588	Marine vehicles	625	.Plural servomotors
589	Submarine and torpedo systems	626	.Limit or end-stop control
590	.Multiple mode systems	627	Secto-scanning systems
591	With mode-engagement features	628	."Feelback" systems
	(e.g., manual to automatic)	629	.Unwanted harmonic or voltage
592	Fine and coarse systems		component elimination
593	Separate fine and coarse		quadrature rejection systems
	motors	630	.Antibacklash systems (e.g., with
594	Digital systems		unidirectional approach to
595	Multiple speed synchro systems		balance)
596	Combined "on-off" and	631	.Antistatic friction features
	proportional control		(e.g., "dither" voltage)
597	Slewing systems	632	.With compensating features
598	With a separate slewing motor	633	"Two-cycle error" compensation
599	.Pulse-width modulated power	634	Temperature compensation
	input to motor (e.g., "duty	635	.With signal-, voltage-, or
	cycle" systems)		current-limiting
600	.Digital or numerical systems	636	."Sampling" systems including
601	Digital comparison		miscellaneous "sampled data"
602	Commutating switch-type		control systems
002	encoder	637	.Analog computation
603	Pulse-counting systems	638	.With particular "error-
604	Analogue comparison		detecting" means
605	Synchro or resolver (e.g.,	639	Plural, diverse conditions
003	transmitter simulators)	640	Photoelectric or optical-type
606	.Frequency- or phase-modulated	0 1 0	measuring instruments
000	systems	641	With particular temperature
607	Frequency comparison	011	measuring instrument
608	Phase comparison	642	With liquid level measuring
609		042	instruments
610	."Reset" systems (P.I.)	643	With moisture content or
010	With rate (P. I. D.) (e.g.,	043	wetness measuring instruments
611	reset windup prevention)	644	With flow measuring instruments
011	.With stabilizing features (e.g.,	645	With fluid pressure measuring
C10	anti-hunting, damping)	043	instruments
612	Electric braking near balance	646	With force or weight measuring
64.2	(e.g., dynamic)	040	instruments
613	D.C. in A.C. windings	647	With magnetic field measuring
614	Friction-braking near balance	047	
	including magnetic or eddy	648	instruments
64.5	current brakes	040	With inertial, direction or inclination measuring
615	By auxiliary feedback loop		instrument
616	Rate feedback	649	
617	Variable rate feedback		Stable platforms
618	Tachometer feedback	650	With current, voltage or
619	Variable gain bandwidth		electrical power measuring instruments
620	Nonlinear circuits	CE 1	
621	Lead or lag networks	651	With acceleration measuring
622	A.C. networks	CEO	instruments
623	Load stabilization (e.g.,	652	With particular position
	viscous, magnetic or friction	C E 2	measuring instruments
	dampers)	653	Magnetic transducers
624	By deadband at null (e.g.,	654	Synchro control transmitter-
	threshold circuits)	CEE	transformer systems
		655	With synchro differential

656	Differential transformer	692	.Having induction or "selsyn"
CET	systems	C 02	type transmitter
657	Linear differential transformer	693	.Having impedance-type transmitter
658	"E" type transformer	694	.Having commutated dynamoelectric
659	"Microsyn" type		machine transmitter
660	"Inductosyn" systems	695	.Having commutating switch-type
661	Resolver systems		transmitter
662	Variable capacitor systems	696	OPEN-LOOP STEPPING MOTOR CONTROL
663	Potentiometer systems		SYSTEMS
	including autotransformers and	34	PLURAL, DIVERSE OR DIVERSELY
	Wheatstone bridges		CONTROLLED ELECTRIC MOTORS
664	Minor arc seeking	35	.Motors with diverse motions
665	Continuous rotation,		(e.g., reciprocating and
	unlimited range		rotary motors)
666	Controlled tap and slidewire	37	.Plural reciprocating or
667	With a bridge in the feedback		oscillating motors
	circuit	38	.Plural linear-movement motors
668	Recalibrating systems	39	.Work and feed motors (e.g.,
669	Standing wave		indexing)
670	Contact resistance	40	.Motor biased against rotation
671	.With particular motor control	41	.Having electrical synchronizing
	system responsive to the		interconnections
	"actuating signal"	42	Between windings on auxiliary
672	Discontinuous or "on-off"		dynamo-electric machines
	control	43	D.C. or A.C. commutator motors
673	Seeking switch type		with slip rings
674	Wheatstone bridge type	44	Between induction motor
675	One transmitter or controller		secondaries
	element follows another	45	.Mechanically coupled in fixed
676	Transmitter or controller		ratio of movement
	element returned (e.g., force	46	Motors having unlike operating
	balance systems)		characteristics
677	With particular servoamplifier	47	\ldots Synchronous and nonsynchronous
678	Differential amplifier		motors
679	Diverse types of amplifiers in	48	Mechanically coupled in torque
	different stage		opposition
680	Magnetic servoamplifiers	49	.Motors electrically connected in
681	Solid-state servoamplifiers		cascade or tandem
682	Rotating amplifier (e.g.,	50	With means for effecting other
	"Ward Leonard" control)		motor interconnections
683	With particular phase	51	.Plural, diverse motor controls
	discriminator		for different motors
684	With particular modulator or	52	.Slipping and/or racing control
	detector (e.g., choppers)		for electric motors
685	"Step-by-step" motors in	53	.Plural, diverse motor controls
	closed-loop servos	54	Motor-reversing
686	Reciprocating or oscillating	55	With running-speed control
	motors	56	And braking
687	Linear movement motors	57	And braking
688	Shaded pole motors	58	And acceleration control
689	TORQUING MOTORS	59	Running-speed control
690	SELF-SYNCHRONOUS TYPE OF MOTOR	60	And braking
691	.With means to amplify	61	And acceleration control
	transmitter signals		

62	And automatic starting and/or	92	Control of both armature (or
	stopping and/or with time		primary) and field (or
	delay		secondary) circuits
63	Braking	93	Series-parallel connected
64	Acceleration control		armature or primary circuits
65	.Motor-reversing	94	Armature or primary circuit
66	.Running-speed control	J 1	control
		95	
67	Diverse speeds for different		Series-parallel connections
	motors	96	With armature circuit
68	Relative motor speed control		impedance
69	With speed-difference detector	97	Field or secondary circuit
70	Electrical-type detectors		control
71	Voltage and/or current	98	.Load control
	difference detector	99	Fixed ratio of load or current
72	Dynamoelectric machine		division
	detector	100	By field or secondary circuit
73	Synchronously operated		control
	impedance detectors	101	.Starting and/or stopping
74	Synchronously actuated	102	Sequential or successive
7 -	switch detectors	102	starting and/or stopping
75	Plural switches connected	103	Selective starting and/or
13		105	5
	in series	104	stopping
76	Differential-gearing detector	104	Armature (or primary) circuit
77	Controlling motor speed in	405	control
	response to speed of another	105	.Plural, diverse or diversely
	motor		controlled sources of armature
78	Controlling A.C. frequency or		(or primary) supply
	rate of electrical impulses to	106	Diverse sources
	other motor	107	A.C. and D.C.
79	Control of both armature (or	108	Different voltages
	primary) and field (or	109	Different voltages
	secondary) circuits	110	Different frequencies
80	Armature or primary circuit	111	.Series-parallel connected motors
	control	112	.Parallel connected motors
81	Field secondary circuit	113	.Series connected motors
0.1	control	114	
82	Armature or primary circuit	114	IMPACT, MECHANICAL SHOCK, OR VIBRATION-PRODUCING MOTORS
02	control	115	
83	Series-parallel armature	115	MOTOR WITH DIVERSE MOTIONS (E.G.,
03		446	ROTARY AND RECIPROCATING)
0.4	circuit connections	116	NONMAGNETIC MOTOR
84	Field or secondary circuit	117	.Thermoelectric motor
	control	118	MAGNETOSTRICTIVE MOTOR
85	.Synchronizing or phasing control	119	RECIPROCATING OR OSCILLATING
86	.Braking		MOTOR
87	Motor used as braking generator	120	.Stopping after predetermined
	(dynamic braking)		number of reciprocations or
88	Load or current division		cycles (including single
	during braking		cycle)
89	Motor as exciter for another	121	.Having means to produce a
	motor		progressing or traveling motor
90	.Acceleration control		field flux
91	Accelerating motors in	122	.Plural, diverse or diversely
<i>J</i> ±	succession or selectively	144	controlled motor windings
	paccepaton of pereceivery		concrotica motor windings

123	Polyphase or diverse or diversely controlled sources	150	.With flywheel on generator or on motor
124	of motor supplyA.C. and D.C. sources	151	.Control of both the generator and the circuit to the motor
125	Unidirectionally conductive	152	With motor control
	devices in energizing circuit	153	.Control of both the generator
126	.Energizing winding circuit		and the motor
	control	154	Control of excitation (field)
127	Automatic in response to	101	circuit of both
	predetermined position,	156	.Plural, diverse or diversely
	movement or condition in or of	100	actuated, generator control
	the motor or driven device		means
128	Noise, sound, vibration,	157	.Generator speed control
	movement or position of motor	158	.Generator field circuit control
129	By means for producing periodic	159	HAVING ROTOR ELEMENT BIASED
	electrical pulses in the		AGAINST ROTATION
	energizing circuit	160	.By resilient biasing means
130	Electrical oscillation or		(e.g., spring)
	condenser charging and/or	161	WITH FLYWHEEL OR MASSIVE ROTARY
	discharging circuits		MEMBER
131	Motor or escapement-controlled	162	CONTROL BY PATTERNS OR OTHER
	means		PREDETERMINED SCHEDULE MEANS
132	By space-discharge or	163	.Motor running-speed control
	unidirectionally conductive	164	Cyclically varying or repeated
	devices in energizing circuit		speed schedules
133	By impedance devices in	700	SYNCHRONOUS MOTOR SYSTEMS
	energizing circuit	400.01	.Brushless motor closed-loop
134	By circuit making and/or		control
	braking devices	400.02	Vector control (e.g., dq-axis
135	LINEAR-MOVEMENT MOTORS		control, 3-2 phase conversion,
136	AUXILIARY MEANS FOR PRODUCING		etc.)
	MECHANICAL STARTING OR	400.03	Plural reference comparison
137	ACCELERATING TORQUE		(e.g., reference changes
137	.By auxiliary motor BATTERY-FED MOTOR SYSTEMS		during startup, upper/lower
140	GENERATOR-FED MOTOR SYSTEMS	400 04	reference, etc.)
140	HAVING GENERATOR CONTROL	400.04	Specific processing of feedback
141	.Automatic generator control and/		signal or circuit therefore
T.4.T	or with time-delay means		(i.e., A-D conversion,
142	Responsive to diverse	400.05	compression, or modification)With reference signal
142	conditions or with time-delay	400.03	generation (e.g., from
	means		external system, mechanical
143	Plural electrical conditions		oscillator, etc.)
144	Armature or primary current of	400.06	Comparator circuit or method
	motor	400.07	Plural diverse feedback (e.g.,
145	Terminal voltage or counter		torque and speed, load and
	e.m.f. of motor		speed, etc.)
146	Speed of motor or driven device	400.08	With nonmotor parameter or
147	Speed or frequency of generator		remote condition detected
	or its drive means		(e.g., temperature, light,
148	.Alternating-current-motor system		airflow, position of diverse
149	.With plural, diverse or		object, etc.)
	diversely controlled		
	generators		

400.42	.Brushless motor open-loop control	733	Commutator connected to secondary winding
701	.Hysteresis or reluctance motor	734	Slip rings connected to
F.00	systems	5 25	secondary winding
702	.Antihunting or damping	735	Rotor shaft coupled to
703	.Braking		dynamoelectric machine
704	.Pole changing motor winding circuits	736	Slip rings connected to dynamoelectric machine winding
705	.Synchronization systems	737	.Self-cascaded motor windings
706	With armature power removal	738	.With commutated winding
700	-		3
	upon failure to synchronize or	739	Reversing
	loss of synchronism	740	With diverse motor operation
707	Upon failure to resynchronize	741	With braking
708	Responsive to thermal	742	Electromagnetic brakes
	electrical element in system	743	Generator action
709	Having different armature	744	Plugging
	voltage prior to synchronism	745	With controlled saturable
710	With d.c. field removal	. = -	reactor in primary circuit
711	With electronic control	746	Two phase motor
/	element in system	747	-
712	With field excitation		Two phase motor
112		748	With plural primary windings
54.0	application		or winding portions having
713	Responsive to slip voltage		common connection
	frequency in d.c. field	749	Operating from a single phase
	winding		source
714	Responsive to armature current	750	Shaded pole motor
715	Responsive to rotor speed or	751	Split phase motor with
	rotor driven member		capacitor interchangeably
716	.Field winding circuits		connected in series with
717	Responsive to a motor condition		either primary winding
718	Induced voltage in field	752	With controlled electronic
	winding	732	device to provide the series
719	Speed responsive field power		connection
	sources	753	With de-energizable start
720	.Armature winding circuits		winding
721	Responsive to rotor shaft	754	With separate winding or
	position or speed		winding portion energized for
722	Having electronic power		each direction of rotation
, 22	conversion circuit	755	Automatic current reversal on
723		, 33	start winding
123	Having variable frequency	756	With controlled electronic
50.4	supply	750	
724	Having a plurality of windings		switch for phase reversal
	or winding portions	757	.Braking
725	REPULSION MOTOR SYSTEMS	758	With diverse operation
726	.With added motor winding or	759	Dynamic braking
	convertible to series motor	760	Direct current primary winding
727	INDUCTION MOTOR SYSTEMS		braking circuit
728	.Repulsion start	761	Rotating rotor controls
729	.Power-factor control		braking current in primary
730	.With plural separately movable		winding
	rotors	762	With a.c. to d.c. conversion
731			circuit
121	.With voltage source connected to	763	Reversal of power to primary
720	motor secondary	103	winding
732	. Electronic device controls	764	3
	current in secondary circuit	/04	Three phase power reversal

765	Eddy current braking circuits	795	With plural capacitors
766	.Primary and secondary circuits	796	Saturable winding in
767	.Primary circuit control		capacitor run motor circuit
768	Three phase motor operated from	797	Phase splitting using stator
	single phase source		winding mutual inductance or
769	With dynamoelectric converter		saturable winding
770	Dual voltage motors	798	Responsive to motor condition
771	Delta-wye, plural wye, or	799	Responsive to speed or
	plural delta connected primary	0.00	rotation phase angle
	windings	800	With controlled power
772	Plural speed	0.01	conversion
773	Pole changing	801	Including inverter
774	Single phase motor	802	Responsive to an additional
775	Separate primary running	0.00	condition
	winding for each pole number,	803	With controlled a.c. to
BB 6	alternately energized		d.c. circuit in inverter
776	Entire primary running	0.0.4	supply
	winding energized for each	804	With controlled magnetic
777	running speed	805	reactance
111	Separate primary running	806	Responsive to motor voltageCondition responsive
	winding for each pole number,	806	-
778	alternately energizedStarting control		Frequency control
778 779	With speed control	808	With voltage magnitude control
780	Three phase motor with	809	With voltage phase angle control
700	variable transformer to	810	
	initially adjust voltage to	010	With voltage pulse time control
	motor windings	811	Pluse width modulation or
781	Operating from a single phase	011	chopping
701	source	812	Voltage control
782	With protective features	813	With transformer
783	Thermal starting and thermal	814	With impedance control
703	overload protection	815	Saturable reactor
784	Impedance for reducing	816	Single phase, split phase
	current during starting	010	motors
	operation	817	With capacitor
785	Start winding removed during	818	with capacitor .Secondary circuit control
	running operation	819	Open secondary member or
786	By electronic switch	019	portion thereof with means to
787	With transformer for		open or close the circuit
	sensing the run winding		thereto
	current	820	Closed secondary member or
788	With variable temperature	020	member portion with means to
	coefficient resistor in switch		change electrical
	control circuit		characteristics thereof
789	By electromagnetic switch	821	Impedance control of secondary
790	With relay coil in series		circuit
	with main winding	822	Responsive to motor condition
791	By thermal switch	823	Rotor speed or position
792	With variable temperature		responsive
	coefficient impedance element	824	Centrifugal force of rotor
793	By centrifugal switch		controls secondary circuit
794	Capacitor run motor with		impedance
	different capacitance at	825	Induction motor current
	starting	826	Primary motor current

827	Frequency of secondary current	272	With automatic starting and/or stopping
828	Secondary voltage	273	.Motor braking
829	By manual operation	274	With acceleration control
830	.With relatively movable cooperating motor parts to	275	With automatic starting and/or stopping
	control energized motor	276	.Acceleration control
831	Axially movable cooperating parts	277	With automatic starting and/or stopping
832	Dual stators, one or both angularly movable	278	In response to an electrical condition
244	ALTERNATING CURRENT COMMUTATING	279	Automatic stopping means less
	MOTORS		responsive during acceleration
245	.Universal or A.CD.C. motors	280	MOTOR-REVERSING
246	SERIES MOTORS	281	.Periodic- or intermittent-
247	.Convertible for nonseries motor		reversing
	operation	282	In response to movement or
248	.With plural, diverse or diversely connected or controlled sources of e.m.f.		<pre>position (e.g., limit of travel) of motor or driven device</pre>
249		283	
249	.Control by motor circuit impedance	203	.Automatic and/or with time-delay means
250	Impedance in series with field	284	With means to delay reversing
230	windings and in parallel to	204	until motor substantially
	armature winding		stops
251	.Field circuit control	285	Instant of, or passage or
252	Plural, diverse or diversely	203	predetermined time or having
	connected or controlled field		time-delay means
			cinc aciay means
253	coils	286	Movement or position of motor
253 254.1	coils HOMOPOLAR OR UNIFORM FIELD MOTORS		Movement or position of motor or driven device
253 254.1	coils	286 287	Movement or position of motor
	COILS HOMOPOLAR OR UNIFORM FIELD MOTORS SWITCHED RELUCTANCE MOTOR COMMUTATION CONTROL		Movement or position of motor or driven device.Armature or primary circuit control
254.1 254.2	COILS HOMOPOLAR OR UNIFORM FIELD MOTORS SWITCHED RELUCTANCE MOTOR	287	Movement or position of motor or driven device.Armature or primary circuit controlPlural, diverse or diversely
254.1 254.2 255	coils HOMOPOLAR OR UNIFORM FIELD MOTORS SWITCHED RELUCTANCE MOTOR COMMUTATION CONTROL .Having asymmetric half-bridge PLURAL DIVERSE MOTOR CONTROLS	287	Movement or position of motor or driven device.Armature or primary circuit control

Class 388 subclasses 800-841 are an integral part of this Class (Class 318), as shown by the position of this box, and follows the schedule hierarchy of this Class, retaining all pertinent definitions and Class lines of this class.

Class 388 subclasses 842-860 are an integral part of this Class (Class 318), as shown by the position of this box, and follows the schedule hierarchy of this Class, retaining all pertinent definitions and Class lines of this class.

362	BRAKING	430	MOTOR LOAD, ARMATURE CURRENT OR
363	."Spotting" or adjustment of		FORCE CONTROL DURING STARTING
	braking controller during		AND/OR STOPPING
	coasting	431	.Initial, "cracking" or "starting
364	.Automatic and/or with time-delay		from rest" torque control
	means	432	CONSTANT MOTOR CURRENT, LOAD AND/
365	Plural diverse conditions or		OR TORQUE CONTROL
	with time delay	433	.Control of motor load or device
366	Condition of motor or driven		driven
	device	434	LIMITATION OF MOTOR LOAD,
367	Armature or primary current		CURRENT, TORQUE OR FORCE
368	Armature or primary circuit	10.6	(E.G., PREVENTING OVERLOAD)
	voltage or terminal or counter	436	NONRUNNING, ENERGIZED MOTOR
	e.m.f. voltage	437	PHASING OR ANGULAR OR LINEAR
369	Speed, acceleration, movement		POSITIONAL CONTROL OF MOVABLE
	or position of motor or driven	420	ELEMENT OF THE MOTOR
250	device	438	POWER FACTOR CONTROL OF ARMATURE
370	.Plural, diverse or diversely	4.4.0	OR LINE CIRCUIT
271	controlled braking means	440	HAVING PLURAL, DIVERSE OR
371	Including both friction braking	4.4.1	DIVERSELY CONTROLLED SOURCES
	"plugging" and/or dynamic	441	.A.C. and D.C.
272	braking	442	.Different voltages
372	Friction braking	443	PERIODIC, REPETITIOUS OR
373	."Plugging" or application of		SUCCESSIVE OPERATIONS CONTROL
374	reverse power to motor		OF MOTOR, INCLUDING "JOG" AND "INCH" CONTROL
3/4	Energy flow interrupted when	444	.Variable periods or intervals
375	motor stops	444	between controlling operations
376	.Dynamic braking	445	AUTOMATIC AND/OR WITH TIME-DELAY
376	RegenerativeWith additional source of	443	MEANS (E.G., AUTOMATIC
311	e.m.f.		STARTING AND/OR STOPPING)
378	In series with armature or	446	.With nonautomatic control means
370	primary circuit		(e.g., manual)
379	Locally closed armature circuit	447	.Nonresponsive or less responsive
380	Closed through impedance or		for limited periods
300	the like	448	.Anti-hunting
381	With field or secondary	449	.With respect to a fixed
301	circuit control		standard, master or reference
382	.By auxiliary electric generator		device
302	or by magnetic attraction or	450	Electrical detector
	repulsion devices	451	Mechanically vibrating device
383	"ANTI-BRAKING" OR BRAKING-		as reference device (e.g.,
	PREVENTION MEANS		tuning fork)
		452	.Plural, diverse conditions or
			with time-delay means
		453	Electrical condition

454	Plural, diverse electrical	488	.Responsive to stress in body or
	conditions		material
455	Voltage and current (e.g.,	489	.Responsive to direction,
	watts)		inclination or angular
456	.Rate-of-change of a condition		position of bodies
457	Interia-type detector	490	WITH SIGNALS, METERS, RECORDERS
458	Electrical condition		OR TESTING DEVICES
459	.Terminal voltage or counter-	491	CONTROL OF BOTH MOTOR CIRCUIT AND
	electromotive force of		MOTOR STRUCTURE
	controlled motor	492	MOTOR MAGNETIC ENERGY DISSIPATION
460	.Sound, supersonic vibration or	493	CONTROL OF BOTH ARMATURE (OR
	mechanical vibration		PRIMARY) CIRCUIT AND FIELD (OR
461	.Speed or rate-of-movement		SECONDARY) CIRCUIT
462	Centrifugal-type detector	494	ARMATURE (OR PRIMARY) CIRCUIT
463	Tachometer-type detector		CONTROL
464	Electric generator tachometer	495	.Plural, diverse or diversely
465	In excess of a predetermined		controlled, armature or
403	valve		primary windings
466	.Movement, position, or limit-of-	496	Polyphase windings
400	travel	497	Series-parallel
467	Plural sensing means for	498	Energized or controlled in
407	9	400	predetermined sequence
	determining plural positions	499	Wound or energized in magnetic
4.00	or plural limits-of travelLimit-of-travel control means	ュンン	opposition
468		500	.Plural sources of voltage
469	Overloading limit-of-travel-	300	5
450	type control means		<pre>(including counter e.m.f. cells)</pre>
470	Magnitude of movement or	501	,
	revolutions	301	.By shunting armature or primary
471	.Responsive to thermal conditions	F00	winding
472	Of motor control means	502	.Variable length or tapped
473	In or about the motor being	E00	armature winding
	controlled	503	.Frequency or pulsation control
474	.Motor load, armature or primary	504	.Voltage control
	or secondary circuit current	505	.By means to space-discharge
475	Mechanical-type detector (e.g.,		devices
	by yielding spring devices)	506	Plural, diverse or diversely
476	In excess of a predetermined		connected or controlled space-
	magnitude		discharge devices
477	Intentionally increased load	507	Having discharge-control means
478	.Electrical conditions in circuit		(e.g., grids)
	other than controlled motor	508	.Impedance-controlled
	circuit	509	Plural, diverse or diversely
479	Voltage		controlled impedances
480	.Radiant energy	510	Including both reactor and
481	.Pressure in a fluid or granular		condenser
	material	511	Inherently or self-variable
482	.Level of fluid or granular		impedance
	material	512	Inductive reactor controlled
483	.Moisture content or wetness	513	Having auxiliary means for
484	.Time or with time-delay means		saturating reactor core
485	Dash-pot or other mechanical	514	Resistor-controlled
±00	delay means	515	Having short-circuiting means
486	Pilot- or servo-motors	516	Short-circuited step-by-step
		519	.By armature or primary circuit-
487	Electromagnetic or inductive	3 ± 3	making and/or breaking
	time-delay means		manifing and of Dicanting

520	Electromagnetically actuated	552	.Power-actuated controllers
521	FIELD OR SECONDARY CIRCUIT	553	Separately actuated controller
	CONTROL		contacts
523	.Plural, diverse or diversely	554	Electromagnetic actuated
	connected or controlled field	555	Electromagnetic actuated
	windings	556	Reciprocating or oscillating
524	Convertible number-of-poles	330	electromagnetic means
521	type (e.g., 4-pole or 6-pole)	557	-
525	Differentially wound or	337	Intermittent or step-by-step
J		F F O	operation
F 2 C	energized windings	558	MISCELLANEOUS
526	Series-parallel		
527	Series field winding		
528	With means to short circuit a		
	field winding	FOREIGN	ART COLLECTIONS
529	Selectively energized
