition statement

This subclass/group covers:

Apparatus for the release or projection of drops or droplets into the atmosphere or into a chamber to form a mist or the like. The materials to be projected may be suspended in a stream of gas or vapour.

Apparatus as above, for the release or projection of streams or sprays of other fluent materials, e.g. particulate material entrained in a gas, into the atmosphere or into a chamber.

Examples of such apparatus, and subcomponents thereof covered by this subclass, include:

Nozzles, spray heads, shower heads, roses, perforated pipes, spouts or other outlets, with or without auxiliary devices such as valves or heating means.

Spraying or sprinkling apparatus with moving outlet elements or moving deflecting elements.

Electrostatic spraying apparatus or installations.

Spraying apparatus for discharge of liquids or other fluent materials from two or more sources, e.g. of liquid and air or powder and gas.

Single-unit, i.e. unitary, hand-held apparatus in which flow of liquid is produced by the operator at the moment of use, e.g. by pumping, by squeezing a liquid container or by compressing a compressible bulb.

Spraying plants, e.g. with means for supporting or feeding work; spray booths.

Other spraying-type machines or apparatus, including fountains.

Means for heating, mixing or pressurising of gases, liquids or other fluent materials that are sprayed, sprinkled, misted, released or projected using the apparatus of this subclass.

Delivery control means or other details or accessories for use with the apparatus of this subclass.

Relationship between large subject matter areas

Subclass [B05C](#) relates to apparatus for applying liquids or other fluent materials to surfaces in general. This subject matter generally relates to contact methods e.g. spreading, pouring, dipping, rubbing, using rollers, using fluidized bed techniques etc. but not to spraying or atomising apparatus which is covered by subclass [B05B](#). [B05C](#) also relates to apparatus for projecting liquids or other fluent materials onto surfaces ([B05C 5/00](#)) or to the inside of hollow work ([B05C 7/02](#)), and further to apparatus specially adapted for the projection of particulate material onto surfaces ([B05C 19/04](#)). In [B05C](#), 'projection' relates to the application of a continuous stream of liquid or other fluent (e.g. particulate) material to a surface. In [B05B](#), 'projection' relates to the release of a discontinuous stream of drops, droplets or a cloud of particulate material into the atmosphere or into a chamber to form a mist or the like.

Subclass [B05D](#) relates to processes (including processes performed by spraying) for applying liquids or other fluent materials to surfaces in general.

Special rules of classification within this subclass

Arrangement for cleaning discharge opening/devices/dispensing heads of apparatus belonging to subclass [B05C](#) are classified in the relevant place of [B05C](#) as well as in [B05B 15/02](#) and subgroups.

Considering the possible broad interpretation of the scope of [B05B](#), it is essential to pay attention to all references appearing in many titles of the [B05B](#) places. All devices relating to specific application fields are normally not classified in [B05B](#) unless some general function aspects are considered of relevance and are therefore (also) classified in [B05B](#).

Glossary of terms

In this subclass/group, the following terms (or expressions) are used with the meaning indicated:

Coating	The applied material. A coating may be a solidified layer originally applied as a liquid (e.g. dried paint) or a layer of material which, once applied, remains in a liquid or semi-liquid state (e.g. lubricant).
Liquid or fluent	designates materials which can flow,

	e.g. liquids, including solutions, dispersions and suspensions, as well as semi-liquids, pastes, melts and particulate materials.
Particulate materials	Solid materials in the form of very small pieces, e.g. powders, granules, short fibres or chips.

B05B 1/28

with integral means for shielding the discharged liquid or other fluent material, e.g. to limit area of spray; with integral means for catching drips or collecting surplus liquid or other fluent material (means for any of these purposes, per se, B05B15/04)

B05B 7/2402

[N: Apparatus to be carried on or by a person, e.g. by hand; Apparatus comprising containers fixed to the discharge device (B05B7/0012 takes precedence)]

Relationship between large subject matter areas

Apparatus of the [B05B 7/00](#) type which are to be carried on or by a person, e.g. by hand, and which have a container are classified in [B05B 7/2405+](#), [B05B 7/244+](#).

[B05B 11/00](#) takes precedence.

Apparatus of the [B05B 9/00](#) type which are to be carried on or by a person, e.g. by hand, and have a container being put under pressure are classified in

[B05B 9/0805+](#).

B05B 9/08

Apparatus to be carried on or by a person, e.g. of knapsack type ([N: B05B9/0426, B05B11/00 take precedence]; details or components, e.g. casings, bodies of portable power-driven tools not particularly related to the operation performed B25F5/00)

Relationship between large subject matter areas

Apparatus of the [B05B 9/00](#) type which are to be carried on or by a person, e.g. by hand, and have a container being put under pressure are classified in [B05B 9/0805+](#).

[B05B 11/00](#) takes precedence.

Apparatus of the [B05B 7/00](#) type which are to be carried on or by a person, e.g. by hand, and which have a container are classified in [B05B 7/2405+](#), [B05B 7/244+](#).

Informative references

Attention is drawn to the following places, which may be of interest for search:

Details or components, e.g. casings, bodies, of portable power-driven tools not particularly related to the operation performed	B25F 5/00
---	---------------------------

B05B 11/00

Single-unit, i.e. unitary, hand-held apparatus [N: comprising a container and a discharge nozzle attached thereto], in which flow of liquid or other fluent material is produced by [N: the muscular energy of] the operator at the moment of use [N: or by an equivalent manipulator independent from the apparatus (apparatus with an external source or the possibility of permanent accumulation of pressure for discharging the liquid or fluid material B05B7/00, B05B9/00)]

Relationship between large subject matter areas

The expression "Single-unit, i.e. unitary, hand-held apparatus comprising a container and a discharge nozzle attached thereto" is very important to

properly define the border line with other areas of [B05B](#) as well as with other technical fields, e.g. [B65D](#), [A47K](#), [F04B](#).

Single-unit, i.e. unitary, hand-held apparatus in which there exists a possibility to accumulate permanently a certain pressure on the material, e.g. liquid, and wherein this pressure is used to discharge the material through the outlet are not classified in [B05B 11/00](#) and sub-groups, but in [B05B 9/0805](#) and subgroups or [B05B 7/2402](#) and subgroups.

In apparatus classified in [B05B 11/309](#) and subgroups, energy can be stored, e.g. in the form of a compressed spring. However the stored energy does not generate permanent pressure on the material for discharging the latter. Only when the spring is released is the material pressurized in the pump chamber.

In apparatus classified in [B05B 11/004](#) and sub-groups, reservoirs containing the material may be permanently pressurized, e.g. by a follower piston pushed by a spring. However this pressure is not used to discharge the material but only to feed the latter to a discharge device, e.g. a pump.

Aerosol containers are classified in [B65D 83/14](#) and subgroups.

Apparatus of the [B05B 7/00](#) type which are to be carried on or by a person, e.g. by hand, and which have a container are classified in [B05B 7/2405+](#), [B05B 7/244+](#).

Apparatus of the [B05B 9/00](#) type which are to be carried on or by a person, e.g. by hand, and have a container are classified in [B05B 9/0805+](#).

Glossary of terms

In this subclass/group, the following terms (or expressions) are used with the meaning indicated:

In this group, the following terms or expressions are used with the meaning indicated:

Pump	A device comprising a chamber into which the material is first sucked from the container through an inlet, then delivered out of the chamber, e.g. sprayed, through an outlet. Inlet and outlet can be equipped with valves.
Lift valve	A valve as defined in main group F16K 1/00 , i.e. a cut-off device with closure members having at least a component of their opening and closing motion perpendicular to the closing faces.
Gate valve or sliding valve	A valve as defined in main group

	F16K 3/00 , i.e. cut-off device with closing members having a sliding movement along the seat for opening and closing.
--	--

B05B 11/30

the flow being effected by a pump

Relationship between large subject matter areas

For historical and pragmatic reasons all single-units, i.e. unitary, hand-held apparatus wherein the flow is effected by a pump are classified in [B05B 11/25](#) and subgroups, irrespective of whether the material is sprayed or simply dispensed.

This is justified by the fact that technical features of spray pumps are similar if not identical to the ones of dispensing pumps. Many patent applications do not even mention the word "spray" in the claims/description, thereby avoiding to restrict the scope of protection.

The JPO appears to classify in the same way as many single-units hand-held apparatus with dispensing pumps are classified in IPC main group [B05B 11/00](#).

A consequence of the above is that IPC group [B65D 47/34](#) which covers a similar concept, i.e. containers having closures with discharge by pumping, does not exist in CPC, in agreement with examiners and classifiers of [B65D](#).

B05B 12/14

for supplying a selected one of a plurality of liquids or other fluent materials [N: or several in selected proportions] to a [N: spray apparatus, e.g. to a] single spray outlet

Relationship between large subject matter areas

Apparatus for changing colours are classified in [B05B 12/14](#) and subgroups.

B05B 15/12

Spray booths
