CASE IDENTIFIERS
Serial Number  90505914  Application Filing Date  Feb. 02, 2021  Registration Number  6589505
Registration Date  Dec. 14, 2021  Register  Principal  Mark Type  Service Mark  Publication Date  Sep. 28, 2021

MARK INFORMATION
Standard Character Claim  No  Mark Drawing Type  2 - AN ILLUSTRATION DRAWING WITHOUT ANY WORD(S)/ LETTER(S)  Description of the Mark  The mark consists of a structure similar to the letter "A" whereby a left and right segment are joined to form an isosceles triangle without a base segment. The structure differs from the letter "A" in that the middle segment's right end is the only point connected to the structure. The middle segment's right end is connected to the structure's right segment halfway up the interior side. The middle segment angles downward from the connection point with the right segment parallel to the structure's left segment. The middle segment's left-end stops at the bottom-most middle point between the structure's left and right segments. Barring points of connection and angled endpoints, the thickness of the segments is uniform and proportional to the height of the overall structure. The aforementioned proportional relationship is a segment thickness equal to approximately 30% of structure height. The bottom of the structure is flat, such that the edges on the ends of the segments are parallel. The apex of the structure is flattened, such that the resultant flat top occurs at point 5% below what would otherwise be the unflattened apex. The apex angle of the triangular structure is approximately 65 degrees, and the base angles are approximately 57.5 degrees.
