

C09B

ORGANIC DYES OR CLOSELY-RELATED COMPOUNDS FOR PRODUCING DYES; MORDANTS; LAKES (fermentation or enzyme-using processes to synthesise a desired chemical compound C12P)

Definition statement

This subclass/group covers:

- Dyes (coloured compounds being at least partially soluble in a liquid medium; thereby the chemical structure of the chromophore might be relevant for the sub-group given for a certain dye class [e.g. anthracene dyes ([C09B 1/00](#)), monoazo dyes ([C09B 29/00](#)), quinacridones ([C09B 48/00](#))] etc.)] or functional groups attached to the chromophore might be relevant [e.g. reactive dyes ([C09B 62/00](#)), Dyes containing a splittable water solubilizing group ([C09B 69/08](#))]; further, polymeric dyes ([C09B 69/10](#)) are also enclosed in [C09B](#), which are reaction products of dyes with monomers or with macromolecular compounds; thereby the dye might be a repeating unit in the polymer chain or it might be connected by a covalent bond to the polymer chain as a pending group
- Pigments (coloured compounds being insoluble in liquid systems)
- Compositions comprising dyes and/or pigments and further additives (e.g. comprising polymeric dispersing agents ([C09B 67/009](#)))
- Blends of at least two dyes and/or pigments ([C09B 67/0033](#))
- Preparation processes to prepare dyes or pigments (e.g. special methods of performing the coupling reaction of azo dyes ([C09B 41/00](#)))
- Dye or pigment preparations of special physical nature, e.g. tablets, films, extrusion, microcapsules, sheets, pads, bags with dyes ([C09B 67/0097](#))
- Treatment of dyes or pigments without chemical reactions in order to influence the physical properties (classified in the main group [C09B 67/00](#)), e.g. acid pasting ([C09B 67/0017](#)), grinding, milling ([C09B 67/0002](#)), coating ([C09B 67/0004](#)), flushing ([C09B 67/0021](#)), etc.

In main group ([C09B 68/00](#)), the surface modification of pigments with chemical reactions is covered. Thereby the establishing of covalent/complex bonds of chemical groups on the surface of the pigment is the point of interest.

Certain fluorescent dyes or pigments of specific structure like Fluorescein derivatives ([C09B 11/08](#)), Rhodamine derivatives ([C09B 11/24](#)), Stilbene dyes ([C09B 23/148](#)) etc.); thereby it is mentioned, that there is no main- or subgroup which explicitly mentions properties like luminescence, fluorescence or phosphorescence; luminescent compounds are merely classified by the

chemical structure of their chromophore

- Dyes, especially pigments having a certain crystal modification; special X-ray patterns ([C09B 67/0025](#))
- Purification, Precipitation, or Filtration of dyes or pigments ([C09B 67/0096](#))
- Dyestuff salts, e.g. salts of acid dyes with basic dyes; thereby the counter ion of the dye might not be a standard ion like Na⁺, K⁺, Ca²⁺, NH₄⁺ or Cl⁻, SO₄²⁻, NO₃⁻ etc., but rather a complex non-common ion like a charged dyestuff itself or similar ions ([C09B 69/02](#))
- The term "closely related Compounds" in the title of this sub class covers compounds, which could be seen as precursors for dyes becoming dyes after a minor modification, e.g. a chemical reaction or pH-change; so there is a clear structural similarity between the closely related compound and the dye.

Relationship between large subject matter areas

The subclass [C09B](#) may overlap with many other subclasses relating to the use of dyes or pigments. In general, a [C09B](#) class is given to documents which describe dyes/pigments appearing to be novel as such or compositions/preparations of dyes/pigments which appear to be novel; further, documents disclosing novel preparation processes for dyes/pigments should be put into [C09B](#).

E.g., a document describing inks ([C09D 11/00](#)), which comprise already known dyes or pigments, should only be put into [C09D 11/00](#); in case the inks comprise dyes or pigments not yet known in the prior art, the corresponding [C09B](#) sub-group should be given.

References relevant to classification in this subclass

This subclass/group does not cover:

Fermentation or enzyme-using processes to synthesise a desired chemical compound	C12P
Inorganic dyes/pigments	C09C
Intermediate organic compounds to prepare dyes/pigments	C07C ; C07D
Preparation of the mordant compounds	C01F ; C07

Recording or reproducing by optical means, containing dyes, e.g. layers in DVD's, CD's, Blue rays	G11B 7/246

Electrolytic light sensitive devices using dyes (Dye Sensitized Solar Cells, DSSc)	H01G 9/20
Light sensitive devices; comprising an organic dye as the active light absorbing material, e.g. adsorbed on an electrode or dissolved in solution	H01G 9/2059
Solid state devices using organic materials (e.g. dyes) as the active part, or using a combination of organic materials with other materials as the active part (Organic solar cells, organic light emitting devices [OLEDs])	H01L 51/00

Special rules of classification within this subclass

In this subclass, in the absence of an indication to the contrary, a compound is classified in the last appropriate place ('Last Place Rule')

As an example the following explanation is given: In the sub-group [C09B 1/02](#) hydroxy-anthraquinones are classified. We search a sub-group for the compound 1-hydroxy-2-chloro-anthraquinone. The correct sub-group is [C09B 1/10](#).

Now we search a sub-group for the compound 1-hydroxy-2-chloro-3-nitro-anthraquinone; again, the correct sub-group is [C09B 1/10](#). In case we search a sub-group for the compound 1-hydroxy-2-chloro-3-sulfo-anthraquinone, we have to choose, following the 'Last Place Rule', the sub-group [C09B 1/12](#); to avoid a loss of information, also the group [C09B 1/10](#) should be considered.

Glossary of terms

In this subclass/group, the following terms (or expressions) are used with the meaning indicated:

Onium group	ionic groups bearing a positive charge comprising nitrogen, phosphor etc. as the charged atom
Aralkyl, arylalkyl	unless other specified (exception: C09B 1/526), both sequences alkyl-aryl and aryl-alkyl are meant (see e.g. C09B 1/514 and C09B

	1/515)
Carbocyclic ring	here aromatic as well as a non-aromatic rings are mentioned (no heterocyclic rings)
Sulfonated	having a SO ₃ H or SO ₃ # group attached
Sulfo	SO ₃ H
Sulfonat	SO ₃ #
Leuco form	the form of a reduced dye which is normally uncoloured or only slightly coloured compared to the dye itself (e.g. indigo and its leuco-form)
Vat dyeLeuco dye	sometimes insoluble dyes (e.g. indigoid dyes) are transferred into their soluble derivatives (e.g. leuco form) by e.g. reduction and then contacted with the material to be coloured; the soluble form is then converted into its insoluble form e.g. by oxidation; such dyes are called 'vat dyes' (in german: Küpenfarbstoff)
Cyanine dyes	specific polymethine dyes having N-heterocyclic rings at both end of the polymethin chain (push-pull-system)
Acid dyes	water-soluble anionic dyes
Basic dyes	water-soluble cationic dyes
Substantive dyes (or Direct dyes)	are directly applied to the fibre from aqueous solution; especially suitable for cellulosic fibres
Mordant dyes	see definition below in the Annex for C09B 65/00
Reactive dyes	see definition below in the Annex for C09B 62/00
Disperse dyes	are generally water insoluble; the

	dyes are finely ground in the presence of a dispersing agent; their main use is to dye polyester
Sulfur dyes	see definition below for C09B 49/00
Lakes	A dye made insoluble in order to have pigmentary properties by precipitating the water soluble form of the dye (bearing SO ₃ H resp. COOH groups) by salting out with cations of the rare earth metals (Ca ²⁺ , Mg ²⁺ , also Al ³⁺)

Synonyms and Keywords

In patent documents the following abbreviations are often used:

LCD	Liquid Crystal Display
DSSc	Dye sensitised solar cells
LED	Light Emitting Diode
OLED	Organic Light Emitting Diode
2D	two dimensional
3D	three dimensional
C.I.	means Colour Index (C.I.); refers to colorants indexed in the Colour Index International [http://www.colour-index.org/login.aspx]
µm	micrometer (10 ⁻⁶ meter)
Nm	nanometer (10 ⁻⁹ meter)
CF	Color Filter
TFT	Thin Film Transistor
DPP	Diketopyrrolopyrrole (a type of pigment, see C09B 57/004)

DVD	Digital Versatile Disc
CD	Compact Disc

C09B 1/00

Dyes with an anthracene nucleus not condensed with any other ring

Definition statement

This subclass/group covers:

For example:

Dyes containing ether groups, e.g.:

[C09B 1/16](#)

Amino anthraquinones, e.g.:

[C09B 1/201](#)

Dyes with no other substituents than the amino groups

[C09B 1/202](#)

sulfonated amino anthraquinones, e.g.:

[C09B 1/205](#)

Dyes with an unsaturated C on the N atom attached to the nucleus; for C=O, C=S: [C09B 1/36](#) takes precedence

also in case of acylated amino groups: [C09B 1/36](#) takes precedence

[C09B 1/206](#)

Dyes with amino groups substituted by heterocyclic radicals; for triazinic or analogous heterocyclic radicals: [C09B 1/46](#) takes precedence

[C09B 1/207](#)

Dyes with amino groups and onium groups

[C09B 1/208](#)

amino groups substituted by inorganic radicals, e.g.:

[C09B 1/22](#)

Dyes with unsubstituted amino groups

[C09B 1/24](#)

sulfonated

sulfonated dyes with unsubstituted amino groups

[C09B 1/26](#)

Dyes with amino groups substituted by hydrocarbon radicals

[C09B 1/262](#)

Dyes with no other substituents than the substituted amino groups

Dyes with amino groups substituted by hydrocarbon radicals and no other substituents than the substituted amino groups

[C09B 1/264](#)

sulfonated dyes with amino groups substituted by hydrocarbon radicals:

in case that both the anthracene nucleus and its substituent are sulfonated

[C09B 1/28](#)

Dyes with amino groups substituted by alkyl, aralkyl, or cyclo-alkyl groups

[C09B 1/30](#)

Sulfonated dyes with amino groups substituted by alkyl, aralkyl, or cyclo-alkyl groups:

in case that both the anthracene nucleus and its substituent are sulfonated

[C09B 1/303](#)

Sulfonated dyes with amino groups substituted by alkyl, aralkyl, or cyclo-alkyl groups:

only sulfonated in the anthracene nucleus

[C09B 1/32](#)

Dyes with amino groups substituted by aryl groups (anthrimides [C09B 1/48](#) take precedence)

[C09B 1/34](#)

sulfonated dyes with amino groups substituted by aryl groups:

in case that both the anthracene nucleus and the aryl substituent are sulfonated

[C09B 1/38](#)

Urea or thiourea derivatives

[C09B 1/40](#)

the acyl groups being residues of an aliphatic or araliphatic carboxylic acid

[C09B 1/42](#)

the acyl groups being residues of an aromatic carboxylic acid

[C09B 1/425](#)

the acyl groups being residues of a dicarboxylic acid; this sub group does not contain any documents (see comment to sub group [C09B 1/43](#) below)

[C09B 1/43](#)

Dicarboxylic acids: this sub group covers in principle the same compounds as the sub group [C09B 1/425](#) above; however, this sub group contains documents. It is foreseen to bring this matter in accordance with the classification Rules in a later request.

[C09B 1/44](#)

the acyl groups being residues of a heterocyclic carboxylic acid

[C09B 1/46](#)

anthraquinone dyes with acylated amino groups, the acyl groups being residues of cyanuric acid or an analogous heterocyclic compound

[C09B 1/467](#)

attached to two or more anthraquinone rings

anthraquinone dyes with acylated amino groups, the acyl groups being residues of cyanuric acid or an analogous heterocyclic compound and being further attached to two or more anthraquinone rings

[C09B 1/473](#)

the acyl groups being residues of a sulfonic acid

anthraquinone dyes with acylated amino groups, the acyl groups being residues of a sulfonic acid

[C09B 1/48](#)

Anthrimides

two anthraquinone chromophores directly linked by -NH- or a substituted derivative thereof

[C09B 1/50](#)

Amino-hydroxy anthraquinones; Ethers or esters thereof
[Seleno-anthraquinones [C09B 1/007](#) take precedence]

[C09B 1/503](#)

unsubstituted amino-hydroxy anthraquinone

[C09B 1/51](#)

N-substituted amino-hydroxy anthraquinone

[C09B 1/512](#)

N-substituted amino-hydroxy anthraquinone, with only amino and hydroxy groups

[C09B 1/514](#)

N-aryl derivatives of amino-hydroxy anthraquinones (N-alkyl derivatives [C09B 1/515](#) take precedence)

[C09B 1/5145](#)

N-substituted amino-hydroxy anthraquinones, with only amino and hydroxy groups

[C09B 1/515](#)

N-alkyl, N-alkyl or N-cycloalkyl derivatives of substituted amino-hydroxy anthraquinones

[C09B 1/5155](#)

N-alkyl, N-aralkyl or N-cycloalkyl derivatives of amino-hydroxy anthraquinone with only amino and hydroxy groups

[C09B 1/516](#)

N-acylated derivatives
of amino-hydroxy anthraquinones

[C09B 1/52](#)

sulfonated amino-hydroxy anthraquinones:
in case that both the anthracene nucleus and the substituent are sulfonated

[C09B 1/523](#)

sulfonated N-substituted amino-hydroxy anthraquinones:

with substituents not covered by [C09B 1/525](#) to [C09B 1/528](#) (like heterocyclic, see example)

[C09B 1/54](#)

etherified derivatives of amino-hydroxy anthraquinones

with substituents not covered by [C09B 1/542](#) to [C09B 1/547](#) (like heterocyclic, see examples)

or

[C09B 1/542](#)

Amino-hydroxy anthraquinones with aliphatic, cycloaliphatic, araliphatic or aromatic ether groups, e.g.:

[C09B 1/542](#) contains documents having both types of anthraquinones: compounds with aliphatic ether groups and compounds with aromatic ether groups (thereby cases are included, where the kind of ether group can vary).

[C09B 1/545](#) contains only documents with compounds with aliphatic ethers, thereby [C09B 1/547](#) deals with compounds with aromatic ethers; in case documents contain compounds having both types of ether groups, the last place rule should be applied ([C09B 1/547](#)); in order to avoid a loss of information, also the sub group [C09B 1/542](#) should be considered here

[C09B 1/545](#)

Amino-hydroxy anthraquinones with aliphatic, cycloaliphatic or araliphatic ether groups

[C09B 1/547](#)

Amino-hydroxy anthraquinones with aromatic ether groups

or

[C09B 1/56](#)

Mercapto-anthraquinones

[C09B 1/58](#)

Mercapto-anthraquinones with mercapto groups substituted by aliphatic, cycloaliphatic, araliphatic or aryl radicals

for these sub groups [C09B 1/58](#), [C09B 1/585](#) and [C09B 1/60](#) the same classification rule applies as in the above mentioned case concerning the sub groups [C09B 1/542](#), [C09B 1/545](#) and [C09B 1/547](#)

[C09B 1/585](#)

substituted by aryl radicals

[C09B 1/60](#)

substituted by aliphatic, cycloaliphatic or araliphatic radicals;

[C09B 1/62](#)

Mercapto-anthraquinones with mercapto groups substituted by a heterocyclic ring

C09B 3/00

Dyes with an anthracene nucleus condensed with one or more carbocyclic rings;

Definition statement

This subclass/group covers:

For example, documents disclosing compounds like:

Special rules of classification within this group

Care should be taken with view to the sub group [C09B 3/78](#), which comprises documents disclosing one (or possibly more) specific structures not covered by the preceding subgroups [C09B 3/02](#) up to [C09B 3/76](#), while [C09B 3/00](#) covers documents disclosing several structures falling under different subgroups from [C09B 3/02](#) to [C09B 3/76](#); all documents which are not covered by the groups [C09B 3/02](#) up to [C09B 3/76](#) should be put into [C09B 3/78](#)

Further details of subgroups:

[C09B 3/02](#)

Benzanthrones

[C09B 3/10](#)

Other dyes in which the anthracene nucleus is condensed with one or more carbocyclic rings (see the comment to main group [C09B 3/00](#))

C09B 5/00

Dyes with anthracene nucleus condensed with one or more heterocyclic rings with or without carbocyclic rings

Definition statement

This subclass/group covers:

This main group covers:

For example:

or

or

Special rules of classification within this group

Further details of subgroups:

[C09B 5/002](#)

the heterocyclic rings being condensed in peri-position and in 1-2 or 2-3 position

Dyes with anthracene nucleus condensed with one or more heterocyclic rings with or without carbocyclic rings, the heterocyclic rings being condensed in peri-position and in 1-2 or 2-3 position and not covered/provided by any of the [C09B 5/004](#) to [C09B 5/008](#) sub groups (e.g. N and S-containing hetero rings,

example)

[C09B 5/004](#)

only O-containing heterorings

the heterocyclic rings being condensed in peri-position (see example) and in 1-2 or 2-3 position

[C09B 5/006](#)

only S-containing heterorings

the heterocyclic rings being condensed in peri-position and in 1-2 or 2-3 position

[C09B 5/022](#)

compounds not provided for in one of the sub groups [C09B 5/04](#) to [C09B 5/20](#)

the heterocyclic rings being only condensed in peri-position

[C09B 5/028](#)

with only N-containing heterorings

the heterocyclic rings being only condensed in peri-position

[C09B 5/04](#)

Pyrazolanthrones

[C09B 5/06](#)

Benzanthronyl-pyrazolanthrene condensation products

'condensation' in this context means obviously, that also two chromophores could be linked by a single covalent bond (see formula below)

[C09B 5/08](#)

Dipyrazolanthrones

at least two pyrazolanthrones moieties linked directly or by a chemical linker

[C09B 5/085](#)

Condensation products of dipyrazolanthrones

[C09B 5/10](#)

Isothiazolanthrones (see example); Isoxazolanthrones; Isoselenazolanthrones

[C09B 5/12](#)

Thiophenanthrones

[C09B 5/14](#)

Benz-azabenzanthrones (anthrapyridones)

[C09B 5/16](#)

Benz-diazabenzanthrones, e.g. anthraprimidones

[C09B 5/18](#)

Coeroxene (see example); Coerthiene; Coeramidene; Derivatives thereof

[C09B 5/20](#)

Flavanthrones

[C09B 5/24](#)

the heterocyclic ring(s) being condensed with an anthraquinone nucleus in 1-2 (see example) or 2-3 position

Dyes with an anthracene nucleus condensed with one or more heterocyclic rings with or without carbocyclic rings, wherein the heterocyclic ring(s) being condensed with an anthraquinone nucleus in 1-2 (see example) or 2-3 position

[C09B 5/2409](#)

not provided for in one of the sub groups [C09B 5/26](#) to [C09B 5/62](#)

the heterocyclic ring(s) being condensed with an anthraquinone nucleus in 1-2 (see example) or 2-3 position and not provided for in one of the sub groups [C09B 5/26](#) to [C09B 5/62](#)

[C09B 5/2418](#)

with only oxygen-containing heterorings

the heterocyclic ring(s) being condensed with an anthraquinone nucleus in 1-2 (see example) or 2-3 position

[C09B 5/2445](#)

Phthaloyl isoindoles

the isoindole ring being condensed with an anthraquinone nucleus in 1-2 or 2-3 position (see example)

[C09B 5/2454](#)

5,6-phtaloyl-dihydro-isoindoles

[C09B 5/2463](#)

1,3 oxo or imino derivatives

means that the oxo or imino function is independently located in the 1,3 - position (below you see the 1,3-oxo derivative)

[C09B 5/2481](#)

1-oxo-3-imino derivatives, e.g.:

[C09B 5/26](#)

Carbazoles of the anthracene series

[C09B 5/28](#)

Anthrimide carbazoles

[C09B 5/30](#)

1,2-azoles of the anthracene series

[C09B 5/32](#)

1,3-azoles of the anthracene series

[C09B 5/34](#)

Anthraquinone acridones or thioxanthenes

Anthraquinone acridones (see example below), anthraquinone thioxanthenes (with S instead of NH)

[C09B 5/36](#)

Amino acridones

[C09B 5/38](#)

Compounds containing acridone and carbazole rings

[C09B 5/40](#)

Condensation products of benzanthranyl-amino anthraquinones

[C09B 5/42](#)

Pyridino anthraquinones

[C09B 5/44](#)

Azines of the anthracene series

(example below: 1,3-diazine)

[C09B 5/46](#)

Para-diazines

condensed with 1,4-diazine

[C09B 5/48](#)

Bis-anthraquinonediazines (indanthrone)

[C09B 5/60](#)

Thiazines; Oxazines (the example below is the oxazine)

the example below is the oxazine; thiazines have S instead of O

[C09B 5/62](#)

Cyclic imides or amidines of peri-dicarboxylic acids of the anthracene, benzanthrene, or perylene series

care has to be taken with view to sub group [C09B 3/14](#)

C09B 6/00

Anthracene dyes not provided for above

Definition statement

This subclass/group covers:

As an example for a compound not falling under [C09B 1/00](#) to [C09B 5/00](#) see below (see e.g. US4113749):

C09B 7/00

Indigoid dyes

Definition statement

This subclass/group covers:

Indigoid dyes and derivatives not covered/provided by its sub-groups (example up: wherein X is O, S, etc., while Y means NH; O, S, etc. or example down)

or

Special rules of classification within this group

Further details of subgroups:

[C09B 7/02](#)

Bis-indole indigos

[C09B 7/06](#)

Indone-thionaphthene indigos

[C09B 7/08](#)

Other indole-indigos

not covered by the upper groups: e.g. with other heteroatom instead of NH (like O, see bis-oxodihydro-indolylene-benzodifuranone from example)

[C09B 7/10](#)

Bis-thionaphthene indigos

[C09B 7/12](#)

Other thionaphthene indigos

Esters or ester-salts of leuco compounds of vat dyestuffs

Definition statement

This subclass/group covers:

Esters or ester-salts of leuco compounds of vat dyestuffs of other dyes not covered by [C09B 9/02](#) and [C09B 9/04](#) (example)

Special rules of classification within this group

Further details of subgroups:

[C09B 9/02](#)

of anthracene dyes

Esters or ester-salts of leuco compounds of vat dyestuffs of anthracene dyes

[C09B 9/04](#)

of indigoid dyes

Esters or ester-salts of leuco compounds of vat dyestuffs of indigoid dyes

C09B 11/00

Diaryl- or triarylmethane dyes

Definition statement

This subclass/group covers:

Diaryl- or triarylmethane dyes; generally the coloured forms of these dyes have a sp^2 -hybridisation at the central C-atom

Special rules of classification within this group

Further details of subgroups:

[C09B 11/08](#)

Phthaleins, e.g. Phenolphthaleine (left) and Fluoresceine (right)

[C09B 11/12](#)

Amino derivatives of triarylmethanes without any OH group bound to an aryl nucleus

[C09B 11/22](#)

Amino derivatives of triarylmethanes containing OH groups bound to an aryl nucleus and derivatives thereof (like ethers (example) and esters)

[C09B 11/24](#)

Phthalains containing amino groups (see left); example for a phthalane (see right):

thereby the phthalane itself has the structure:

fluorans:

phthalides:

example for rhodamine:

[C09B 11/245](#)

Phthaleins having both OH and amino substituent(s) on an aryl ring

[C09B 11/26](#)

Triarylmethane dyes in which at least one of the aromatic nuclei is heterocyclic

[C09B 11/28](#)

Pyronines (xanthon: X=O; thioxanthon: X=S; selenoxanthon X=Se; telluroxanthon X=Te)

C09B 13/00

Oxyketone dyes

Definition statement

This subclass/group covers:

Oxyketone dyes not covered by its sub groups (example)

Special rules of classification within this group

Further details of subgroups:

[C09B 13/02](#)

Oxyketone dyes of the naphthalene series, e.g. naphthazarin

[C09B 13/04](#)

Oxyketone dyes of the pyrene series

[C09B 13/06](#)

Oxyketone dyes of the acetophenone series, means here: derivatives of:

C09B 15/00

Acridine dyes

Definition statement

This subclass/group covers:

Illustrative example of subject matter classified in this group.

C09B 17/00

Azine dyes

Definition statement

This subclass/group covers:

Illustrative example of subject matter classified in this group.

Special rules of classification within this group

Further details of subgroups:

[C09B 17/005](#)

Azine dyes containing at least four ortho-condensed rings with at least two N-atoms in the system, e.g. fluoflavine (left), fluorubine (right)

,

[C09B 17/02](#)

Azine dyes of the benzene series

Nigrosines are black azine dyes closely related to indulines, thereby their structures are not clearly defined; they should be classified here in [C09B 17/02](#)

[C09B 17/04](#)

Azine dyes of the naphthalene series

[C09B 17/06](#)

Fluorindine or its derivatives

C09B 19/00

Oxazine dyes

Definition statement

This subclass/group covers:

Illustrative example of subject matter classified in this group.

Special rules of classification within this group

Further details of subgroups:

Gallocyanine dyes

[C09B 19/02](#)

Bisoxazines prepared from aminoquinones

C09B 21/00

Thiazine dyes

Definition statement

This subclass/group covers:

Illustrative example of subject matter classified in this group.

C09B 23/00

Methine or polymethine dyes, e.g. cyanine dyes

Definition statement

This subclass/group covers:

Methine or polymethine dyes, e.g. cyanine dyes; thereby methine or polymethine dyes comprise one or more CH-moieties linked with each other in order to establish a conjugated system: $-\text{CH}=\text{CH}-\text{x}-$, thereby x is zero or bigger.

Special rules of classification within this group

Concerning the classification method with view to the sub groups [C09B 23/02](#) up to [C09B 23/086](#) and [C09B 23/10](#) up to [C09B 23/107](#): in case a document comprises at the same time dyes with one, three, five and seven methin groups in the chain, put it into the sub groups [C09B 23/04](#), [C09B 23/06](#), [C09B 23/083](#) and [C09B 23/086](#); in case a document comprises at the same time dyes with e.g. two and four methin groups in the chain, put it into the sub groups [C09B 23/105](#) and [C09B 23/107](#). Although this stays in contradiction to the classification philosophy of the last-place-rule, it has been done so in the past.

Further details of subgroups:

[C09B 23/0008](#)

[N :substituted on the polymethine chain]

[C09B 23/0066](#)

the polymethine chain being part of a carbocyclic ring, (e.g. benzene, naphthalene, cyclohexene, cyclobutenene-quadratic acid)]

[C09B 23/0083](#)

the polymethine chain being part of an heterocyclic ring, thereby the heteroring being rhodanine (left) in the chain (see example right)

;

[C09B 23/0091](#)

[N :having only one heterocyclic ring atom at one end of the methin chain, e.g. hemicyanines, hemioxonol (styryl dyes see [C09B 23/14](#))]

Methine dyes having only one heterocyclic ring at one end of the methine chain, e.g. hemicyanine dyes (see formula below)

[C09B 23/04](#)

Monomethine dyes, wherein the polymethine chain contains only one

C09B 37/00

Azo dyes prepared by coupling the diazotised amine with itself

Definition statement

This subclass/group covers:

Illustrative example of subject matter classified in this group.

Special rules of classification within this group

Note(s): In these main groups (Azo dyes [C09B 29/00](#) to [C09B 39/00](#)) and related sub groups, arrows in the formulae of the various types of azo dyes indicate which part of an azo dye, prepared by diazotising and coupling, is derived from the diazo component and which part is derived from the coupling component. The arrow is pointing to the part derived from the coupling component.

C09B 39/00

Other azo dyes prepared by diazotising and coupling

Definition statement

This subclass/group covers:

Generally documents disclosing dyes which can not be classified in the

foregoing groups [C09B 29/00](#) until [C09B 37/00](#).

For instance the reaction product of at least one diazonium salt with a carbon black will be introduced in [C09B 39/00](#) (here a diazo compound is coupled on the solid surface of a carbon black particle); as an other example, obtaining tanning dyestuffs by coupling a diazotised aromatic compound with a water-soluble tanning agent and reacting the product with a heavy-metal salt is classified here as well; [further illustrations can be derived from documents present in this group].

Special rules of classification within this group

Note(s): In these main groups (Azo dyes [C09B 29/00](#) to [C09B 39/00](#)) and related sub groups, arrows in the formulae of the various types of azo dyes indicate which part of an azo dye, prepared by diazotising and coupling, is derived from the diazo component and which part is derived from the coupling component. The arrow is pointing to the part derived from the coupling component.

C09B 41/00

Special methods of performing the coupling reaction [N: reaction of mixtures of diazo and coupling components, C09B67/0033]

Definition statement

This subclass/group covers:

Coupling reactions e.g. carried out in specific solvents, in the presents of specific reaction assistents [e.g. urea, dispersing agents etc.]; automatically controlled processes, stepwise coupling, the help of mechanical resp. physical means are covered here as well.

C09B 43/00

Preparation of azo dyes from other azo compounds

Definition statement

This subclass/group covers:

Here the azo dye as produced is generally included already basically in the starting product; e.g. functional groups attached in the starting dye could be transfered into other functional groups leading to the final product [acylation of amino groups, acylation of hydroxyl groups etc.].

C09B 44/00

Azo dyes containing onium groups

Definition statement

This subclass/group covers:

To the dye e.g. ammonium, phosphonium, sulfonium or other 'onium' groups (see examples below) are covalently attached:

Special rules of classification within this group

Further details of subgroups:

[C09B 44/005](#)

[N: Special process features in the quaternization reaction]

e.g. by treating an aromatic heterocycle which contains at least one nitrogen atom with an alkylating agent or e.g. by treating a benzothiazole azo compound with a dialkylsulfate or by a reaction below:

[C09B 44/02](#)

containing ammonium groups not directly attached to an azo group

[C09B 44/04](#)

from coupling components containing amino as the only directing group

[C09B 44/06](#)

from coupling components containing hydroxyl as the only directing group

[C09B 44/08](#)

from coupling components containing heterocyclic rings

[C09B 44/10](#)

containing cyclammonium groups attached to an azo group by a carbon atom of the ring system

[C09B 44/106](#)

[N: derived from pyrazoles (left), pyrazolones (right)]

[C09B 44/12](#)

having one nitrogen atom as the only ring hetero atom

[C09B 44/14](#)

1, 2-Diazoles or hydrogenated 1,2-diazoles [N: Pyrazolium; Indazolium]

3-Diazoles

[C09B 44/16](#)

1, 3-Diazoles or hydrogenated 1,3-diazoles [N: (Benz)imidazolium]

[C09B 44/18](#)

having three nitrogen atoms as the only ring hetero atoms

[C09B 44/20](#)

Thiazoles or hydrogenated thiazoles

C09B 45/00

Complex metal compounds of azo dyes

Definition statement

This subclass/group covers:

Here the azo dye functions as a ligand linked to a metal cation in a

coordinative nature. Thereby the electron donating group in the dye can be the azo group, a hydroxyl group or an acid group (e.g. COO-) etc..

Special rules of classification within this group

The sub-groups [C09B 45/04](#), [C09B 45/14](#) and [C09B 45/24](#) cover documents where the metal can vary, in this case don't use the respective lower sub-groups (e.g. [C09B 45/06](#), [C09B 45/08](#), [C09B 45/10](#)). The sub-groups [C09B 45/12](#), [C09B 45/22](#) and [C09B 45/32](#) should contain documents where the metal is not Cr, Cu or Co, i.e. for example Ni or Fe (maybe both together also).

A typical monoazo dye-metal complex is shown below:

Further details of subgroups:

[C09B 45/01](#)

Preparation from dyes containing ortho-position hydroxyl group and ortho'-position hydroxyl, alkoxy, carboxyl, amino or keto groups

[C09B 45/02](#)

[e.g. the dye below could be a possible ligand for metallisation]

[C09B 45/16](#)

containing chromium

[C09B 45/18](#)

containing copper

[C09B 45/20](#)

containing cobalt

[C09B 45/22](#)

containing other metals

[C09B 45/24](#)

Disazo or poly azo compounds

[C09B 45/26](#)

containing chromium

[C09B 45/28](#)

containing copper

[C09B 45/30](#)

containing cobalt

[C09B 45/32](#)

containing other metals

[C09B 45/34](#)

Preparation from o-monohydroxy azo compounds having in the o-position an atom or functional group other than hydroxyl,alkoxy,carboxyl,amino or keto groups

[C09B 45/40](#)

containing chromium

[C09B 45/42](#)

containing copper

[C09B 45/44](#)

containing cobalt

[C09B 45/46](#)

containing other metals

C09B 47/00

**Porphines; Azaporphines [N: non-dyeing compounds
C07D487/22]**

Definition statement

This subclass/group covers:

Illustrative example of subject matter classified in this group.

Special rules of classification within this group

In case the preparation process of the disclosed phthalocyanine resp. naphthalocyanine is not described, all possible synthesis processes should be classified

Further details of subgroups:

[C09B 47/04](#)

Phthalocyanines [N:abbreviation :Pc]

also enclosed are naphthalocyanines, azaphthalocyanines and subphthalocyanines (see formulas below)

[C09B 47/10](#)

Obtaining compounds having halogen atoms directly bound to the

phthalocyanine skeleton

[C09B 47/12](#)

Obtaining compounds having alkyl radicals, or alkyl radicals substituted by hetero atoms, bound to the phthalocyanine skeleton

[C09B 47/14](#)

having alkyl radicals substituted by halogen atoms

[C09B 47/16](#)

having alkyl radicals substituted by nitrogen atoms

[C09B 47/18](#)

Obtaining compounds having oxygen atoms directly bound to the phthalocyanine skeleton

[C09B 47/20](#)

Preparation from isoindolenines, [N:e.g.pyrrolenines]

[C09B 47/22](#)

Obtaining compounds having sulfur atoms directly bound to the phthalocyanine skeleton

[C09B 47/24](#)

Obtaining compounds having sulfur atoms directly bound to the phthalocyanine skeleton

[C09B 47/26](#)

Obtaining compounds having nitrogen atoms directly bound to the phthalocyanine skeleton

[C09B 47/28](#)

[C09B 47/30](#)

C09B 48/00

Quinacridones

Definition statement

This subclass/group covers:

Illustrative example of subject matter classified in this group.

C09B 49/00

Sulfur Dyes

Definition statement

This subclass/group covers:

Dyes/Colorants obtained by heating a variety of organic compounds with sulfur or alkali polysulfides. Also colorants bearing a disulfid bridge (-S-S-) or a terminal thiol group (or derivatives thereof) might be classified here.

C09B 50/00

Formazane dyes; Tetrazolium dyes

Definition statement

This subclass/group covers:

Formazane dyes (left);Tetrazolium dyes (right)

The two structures above are merely examples of the two dye classes covered by [C09B 50/00](#) and sub groups; generally, formazane dyes comprise the basic structure as shown below, left, thereby tetrazolium dyes (below, right) show a heterocyclic ring comprising four N-atoms:

A few documents classified in [C09B 50/00](#) disclose the transfer of the (watersoluble) tetrazolium precursor into its (water insoluble) formazanone derivative (see scheme below):

Special rules of classification within this group

Further details of subgroups:

[C09B 50/02](#)

Tetrazolium dyes:

[C09B 50/04](#)

Metal-free Formazane dyes:

[C09B 50/06](#)

Bis-formazan dyes

[C09B 50/08](#)

Meso-acylformazan dyes

[C09B 50/10](#)

Cationic formazan dyes

C09B 51/00

Nitro or nitroso dyes

Definition statement

This subclass/group covers:

Illustrative example of subject matter classified in this group.

C09B 53/00

Quinone imides

Definition statement

This subclass/group covers:

Special rules of classification within this group

Further details of subgroups:

[C09B 53/02](#)

Indamines;Indophenols

C09B 55/00

Azomethine dyes

Definition statement

This subclass/group covers:

Illustrative example of subject matter classified in this group.

Special rules of classification within this group

Further details of subgroups:

[C09B 55/009](#)

C09B 56/00

Azo dyes containing other chromophoric systems

Definition statement

This subclass/group covers:

The dyes classified here show an azo-type chromophore which is covalently linked (in most cases by a common chemical linker) to a chromophore being of a different nature than the azo-type; examples might be here: azo - [chemical linker] - anthraquinone or azo - [chemical linker] - phthalocyanine etc.

Special rules of classification within this group

Further details of subgroups:

[C09B 56/005](#)

[N: Azo-nitro dyes]

thereby, the following structure should be put into [C09B 29/081](#):

[C09B 56/02](#)

Azomethine-azo dyes [N: 1,2-Complex dyes of AZOMETHINE and AZO dyes,

[C09B 55/001](#)]

[C09B 56/04](#)

Stilbene-azo dyes [N: disazo dyes from diaminostilbene, [C09B 35/215](#)]

[C09B 56/06](#)

Stilbene-azo dyes [N: disazo dyes from diaminostilbene, [C09B 35/215](#)]

[C09B 56/08](#)

Styryl-azo dyes

[C09B 56/10](#)

Formazane-azo dyes

[C09B 56/12](#)

Anthraquinone-azo dyes [N: from diazotised amino anthracene [C09B 29/0022](#), azo dyes containing hydroxyl groups acylated with polyfunctional anthraquinone derivatives [C09B 43/26](#)]

[C09B 56/14](#)

Phthalocyanine-azo dyes

[C09B 56/16](#)

Methine- or polymethine-azo dyes

[C09B 56/18](#)

Hydrazone-azo dyes, e.g.

[C09B 56/20](#)

Triazene-azo dyes

C09B 57/00

Other synthetic dyes of known constitution

Definition statement

This subclass/group covers:

Documents dealing with colorants not belonging to the groups [C09B 1/00](#) until [C09B 56/00](#).

Special rules of classification within this group

See here also the main group [C09B 59/00](#)

Further details of subgroups:

[C09B 57/001](#)

[N: Pyrene dyes]

[C09B 57/002](#)

[N: Aminoketone dyes, e.g. arylaminoketone dyes ([C09B 13/00](#) takes precedence)]

[C09B 57/004](#)

[N: Diketo-pyrrolo-pyrrole dyes]

[C09B 57/005](#)

N: Pyrocolline; Phthalcoylpyrrocolline dyes

[C09B 57/007](#)

[C09B 57/008](#)

[N: Triarylamine dyes containing no other chromophores] [N1006]

[C09B 57/02](#)

Coumarine dyes

[C09B 57/04](#)

Isoindoline dyes

[C09B 57/06](#)

Naphtholactam dyes

[C09B 57/08](#)

Naphthalimide dyes; Phthalimide dyes

[C09B 57/10](#)

Metal complexes of organic compounds not being dyes in uncomplexed form in the formula below, the ligand itself is not coloured, the complex as such is coloured

C09B 59/00

Artificial dyes of unknown constitution

Definition Statement

This subclass/group covers:

In some cases it is not possible to analyse a well defined chemical structure of

a dye or pigment. To this class of dyes belong e.g. the nigrosine dyes (a mixture of benzo-quinoxaline type chromophores), melanin-type colorants, some aniline condensed dyes, some vat dyes etc. Documents dealing with such colorant matters should be classified herein.

Special rules of classification within this group

See here also the main group [C09B 57/00](#)

C09B 61/00

Dyes of natural origin prepared from natural sources, [N: e.g. vegetable sources]

Definition Statement

This subclass/group covers:

Dyes resp. pigments of natural origin being found e.g. in plants or animals (e.g. madder, brazilwood, logwood, weld, woad, indigo etc). Some natural dyes, such as cochineal, come from insects, or from mineral sources; they have to be isolated from the natural materials by common techniques like crushing, extracting, boiling with certain solvents, filtering, to mention only a few techniques. Documents dealing with those colorants should be classified here.

C09B 62/00

Reactive dyes, i.e. dyes which form covalent bonds with the substrates or which polymerise with themselves

Definition Statement

This subclass/group covers:

A reactive dye comprises a [HYPERLINK "http://en.wikipedia.org/wiki/Chromophore"](http://en.wikipedia.org/wiki/Chromophore) \o "Chromophore" chromophore as the color giving moiety and a [HYPERLINK "http://en.wikipedia.org/wiki/Substituent"](http://en.wikipedia.org/wiki/Substituent) \o "Substituent" substituent which is suitable to [HYPERLINK "http://en.wikipedia.org/wiki/Chemical_reaction"](http://en.wikipedia.org/wiki/Chemical_reaction) \o "Chemical reaction" react directly with functional groups of the substrate to be coloured or printed. Such reactive dyes normally have good fastness properties, especially washing, wet or sweat fastnesses; most commonly they are used in dyeing of cellulose materials like cotton or flax, but also wool is dyeable with reactive dyes. Documents dealing with such reactive dyes should be classified here.

Special rules of classification within this group

Further details of subgroups:

[C09B 62/4401](#)

[N: with two or more reactive groups at least one of them being directly attached to a heterocyclic system and at least one of them being directly attached to a non-heterocyclic system]

[C09B 62/465](#)

the reactive group being an acryloyl group, a quaternised or non-quaternised aminoalkyl carbonyl group or a $(-N)_n\text{-CO-A-O-X}$ or $(-N)_n\text{-CO-A-Hal}$ group, wherein

A is an alkylene or alkylidene group, X is hydrogen or an acyl radical of an organic

or inorganic acid, Hal is a halogen atom, and n is 0 or 1

[C09B 62/503](#)

the reactive group being an esterified or non-esterified hydroxyalkyl sulfonyl or mercaptoalkyl sulfonyl group, a quaternised or non-quaternised aminoalkyl sulfonyl group, a heterylmercapto alkyl sulfonyl group, a vinyl sulfonyl or a substituted vinyl sulfonyl group, or a thiophene-dioxide group;

examples for reactive dyes with a vinyl sulfonyl group or a esterified hydroxyalkyl sulfonyl group (sulfatoethyl) see below:

[C09B 62/517](#)

Porphines; Azaporphines [N: ([C09B 62/5033](#), [C09B 62/5036](#) take precedence)]

[C09B 62/523](#)

the reactive group being an esterified or non-esterified hydroxyalkyl sulfonyl amido or hydroxyalkyl amino sulfonyl group, a quaternised or non-quaternised amino alkyl sulfonyl amido group, or a substituted alkyl amino sulfonyl group, or a halogen alkyl sulfonyl amido or halogen alkyl amino sulfonyl group or a vinyl sulfonylamido or a substituted vinyl sulfonamido group

[C09B 62/62](#)

the reactive group being an ethylenimino or N-acylated ethylenimino group or a -CO-NH-CH₂-CH₂-X group, wherein X is a halogen atom, a quaternary ammonium group or O-acyl and acyl is derived from an organic or inorganic acid, or a beta-substituted ethylamine group

C09B 63/00

Lakes

Definition statement

This subclass/group covers:

Lakes might be e.g. pigments manufactured by precipitating a dye with an inert binder or dyes made immobilised by e.g. adsorbing it on silica surfaces or concrete

Special rules of classification within this group

Further details of subgroups:

[C09B 63/005](#)

Metal lakes of dyes; e.g. azo dyes with SO₃H groups made insoluble by salting out with cations of alkaline earth metals like Ca²⁺, Mg²⁺ or also Al³⁺; metal complexes of azo dyes see main group [C09B 45/00](#) and sub groups; complexes of metals with ligands being colourless in uncomplexed form see [C09B 57/10](#)

C09B 65/00

Compositions containing mordants (preparation of the mordant compounds C01, C07)

Definition statement

This subclass/group covers:

Compositions containing mordants; thereby dyes are reacted with so-called

mordants; mordants are in most cases metal salts already comprised in the material to be colored (textiles, fibres etc.) by pre-treatment; the dyes build complexes with these metals and are by this way fixed to the material

C09B 67/00

Influencing the physical, e.g. the dyeing or printing properties of dyestuffs without chemical reactions, e.g. by treating with solvents [N: grinding or grinding assistants, coating of pigments or dyes]; Process features in the making of dyestuff preparations; Dyestuff preparations of a special physical nature, e.g. tablets, films

Definition statement

This subclass/group covers:

Post-treatment of organic pigments, crystal modifications thereof, their preparation, blends of dyes and pigments, process features in the making of dyestuff/pigment preparations; solution of dyes/pigments; dispersions of dyes/pigments; dyes in solid form; purification, precipitation, filtration of dyes/pigments; dye/pigment preparation of special physical nature; organic pigments exhibiting interference colours (e.g. nacrous pigments). [C09B 67/00](#) does generally not enclose the chemical modification of pigments (see here: [C09B 68/00](#) and sub groups)

Special rules of classification within this group

Further details of subgroups:

[C09B 67/0001](#)

After the synthesis the obtained organic pigment, the so-called raw-pigment does not have sufficient pigment properties (e.g. with view to colour strength, average particle size, dispersibility, crystal modification etc.) to be applied to a material. Therefore further conditioning of the pigment is necessary, which can consist of milling, solvent treatment, acid treatment, tempering, combining with dispersants etc. and combinations thereof. Such conditioning processes ('post-treatment') are a major part of the this subgroup [C09B 67/0001](#).

[C09B 67/0096](#)

e.g. membran processes like ultra-,micro-,nano- filtration; ultra-centrifugation; solvent extraction; combining precipitation and dissolution steps etc., for instance carried out in microreactors

C09B 68/00

[N: Organic pigments surface-modified by grafting, e.g. by

establishing covalent or complex bonds, in order to improve the pigment properties, e.g. dispersibility or rheology]

Definition statement

This subclass/group covers:

Illustrative example of subject matter classified in this group.

This drawing illustrates e.g. the covalent attachment of a chemical group (might be an alkylene chain) with a terminal negative charge (might be an anionic SO₃⁻ group) to the surface of a pigment, e.g. to improve dispersibility. The organic pigment particle is here represented by the ring at the right.

Special rules of classification within this group

In this main group, in order to emphasise the difference to the main group [C09B 67/00](#), which deals with the treatment of dyes/pigments without chemical reactions, the surface modification of pigments with chemical reactions is covered here.

Thereby in the sub groups of [C09B 68/20](#) until [C09B 68/28](#) the point of view is focussed on the kind of the treating process (e.g. oxidation, azo-coupling etc.), thereby the chemical nature of the introduced/attached groups (e.g. ionic, non-ionic, cyclic, aromatic etc.) is treated in the sub groups [C09B 68/40](#) until [C09B 68/485](#).

C09B 69/00

Dyes not provided for by a single group of this subclass

Definition statement

This subclass/group covers:

All dyes not falling under the preceding main groups

Special rules of classification within this group

Further details of subgroups:

[C09B 69/008](#)

Dyes containing a substituent, which contains a silicium atom (see formula below):

this sub group takes precedence vis à vis the sub group for the chromophore at which the Si-containing substituent is attached (here: [C09B 5/002](#))

[C09B 69/10](#)

This sub group covers the following compounds:

- 1) Polymers with at least one chromophoric system covalently linked to the polymer chain (could be attached as a pending group in the middle of the chain or as a terminal group at its end)
- 2) Polymers which comprise a chromophoric system as a monomer being part of the chain.

In case a polymeric polyalkylene oxid chain (e.g. -CH₂CH₂O- or -CH₂CH₂CH₂O-) is linked to a dye chromophore, please put the document into the group [C09B 69/00](#), as already indicated in this subgroup [C09B 69/10](#).
